CONTENTS

CHAPTER 1 THERMODYNAMIC PROPERTIES OF A GAS

1–1 Principles of Thermodynamics 1
1–2 Thermodynamic Properties of a Gas 9

CHAPTER 2 SHOCK HYDRODYNAMICS

2–1 Normal Shock Waves 14
2–2 Normal Shocks in an Ideal Gas 22
2–3 Weak Shock Waves 30
2–4 Oblique Shocks 31
2–5 Rarefaction Waves (Corner Flow) 37
2–6 Examples 38

CHAPTER 3 CONTINUUM HYDRODYNAMICS

3–1 The Equations of Motion 45
3–2 Constants of the Motion 51
3–3 Sound Waves 56
3–4 One-Dimensional Channel Flow 61
3–5 The Free Expansion of a Gas 64

CHAPTER 4 ATOMIC AND MOLECULAR PHYSICS

4–1 Introduction 68
4–2 The Bohr Atom 69
4–3 The Schrödinger Equation 72
4–4 Spectroscopic Notation 79
4–5 The Molecular Potential Function 82
4–6 The H_2^+ Molecule 83
4–7 Molecular Electronic States 85
4–8 Vibration and Rotation 96
4–9 Molecular Spectra 109
4–10 van der Waals Forces 115
4–11 Franck-Condon Principle 117
4–12 Introduction to Atomic Collisions 119
4–13 The Concept of a Cross Section 120
4–14 Photon Interactions with Photons and Electrons . . . 122
4–15 Electron-Electron Scattering 124
4–16 Photon-Atom Scattering 125
4–17 Bound-Bound Processes 127

4–18 Bound-Free Processes 131
4–19 Free-Free Processes 137
4–20 Electron-Atom Elastic Scattering 140
4–21 Electron-Atom Inelastic Scattering 142
4–22 Auger Emission 145
4–23 Three-Body Collisions Involving Electrons 146
4–24 Elastic Scattering of Atoms and Molecules 147
4–25 The Adiabatic Principle 150
4–26 Inelastic Scattering of Atoms and Molecules 152
4–27 Charge Transfer 156
4–28 Formation of Molecules and Molecular Ions 159
4–29 Photon Interactions with Molecules 164
4–30 Electron Collisions with Molecules and Molecular Ions . 165

CHAPTER 5 EQUATION OF STATE

5–1 The Maxwell-Boltzmann Distribution Function . . . 176
5–2 The Canonical Ensemble and the Density Function . . 182
5–3 The Equilibrium Distribution Function 186
5–4 The Monatomic Gas 193
5–5 The Diatomic Gas 212
5–6 Electromagnetic Radiation 222
5–7 The Fermi-Thomas Equation of State 225

CHAPTER 6. KINETIC THEORY OF GASES

6–1 General Considerations 235
6–2 The Molecular Distribution Function 237
6–3 Some Elementary Concepts 238
6–4 The Boltzmann Equation 241
6–5 Evaluation of the Collision Term 242
6–6 Boltzmann Equation for a Mixture of Gases 245
6–7 The Boltzmann *H*-Theorem 245
6–8 A Simple Problem in Transport Theory 249
6–9 Application to Diffusion Through a Slab 253
6–10 The Coefficient of Diffusion 255
6–11 Equilibrium Ionization in a Gas 256

CHAPTER 7 GENERAL THEORY OF TRANSPORT PROCESSES AND HYDRODYNAMICS

7–1 General Theorem 262
7–2 Limiting Case for a Maxwell Distribution 265
7–3 The Method of Enskog and Chapman 266
7–4 Solution of the Lowest-Order Equation 267
7–5 Solutions of the Transport Equation 269

7–6 Application to Transport Theory 271
7–7 Hydrodynamic and Thermodynamic Relations 272
7–8 Damping of Sound Waves 274
7–9 Solution of Integral Equation; Variational Principle . . 276
7–10 Calculation of the Viscosity and Thermal Conductivity . 278

CHAPTER 8 DISSOCIATION AND IONIZATION IN A GAS

8–1 Reaction Rates 282
8–2 Photoionization and Detachment 290
8–3 Nonradiative Recombination and Attachment 292
8–4 Molecular Dissociation and Recombination 295
8–5 Hydrodynamic Equations for a Dissociating Gas . . . 297
8–6 Application to a Rocket Nozzle 299
8–7 A Partially Ionized Gas 301
8–8 Electrical Conductivity 304
8–9 Refractive Index of an Ionized Gas 306

CHAPTER 9 KINETIC THEORY OF TRANSPORT PROCESSES IN MULTICOMPONENT GASES

9–1 Preliminary Discussion 309
9–2 The Collision Integrals 313
9–3 Expansion of the Boltzmann Function 317
9–4 The First-Order Equation 318
9–5 The Transport Equations 321
9–6 Thermal Diffusion in a Two-Component System . . . 325

CHAPTER 10 RADIATION TRANSPORT THEORY

10–1 Local Thermodynamic Equilibrium 329
10–2 Macroscopic Quantities 332
10–3 The Absorption, Emission, and Scattering Processes . . 334
10–4 The Equation for Energy Balance 339
10–5 The Diffusion Approximation 342
10–6 The Emission Approximation 343
10–7 Cold-Material Approximation 346

CHAPTER 11 OPACITY

11–1 Calculational Procedure 350
11–2 Statistical Mechanics 351
11–3 The Line Opacity 352
11–4 The Continuous Opacity 366
11–5 Bounds on the Opacity 371
11–6 Emissivity of Air 373
11–7 Bibliography 387

CHAPTER 12 RADIATION TRANSPORT APPLICATIONS

12–1 The Optical Depth 396
12–2 The Milne Problem 398
12–3 Similarity Solutions in the Diffusion Approximation . . 400
12–4 The Constant Flux Approximation 401
12–5 Radiation Damping of Wave Motion 404
12–6 Equations of Motion with Radiation Flow 407
12–7 Shock Structure with Radiation 412
12–8 Nonequilibrium Radiation in Shocks 418
12–9 Role of Free Electrons 423

CHAPTER 13 SHOCK-FRONT STRUCTURE

13–1 The Shock Front as a Discontinuity 428
13–2 The Shock Front with Heat Conduction and Viscosity . 433
13–3 A Hypersonic Shock Front in Argon 437
13–4 A Hypersonic Shock Front in Air 457

APPENDIX A. SPHERICAL SHOCK WAVES INCLUDING HEAT CONDUCTION 466

APPENDIX B. MATRIX ELEMENTS AND OSCILLATOR STRENGTHS

B–1 Oscillator Strengths for Degenerate Levels . . 470
B–2 Dipole Transitions in a Coulomb Field . . . 471
B–3 Nonhydrogenic Wave Functions 474
B–4 Electronic Bands in Molecules 475

APPENDIX C. THE MORSE FUNCTION 480

APPENDIX D. DIFFERENTIAL SCATTERING CROSS SECTIONS . . 483

APPENDIX E. CHEMICAL EQUILIBRIUM 489

APPENDIX F. EVALUATION OF INTEGRALS FOR CHAPMAN-ENSKOG THEORY 493

APPENDIX G. VIBRATIONAL RELAXATION IN SHOCK FRONTS . . 495

APPENDIX H. PROPERTIES OF THE INTEGROEXPONENTIAL FUNCTIONS 498

APPENDIX I. CONSTANTS AND CONVERSION FACTORS 500

INDEX 507
