

Contents

1. Silicon	1
1.1 Elemental Silicon	2
1.2 Silicon Metallurgy	3
1.3 Single-Crystal Growth	4
1.4 Mechanical Properties	6
1.4.1 Fracture Limit	6
1.4.2 Plastic Limit	6
2. Silicon Phases	8
2.1 Diamond-Cubic Silicon	8
2.2 Diamond-Hexagonal Silicon	8
2.3 Amorphous Silicon	10
2.3.1 Amorphous 1 (a_1)	10
2.3.2 Amorphous 0 (a_0)	13
3. Equilibrium Defects	15
3.1 Vacancies	16
3.2 Self-Interstitials	18
3.3 Vacancy-Self-Interstitial Pair	20
3.4 Stacking Faults	21
4. Impurities	25
4.1 Impurity Content	25
4.2 Oxygen	27
4.2.1 Thermal Donors	29
4.2.2 The New Thermal Donor	31
4.3 Oxygen Precipitates	31
5. Dopants	33
5.1 The Standard Theory	33
5.1.1 Electronic Properties	33
5.1.2 Equilibrium Properties	36
5.1.3 Transport Properties	38
5.2 Group V Donors	40

5.3	Group III Acceptors	41
5.3.1	Group III Acceptors as Shallow Centres	44
5.3.2	Group III Acceptors as Deep Centres	46
5.4	Generation–Recombination Phenomena	49
6.	Defect–Impurity Interactions	52
6.1	Defect Influence on Impurities	53
6.2	Impurity Influence on Defects	55
6.3	Impurity–Impurity Interactions	57
7.	The High Density Limit	59
7.1	Transition Metals	59
7.2	Substitutional Impurities	61
7.2.1	Clusters	62
7.2.2	Precipitation	63
7.3	General Correlations	64
7.3.1	Solubility and Segregation	64
7.3.2	Strain Entropy	65
8.	Surfaces and Interfaces	70
8.1	Amorphous SiO ₂	70
8.2	The Si-SiO ₂ Interface	71
8.3	Oxidation Kinetics	76
8.4	Surface Reconstructibility	78
9.	Gettering	81
9.1	External Gettering	82
9.2	Internal Gettering	85
9.3	Heavy-Metal Gettering	87
9.4	Gettering and Device Processing Architecture	91
10.	Device Processing	93
10.1	The MOS Structure	94
10.2	MOS Technology	96
10.3	A Look to the Future	101
