EDITOR'S PREFACE	v
PREFACE	vi
CONTENTS	vii
LIST OF MOST IMPORTANT SYMBOLS	x
CHAPTER 1. INTRODUCTION	1
1. Recent history of magnetostatics	1
2. Recent history of ferromagnetism	2
3. Outline of the book	5
4. Units	6
5. Notation and terminology	10
CHAPTER 2. BASIC MAGNETOSTATIC CONCEPTS	12
1. Poles and Amperian currents	12
2. Conduction currents	13
3. Magnetized matter	18
3.1 Transformations of the flux density and the potentials	19
3.2 Potentials and field vectors at internal points.	21
3.3 Transformations of the force and torque	28
4. Formal theory	28
5. Uniformly magnetized ellipsoid	33
6. Induced electromotive forces	33
7. Microscopic concepts	37
7.1 Atomic moments	37
7.2 The local field	38
CHAPTER 3. GENERAL THEOREMS	43
1. Reciprocity theorems	43
1.1 Current distributions	45
1.2 Magnetization distributions	46

1.3	Current distribution and magnetization distribution	48
1.4	Corollaries for single distributions	49
2.	Uniformly magnetized body	49
2.1	General relations	50
2.2	Energy expressions	51
3.	Minimization theorems	53
 CHAPTER 4. ENERGY RELATIONS		 59
1.	Permanent dipoles	59
2.	Small magnet with variable moment	63
3.	Rigid bodies	71
4.	Deformable bodies	74
 CHAPTER 5. CONVENTIONAL FERROMAGNETIC PROPERTIES		 80
1.	Empirical properties: the B - H curve	80
2.	Demagnetizing factors; gaps	83
3.	The linear approximation; infinite permeability	85
4.	Mixtures	87
 CHAPTER 6. UNIFORM SPONTANEOUS MAGNETIZATION		 93
1.	Domains; single-domain particles	94
2.	Thermodynamic principles	96
3.	Magnetic forces	101
4.	Crystalline anisotropy	104
5.	Non-interacting single-domain particles	105
6.	Magnetic interactions	112
7.	Magnetostrictive forces	119
 CHAPTER 7. NON-UNIFORM SPONTANEOUS MAGNETIZATION; MICROMAGNETICS		 123
1.	Preliminary discussion	123
2.	Continuous magnetization with negligible exchange energy	125
3.	Effect of exchange forces	133
4.	Approximate methods	140
5.	The one-dimensional case	142

CONTENTS

ix

6. The interdomain wall	148
7. Magnetostrictive effects	151
CHAPTER 8. DOMAIN THEORY	154
1. Origin of the domain concept; experimental evidence	154
2. Theoretical rationalization of domains	156
3. Applications of domains	161
4. Summary of standard domain theory.	163
5. Assessment of domain theory	168
CHAPTER 9. DYNAMIC PROBLEMS	170
1. Equations of motion: classical approximation	171
2. Lagrangian formulation	174
3. Modes of precession	176
4. Spin waves; magnetostrictive interactions	181
5. Relation to static theory	184
6. Transient behaviour; switching times	185
