

Contents

Preface	v
-------------------	---

Chapter 1

Introduction to Real Gas Effects

1.1 Introduction	i
1.2 The Concept of a Real Gas	1
1.3 Real Gas Effects in Gas Dynamics	5
1.4 Availability and Validity of Property Tables	10
1.5 The Speed of Sound	14
1.6 List of Symbols	20
References	21

Chapter 2

Introduction to Aerothermochemical Analysis

2.1 Introduction	25
2.2 Equations of Change	26
2.3 Equations of State	29
2.4 Thermodynamic and Transport Properties	30
2.5 Dimensionless Parameters	30
2.6 List of Symbols	31

Chapter 3

Thermal and Caloric Equations of State

3.1 Introduction	33
3.2 The Partition Function	33

3.3	Thermodynamic Properties	35
3.4	Partition Functions for a Perfect Gas	37
3.5	Thermal Equation of State	44
3.6	Caloric Equation of State	46
3.7	Thermodynamic Equilibrium Condition	48
3.8	Approximate Equations	51
3.9	Double Ionization	54
3.10	List of Symbols	56
	References	58

Chapter 4

The Debye-Hückel Theory for Ionized Gases

4.1	Introduction	58
4.2	Fundamental Equations	59
4.3	Thermodynamic Properties	63
4.4	Evaluation of the Theory	66
4.5	The Debye Length	68
4.6	Magnitude of the Debye-Hückel Correction Term	71
4.7	Validity of the Debye-Hückel Theory at Higher Densities	74
4.8	List of Symbols	86
	References	88

Chapter 5

High Pressure Real Gas Effects

5.1	Introduction	91
5.2	High Pressure Effects	91
5.3	List of Symbols	94
	References	95

Chapter 6

Dissociation and Recombination

6.1	Introduction	97
6.2	Theoretical Predictions of Dissociation and Recombination Rates	99

6.3	Experimental Techniques for the Investigation of Heterogeneous Chemical Reactions	118
6.4	Applications	122
6.5	List of Symbols	128
	References	130

Chapter 7

Ionization and Neutralization

7.1	Introduction	135
7.2	Ionization Processes	135
7.3	Neutralization Processes	145
7.4	List of Symbols	158
	References	159
