

CONTENTS

PREFACE	v
LIST OF MOST IMPORTANT SYMBOLS	xi
CHAPTER 1. BASIC CONCEPTS	1
1. Ferroelectrics and antiferroelectrics	1
2. Broken symmetry and soft modes	7
3. Soft mode concept and lattice dynamics	11
4. Soft modes in 'displacive' and 'order-disorder' systems	15
CHAPTER 2. THERMODYNAMICS OF FERROELECTRICS AND ANTIFERROELECTRICS	19
1. General considerations	19
1.1. Introduction	19
1.2. Landau theory and soft modes	21
2. Equilibrium properties	25
2.1. Ferroelectrics	25
2.2. Correlation of polarization fluctuations in space	34
2.3. Antiferroelectrics	36
2.4. Kittel's model of antiferroelectricity	38
2.5. Improper ferroelectrics	45
3. Dynamic properties	50
3.1. Ferroelectrics	50
3.2. Polarization fluctuations in space and time	54
3.3. Antiferroelectrics	56
3.4. Improper ferroelectrics	58
4. Bridge between thermodynamic theory and microscopic treatments	60
CHAPTER 3. SYMMETRY, PHASE TRANSITIONS AND SOFT MODES	62
1. Introduction	62

2. Landau's theory of second order structural phase transitions	63
3. Curie principle and the relation between paraelectric, ferroelectric and antiferroelectric point groups	72
4. Symmetry of ferroelectric and antiferroelectric soft modes	81
 CHAPTER 4. SOFT PHONONS IN DISPLACIVE FERROELECTRICS AND ANTIFERROELECTRICS	
1. Introduction	97
2. Quasi-harmonic approximation	99
3. MFA treatment of a single mode model	106
3.1. Static properties.	107
3.2. Dynamic properties	110
4. Damping of the soft phonon and the central mode	117
4.1. Damped harmonic oscillator with memory	118
 CHAPTER 5. DYNAMICS OF ORDER-DISORDER TYPE FERROELECTRICS AND ANTIFERROELECTRICS	
1. Introduction	125
2. Pseudo-spin formalism and Hamiltonian	125
3. Dynamics of ferroelectrics and antiferroelectrics with a symmetric double minimum type single particle potential	131
3.1. MFA for ferroelectrics and antiferroelectrics	131
3.2. Free precession of pseudo-spins (RPA)	135
3.3. Bloch equations for pseudo-spin motion.	144
3.4. Stochastic approach to pseudo-spin motion and the central mode	148
3.5. Order parameter fluctuations: Dynamic Ising model	152
3.6. Relation between the pseudo-spin and the Slater-Takagi model of KD_2PO_4 crystals	154
4. Dynamics of order-disorder systems with an asymmetric double minimum type single particle potential	163
5. Pseudo-spin-phonon coupling	169
 CHAPTER 6. DIELECTRIC DISPERSION AND ABSORPTION	
1. Dielectric relaxation	175
2. Effect of hydrostatic pressure on the dielectric properties	187
3. Critical behaviour of ferroelectrics and antiferroelectrics	199
 CHAPTER 7. NEUTRON SCATTERING	
1. Introduction and experimental technique	204
2. Coherent neutron scattering by phonons and pseudo-spin waves	206
3. Experimental results	210

CONTENTS

ix

3.1. Soft modes and dispersion relations	210
3.2. 'Soft' mode eigenvector determination and 'dynamic' crystallography	215
CHAPTER 8. LIGHT SCATTERING	218
1. Introduction and experimental methods	218
2. Rayleigh scattering and critical opalescence	223
3. Raman and Brillouin scattering	230
4. Examples of soft mode studies by Raman and Brillouin scattering	238
CHAPTER 9. MAGNETIC RESONANCE	246
1. Introduction	246
2. NMR and NQR	247
2.1. Deuteron magnetic resonance in KD_2PO_4 type crystals	249
2.2. O^{17} nuclear quadrupole resonance in KH_2PO_4	257
2.3. Cs^{133} magnetic resonance in CsD_2AsO_4	259
2.4. As^{75} spectrum in ferroelectric KH_2AsO_4 and antiferroelectric $\text{NH}_4\text{H}_2\text{AsO}_4$	261
2.5. Na^{23} , Nb^{93} , Sr^{87} and $\text{Ti}^{47(49)}$ resonance in perovskite-type crystals	267
3. EPR in SrTiO_3 and KH_2AsO_4	267
APPENDIX A	281
APPENDIX B	282
