PREFACE	ix
---------	----

PART 1

Chapter I	The Work of Hilbert, Chapman, and Enskog	3
	Hilbert	6
	Enskog	7
	Chapman	9
	Chapman or Enskog	10
Chapter II	Comparison of the Chapman–Enskog Results with those of Earlier Theories	12
	Viscosity	12
	Heat Conduction	15
	Diffusion	17
	Thermal Diffusion	18
Chapter III	Application of Kinetic Theory to Determination of Intermolecular Forces	21
	Lennard–Jones	21
	The exp-6 potential	24
Chapter IV	Propagation of Sound in Monatomic Gases	33
	The Newton–Laplace theory	33
	Early kinetic-theory explanations of the speed of sound	35
	Absorption and dispersion	37
	Applications of the Burnett approximation	38
	Recent theories	40
Chapter V	Alternatives to the Chapman–Enskog Method, and Mathematical Problems	45
	Carleman’s results	47
	Grad’s method	49
	Results of Wild and Morgenstern	50
	Ikenberry and Truesdell	51
	Grad’s asymptotic theory	54

Chapter VI	Generalizations of the Kinetic Theory to Higher Densities	57
	Early results of Jäger and others	57
	The BBGKY equations	59
	Correlation formulas for transport coefficients	69
	Transport coefficients for the dense hard-sphere gas	72
	Discovery of the divergence	77
BIBLIOGRAPHY		81

PART 2

1	DAVID HILBERT: Foundations of the Kinetic Theory of Gases (from <i>Mathematische Annalen</i> , 1912).	89
2	SYDNEY CHAPMAN: The Kinetic Theory of Simple and Composite Monatomic Gases: Viscosity, Thermal Conduction, and Diffusion (from <i>Proceedings of the Royal Society of London</i> , 1916–17)	102
	Part I.—Outline of the Mathematical Method	103
	Part II.—Application to the Theory of the Mean-Free-Path Phenomena	109
	Part III.—Discussion of the Results in Various Special Cases	112
3	SYDNEY CHAPMAN and F. W. DOOTSON: A Note on Thermal Diffusion (from <i>Philosophical Magazine</i> , 1917)	120
4	DAVID ENSKOG: Kinetic Theory of Processes in Dilute Gases (translated from <i>Kinetische Theorie der Vorgänge in mässig verdünnten Gasen</i> , 1917)	125
	Introduction	125
	I. Fundamentals	127
	II. Processes in a simple gas	136
	III. Processes in a mixture of two diffusing gases	159
	IV. Numerical results	178
	V. Entropy and entropy transport to second approximation	190
	VI. Calculation of pressures to third approximation	196
	Appendix	207
5	DAVID ENSKOG: Kinetic Theory of Heat Conduction, Viscosity and Self-Diffusion in Compressed Gases and Liquids (translated from <i>Kungliga Svenska Vetenskapsakademiens Handlingar</i> , 1922)	226
6	SYDNEY CHAPMAN: The Kinetic Theory of Gases Fifty Years Ago (from <i>Lectures in Theoretical Physics</i> , Boulder, 1966)	260
	INDEX	273
