Contents

PART I MOMENTUM TRANSPORT

Chapter 1 Viscosity and the Mechanism of Momentum Transport **3**

*§1.1 Newton's Law of Viscosity 3
**Example 1.1–1. Calculation of Momentum Flux*, 7

*§1.2 Non-Newtonian Fluids 10

*§1.3 Pressure and Temperature Dependence of Viscosity 15
**Example 1.3–1. Estimation of Viscosity from Critical Properties*, 18
**Example 1.3–2. Effect of Pressure on Gas Viscosity*, 19

§1.4 Theory of Viscosity of Gases at Low Density 19
Example 1.4–1. Computation of the Viscosity of a Gas at Low Density, 25
Example 1.4–2. Prediction of the Viscosity of a Gas Mixture at Low Density, 25

§1.5 Theory of Viscosity of Liquids 26
Example 1.5–1. Estimation of the Viscosity of a Pure Liquid, 29

Chapter 2 Velocity Distributions in Laminar Flow **34**

*§2.1 Shell Momentum Balances: Boundary Conditions 35

*§2.2 Flow of a Falling Film 37
**Example 2.2–1. Calculation of Film Velocity*, 41
Example 2.2–2. Falling Film with Variable Viscosity, 41

*§2.3 Flow through a Circular Tube 42
*Example 2.3–1. Determination of Viscosity from Capillary Flow Data, 48
Example 2.3–2. Bingham Flow in a Circular Tube, 48
*§2.4 Flow through an Annulus 51
§2.5 Adjacent Flow of Two Immiscible Fluids 54
*§2.6 Creeping Flow Around a Solid Sphere 56
*Example 2.6–1. Determination of Viscosity from Terminal Velocity of a Falling Sphere, 60

Chapter 3 The Equations of Change for Isothermal Systems 71

*§3.1 The Equation of Continuity 74
*§3.2 The Equation of Motion 76
§3.3 The Equation of Mechanical Energy 81
*§3.4 The Equations of Change in Curvilinear Coordinates 82
*§3.5 Use of the Equations of Change to Set Up Steady Flow Problems 92
*Example 3.5–1. Tangential Annular Flow of a Newtonian Fluid, 94
*Example 3.5–2. Shape of the Surface of a Rotating Liquid, 96
Example 3.5–3. Torque Relationships and Velocity Distribution in the Cone-and-Plate Viscometer, 98
§3.6 The Equations of Change for Incompressible Non-Newtonian Flow 101
Example 3.6–1. Tangential Annular Flow of a Bingham Plastic, 104
Example 3.6–2. Components of the Momentum Flux Tensor For Non-Newtonian Radial Flow between Two Parallel Disks, 106
*§3.7 Dimensional Analysis of the Equations of Change 107
*Example 3.7–1. Prediction of Vortex Depth in an Agitated Tank, 108

Chapter 4 Velocity Distributions with More Than One Independent Variable 123

*§4.1 Unsteady Viscous Flow 123
*Example 4.1–1. Flow Near a Wall Suddenly Set in Motion, 124
Example 4.1–2. Unsteady Laminar Flow in a Circular Tube, 126
§4.2 Steady Viscous Flow With Two Nonvanishing Velocity Components: The Stream Function 130
Example 4.2–1. "Creeping Flow" Around a Sphere, 132

§4.3 Steady Two-Dimensional Potential Flow 133
Example 4.3–1. Ideal Flow Around a Cylinder, 136
Example 4.3–2. Flow into a Rectangular Channel, 138
§4.4 Boundary-Layer Theory 140
Example 4.4–1. Flow Near a Wall Suddenly Set in Motion, 140
Example 4.4–2. Flow Near the Leading Edge of a Flat Plate, 142

Chapter 5 Velocity Distributions in Turbulent Flow 153

*§5.1 Fluctuations and Time-Smoothed Quantities 154
*§5.2 Time-Smoothing of the Equations of Change for an Incompressible Fluid 158
*§5.3 Semiempirical Expressions for the Reynolds Stresses 160
**Example 5.3–1. Derivation of the Logarithmic Distribution Law for Tube Flow (Far from Wall)*, 161
**Example 5.3–2. Velocity Distribution for Tube Flow (Near Wall)*, 163
**Example 5.3–3. Relative Magnitude of Molecular and Eddy Viscosity*, 165
§5.4 The Second-Order Correlation Tensor and Its Propagation (the von Kármán-Howarth Equation) 166
Example 5.4–1. Decay of Turbulence Behind a Grid, 173

Chapter 6 Interphase Transport in Isothermal Systems 180

*§6.1 Definition of Friction Factors 181
*§6.2 Friction Factors for Flow in Tubes 183
**Example 6.2–1. Pressure Drop Required for a Given Flow Rate*, 188
**Example 6.2–2. Flow Rate for a Given Pressure Drop*, 189
*§6.3 Friction Factors for Flow Around Spheres 190
**Example 6.3–1. Determination of Diameter of a Falling Sphere*, 194
§6.4 Friction Factors for Packed Columns 196

Chapter 7 Macroscopic Balances for Isothermal Systems 208

*§7.1 The Macroscopic Mass Balance 209
*§7.2 The Macroscopic Momentum Balance 210
*§7.3 The Macroscopic Mechanical Energy Balances (Bernoulli equation) 211
Example 7.3–1. Derivation of Mechanical Energy Balance for Steady Incompressible Flow, 213
*§7.4 Estimation of the Friction Loss 214
**Example 7.4–1. Power Requirements for Pipe-Line Flow*, 217

*§7.5 Use of the Macroscopic Balances to Set Up Steady Flow Problems 219
*Example 7.5–1. Pressure Rise and Friction Loss in a Sudden Expansion, 219
*Example 7.5–2. Performance of a Liquid-Liquid Ejector, 220
*Example 7.5–3. Thrust on a Pipe Bend, 222
*Example 7.5–4. Isothermal Flow of a Liquid through an Orifice, 224
§7.6 Use of the Macroscopic Balances to Set Up Unsteady Flow Problems 226
Example 7.6–1. Efflux Time for Flow from a Funnel, 226
Example 7.6–2. Oscillation of a Damped Manometer, 229

PART II ENERGY TRANSPORT

Chapter 8 Thermal Conductivity and the Mechanism of Energy Transport 243

*§8.1 Fourier's Law of Heat Conduction 244
*Example 8.1–1. Measurement of Thermal Conductivity, 247
*§8.2 Temperature and Pressure Dependence of Thermal Conductivity in Gases and Liquids 249
*Example 8.2–1. Effect of Pressure on Thermal Conductivity, 251
§8.3 Theory of Thermal Conductivity of Gases at Low Density 253
Example 8.3–1. Computation of the Thermal Conductivity of a Monatomic Gas at Low Density, 258
Example 8.3–2. Estimation of the Thermal Conductivity of a Polyatomic Gas at Low Density, 258
Example 8.3–3. Prediction of the Thermal Conductivity of a Gas Mixture at Low Density, 259
§8.4 Theory of Thermal Conductivity of Liquids 260
Example 8.4–1. Prediction of the Thermal Conductivity of a Liquid, 261
§8.5 Thermal Conductivity of Solids 262

Chapter 9 Temperature Distributions in Solids and in Laminar Flow 265

*§9.1 Shell Energy Balances; Boundary Conditions 266
*§9.2 Heat Conduction with an Electrical Heat Source 267
*Example 9.2–1. Voltage Required for a Given Temperature Rise in a Wire Heated by an Electric Current, 271
Example 9.2–2. Heating of an Electric Wire with Temperature-Dependent Electrical and Thermal Conductivity, 272

§9.3 Heat Conduction with a Nuclear Heat Source 274
*§9.4 Heat Conduction with a Viscous Heat Source 276
§9.5 Heat Conduction with a Chemical Heat Source 279
*§9.6 Heat Conduction through Composite Walls: Addition of Resistances 283
*Example 9.6–1. Composite Cylindrical Walls, 286
§9.7 Heat Conduction in a Cooling Fin 288
Example 9.7–1. Error in Thermocouple Measurement, 290
*§9.8 Forced Convection 291
*§9.9 Free Convection 297

Chapter 10 The Equations of Change for Nonisothermal Systems 310

*§10.1 The Equations of Energy 311
*§10.2 The Energy Equation in Curvilinear Coordinates 317
*§10.3 The Equations of Motion for Forced and Free Convection in Nonisothermal Flow 317
*§10.4 Summary of the Equations of Change 321
*§10.5 Use of the Equations of Change to Set Up Steady-State Heat Transfer Problems 321
*Example 10.5–1. Tangential Flow in an Annulus with Viscous Heat Generation, 325
*Example 10.5–2. Steady Flow of a Nonisothermal Film, 326
*Example 10.5–3. Transpiration Cooling, 328
Example 10.5–4. Free-Convection Heat Transfer from a Vertical Plate, 330
Example 10.5–5. One-Dimensional Compressible Flow: Velocity, Temperature, and Pressure Gradients in a Stationary Shock Wave, 333
*Example 10.5–6. Adiabatic Frictionless Processes in an Ideal Gas, 337
*§10.6 Dimensional Analysis of the Equations of Change 338
*Example 10.6–1. Forced-Convection Heat Transfer in an Agitated Tank, 339
*Example 10.6–2. Surface Temperature of an Electric Heating Coil, 340

Chapter 11 Temperature Distributions with More Than One Independent Variable 352

*§11.1 Unsteady Heat Conduction in Solids 352
*Example 11.1–1. Heating of a Semi-Infinite Slab, 353
*Example 11.1–2. Heating of a Finite Slab, 354
Example 11.1–3. Cooling of a Sphere in Contact with a Well-Stirred Fluid, 357

§11.2 Steady Heat Conduction in Laminar Flow of a Viscous Fluid 361
Example 11.2–1: Laminar Tube Flow with Constant Heat Flux at Wall, 362
Example 11.2–2. Laminar Tube Flow with Constant Heat Flux at Wall: Asymptotic Solution for Small Distances, 363

§11.3 Steady Two-Dimensional Potential Flow of Heat in Solids 364
Example 11.3–1. Temperature Distribution in a Wall, 365

§11.4 Boundary-Layer Theory 366
Example 11.4–1. Heat Transfer in Forced-Convection Laminar Flow along a Heated Flat Plate, 367

Chapter 12 Temperature Distributions in Turbulent Flow 375

*§12.1 Temperature Fluctuations and the Time-Smoothed Temperature 375

*§12.2 Time-Smoothing the Energy Equation 377

*§12.3 Semiempirical Expressions for the Turbulent Energy Flux 379
**Example 12.3–1. Temperature Profiles in Steady Turbulent Flow in Smooth Circular Tubes*, 380

§12.4 The Double Temperature Correlation and Its Propagation: The Corrsin Equation 384
Example 12.4–1. Decay Equation for the Double Temperature Correlation, 386

Chapter 13 Interphase Transport in Nonisothermal Systems 389

*§13.1 Definition of the Heat-Transfer Coefficient 390
**Example 13.1–1. Calculation of Heat-Transfer Coefficients from Experimental Data*, 394

*§13.2 Heat-Transfer Coefficients for Forced Convection in Tubes 396
**Example 13.2–1. Design of a Tubular Heater*, 405

*§13.3 Heat-Transfer Coefficients for Forced Convection around Submerged Objects 407

§13.4 Heat-Transfer Coefficients for Forced Convection through Packed Beds 411

*§13.5 Heat-Transfer Coefficients for Free Convection 412
**Example 13.5–1. Heat Loss by Free Convection from a Horizontal Pipe*, 414

§13.6 Heat-Transfer Coefficients for Condensation of Pure Vapors on Solid Surfaces 415
Example 13.6–1. Condensation of Steam on a Vertical Surface, 418

Chapter 14 Energy Transport by Radiation 426

*§14.1 The Spectrum of Electromagnetic Radiation 427

*§14.2 Absorption and Emission at Solid Surfaces 429

*§14.3 Planck's Distribution Law, Wien's Displacement Law, and the Stefan-Boltzmann Law 433
**Example 14.3–1. Temperature and Radiant-Energy Emission of the Sun*, 437

*§14.4 Direct Radiation between Black Bodies in Vacuo at Different Temperatures 437
**Example 14.4–1. Estimation of the Solar Constant*, 443
**Example 14.4–2. Radiant Heat Transfer between Disks*, 444

*§14.5 Radiation between Nonblack Bodies at Different Temperatures 445
**Example 14.5–1. Radiation Shields*, 446
**Example 14.5–2. Radiation and Free-Convection Heat Losses from a Horizontal Pipe*, 448
Example 14.5–3. Combined Radiation and Convection, 448

§14.6 Radiant Energy Transport in Absorbing Media 449
Example 14.6–1. Absorption of a Monochromatic Radiant Beam, 451

Chapter 15 Macroscopic Balances for Nonisothermal Systems 456

*§15.1 The Macroscopic Energy Balance 456

*§15.2 The Macroscopic Mechanical Energy Balance (Bernoulli Equation) 460

*§15.3 Summary of the Macroscopic Balances for Pure Fluids 462

*§15.4 Use of the Macroscopic Balances for Solving Steady-State Problems 463
**Example 15.4–1. The Cooling of an Ideal Gas*, 463
**Example 15.4–2. Parallel- or Counter-Flow Heat Exchangers*, 465
**Example 15.4–3. Power Requirements for Pumping a Compressible Fluid through a Long Pipe*, 467
Example 15.4–4. Mixing of Two Ideal-Gas Streams, 470
**Example 15.4–5. Flow of Compressible Fluids through Head Meters*, 471

§15.5 Use of the Macroscopic Balances for Solving Unsteady-State Problems 473
Example 15.5–1. Heating of a Liquid in an Agitated Tank, 473
Example 15.5–2. Operation of a Simple Temperature Controller, 476
Example 15.5–3. Free Batch Expansion of a Compressible Fluid, 480

PART III MASS TRANSPORT

Chapter 16 Diffusivity and the Mechanisms of Mass Transport 495

*§16.1 Definitions of Concentrations, Velocities, and Mass Fluxes 496
Example 16.1–1. Relations among the Molar Fluxes, 501

*§16.2 Fick's Law of Diffusion 502

*§16.3 Temperature and Pressure Dependence of Mass Diffusivity 504
**Example 16.3–1. Estimation of Mass Diffusivity at Low Density*, 507
**Example 16.3–2. Estimation of Mass Diffusivity at High Density*, 507

§16.4 Theory of Ordinary Diffusion in Gases at Low Density 508
Example 16.4–1. Computation of Mass Diffusivity at Low Density, 512

§16.5 Theories of Ordinary Diffusion in Liquids 513
Example 16.5–1. Estimation of Mass Diffusivity for a Binary Liquid Mixture, 515

Chapter 17 Concentration Distributions in Solids and in Laminar Flow 519

*§17.1 Shell Mass Balances: Boundary Conditions 521

*§17.2 Diffusion Through a Stagnant Gas Film 522
**Example 17.2–1. Determination of Diffusivity*, 526
Example 17.2–2. Diffusion Through a Nonisothermal Spherical Film, 527

*§17.3 Diffusion with Heterogeneous Chemical Reaction 529
**Example 17.3–1. Diffusion with Slow Heterogeneous Reaction*, 531

*§17.4 Diffusion with Homogeneous Chemical Reaction 532
**Example 17.4–1. Gas Absorption with Chemical Reaction in an Agitated Tank*, 534

*§17.5 Diffusion into a Falling Liquid Film: Forced-Convection Mass Transfer 537
**Example 17.5–1. Gas Absorption from Rising Bubbles*, 541

§17.6 Diffusion and Chemical Reaction Inside a Porous Catalyst: the "Effectiveness Factor" 542

Chapter 18 The Equations of Change for Multicomponent Systems 554

*§18.1 The Equations of Continuity for a Binary Mixture 555

*§18.2 The Equation of Continuity of A in Curvilinear Coordinates 558

§18.3 The Multicomponent Equations of Change in Terms of the Fluxes 560

§18.4 The Multicomponent Fluxes in Terms of the Transport Properties 563

§18.5 Use of the Equations of Change to Set Up Diffusion Problems 572
Example 18.5–1. Simultaneous Heat and Mass Transfer, 572
Example 18.5–2. Thermal Diffusion, 574
Example 18.5–3. Pressure Diffusion, 575
Example 18.5–4. Forced Diffusion, 577
Example 18.5–5. Three-Component Ordinary Diffusion with Heterogeneous Chemical Reaction, 578

*§18.6 Dimensional Analysis of the Equations of Change for a Binary Isothermal Fluid Mixture 580
**Example 18.6–1. Blending of Miscible Fluids*, 582

Chapter 19 Concentration Distributions with More Than One Independent Variable 592

§19.1 Unsteady Diffusion 594
Example 19.1–1. Unsteady-State Evaporation, 594
Example 19.1–2. Unsteady Diffusion with First-Order Reaction, 598
Example 19.1–3. Gas Absorption with Rapid Chemical Reaction, 599

§19.2 Boundary-Layer Theory: von Kármán Approximate Method 601
Example 19.2–1. Unsteady Evaporation into a Multicomponent Mixture, 602
Example 19.2–2. Diffusion and Chemical Reaction in Isothermal Laminar Flow Along a Soluble Flat Plate, 605

§19.3 Boundary-Layer Theory: Exact Solutions for Simultaneous Heat, Mass, and Momentum Transfer 608
Example 19.3–1. Calculation of Mass-Transfer Rate, 619

Chapter 20 Concentration Distributions in Turbulent Flow 626

*§20.1 Concentration Fluctuations and the Time-Smoothed Concentration 626

*§20.2 Time-Smoothing of the Equation of Continuity of A 627

§20.3 Semiempirical Expressions for the Turbulent Mass Flux 629
Example 20.3–1. Concentration Profiles in Turbulent Flow in Smooth Circular Tubes, 630
Example 20.3–2. Evaporation of Ammonia in a Wetted Wall Column, 630

§20.4 The Double Concentration Correlation and Its Propagation: the Corrsin Equation 633

Chapter 21 Interphase Transport in Multicomponent Systems 636

*§21.1 Definition of Binary Mass-Transfer Coefficients in One Phase 637

*§21.2 Correlations of Binary Mass-Transfer Coefficients in One Phase at Low Mass-Transfer Rates 642

**Example 21.2–1. Evaporation of a Freely Falling Drop*, 648

**Example 21.2–2. The Wet-and-Dry-Bulb Psychrometer*, 649

*§21.3 Definition of Binary Mass-Transfer Coefficients in Two Phases at Low Mass-Transfer Rates 652

*§21.4 Definition of the Transfer Coefficients for High Mass-Transfer Rates 656

§21.5 Transfer Coefficients at High Mass-Transfer Rates: Film Theory 658

Example 21.5–1. Rapid Evaporation of a Pure Liquid, 666

Example 21.5–2. Use of Correction Factors in Droplet Evaporation, 667

Example 21.5–3. Wet-Bulb Performance at High Mass-Transfer Rates, 667

§21.6 Transfer Coefficients at High Mass-Transfer Rates: Penetration Theory 668

§21.7 Transfer Coefficients at High Mass-Transfer Rates: Boundary-Layer Theory 672

Example 21.7–1. Rapid Evaporation from a Plane Surface, 676

§21.8 Transfer Coefficients in Multicomponent Systems 676

Example 21.8–1. Mass Transfer in a Fixed-Bed Catalytic Reactor, 678

Chapter 22 Macroscopic Balances for Multicomponent Systems 685

*§22.1 The Macroscopic Mass Balances 686

*§22.2 The Macroscopic Momentum Balance 688

*§22.3 The Macroscopic Energy Balance 689

*§22.4 The Macroscopic Mechanical Energy Balance 689

*§22.5 Use of the Macroscopic Balances to Solve Steady-State Problems 690

**Example 22.5–1. Energy Balance for a Sulfur Dioxide Converter*, 690

**Example 22.5–2. Height of a Packed-Tower Absorber*, 692

Example 22.5–3. Expansion of a Reactive Gas Mixture through a Frictionless Adiabatic Nozzle, 697

§22.6 Use of the Macroscopic Balances for Solving Unsteady-State Problems 700

Example 22.6–1. Start-Up of a Chemical Reactor, 700

Example 22.6–2. Unsteady Operation of a Packed Column, 702

Postface 712

Appendix A Summary of Vector and Tensor Notation 715

§A.1 Vector Operations from a Geometrical Viewpoint 716

§A.2 Vector Operations from an Analytical Viewpoint 719
Example A.2-1. Proof of a Vector Identity, 722

§A.3 The Vector Differential Operations 723

§A.4 Second Order Tensors 726
Example A.4-1. Proof of a Tensor Identity, 731

§A.5 Integral Operations for Vectors and Tensors 731

§A.6 Vector and Tensor Components in Curvilinear Coordinates 733
Example A.6-1. Transformation Characteristics of Vector and Tensor Products, 736

§A.7 Differential Operations in Curvilinear Coordinates 736
Example A.7-1. Derivation of Several Differential Operations in Cylindrical Coordinates, 737

Appendix B Tables for Prediction of Transport Properties 743

§B.1 Intermolecular Force Parameters and Critical Properties 744

§B.2 Functions for Prediction of Transport Properties of Gases at Low Densities 746

Appendix C Constants and Conversion Factors 747

§C.1 Mathematical Constants 747

§C.2 Physical Constants 747

§C.3 Conversion Factors 748

Notation 757
