|  |    |
|--|----|
| ACKNOWLEDGEMENTS   | v  |
| 1. INTRODUCTION  | 1  |
| 2. SOUND PROPAGATION IN GASES  | 6  |
| 2.1 Propagation of sound wave in compressible fluid                            | 6  |
| 2.2 Thermodynamic development of sound velocity equation                       | 7  |
| 2.3 Correction of sound velocity measurement in gases to ideal gas state       | 8  |
| 2.4 Classical absorption of sound and its effect on measured velocity in gases | 10 |
| 2.5 Velocity of sound at high frequencies in gases—simple treatment            | 13 |
| 2.6 Absorption of sound at high frequencies—simple treatment                   | 18 |
| 2.7 Simple discussion of application to real systems                           | 22 |
| 2.8 General considerations on relaxation                                       | 24 |
| 2.9 Excitation of different degrees of freedom in parallel                     | 26 |
| 2.10 Excitation in series  | 27 |
| 2.11 Thermodynamic approach to the relaxation time                             | 29 |
| 2.12 Gas mixtures  | 30 |
| 3. MEASUREMENT OF VELOCITY AND ABSORPTION OF SOUND IN GASES                    | 33 |
| 3.1 Introduction   | 33 |
| 3.2 The ultrasonic interferometer  | 33 |
| 3.3 Resonance method of measuring sound absorption                             | 41 |
| 3.4 Direct method of measuring sound absorption                                | 42 |
| 3.5 Reverberation technique  | 44 |
| 3.6 General survey of experimental measurements                                | 46 |
| 4. OTHER METHODS FOR LOW-LYING VIBRATIONAL STATES                              | 51 |
| 4.1 Introduction   | 51 |
| 4.2 Shock waves  | 51 |
| 4.3 Impact tube method   | 59 |
| 4.4 Spectroscopic methods  | 63 |
| 4.5 Optic acoustic effect  | 64 |

# CONTENTS

|   |     |
|---|-----|
| 5. EXPERIMENTAL RESULTS FOR LOW-LYING ENERGY STATES               | 74  |
| 5.1 Introduction  | 74  |
| 5.2 Results on individual compounds                               | 77  |
| 6. THEORY OF ENERGY TRANSFER TO LOW-LYING STATES                  | 123 |
| 6.1 Introduction  | 123 |
| 6.2 Linear system: semiclassical treatment                        | 125 |
| 6.3 Linear system: quantum mechanical treatment                   | 129 |
| 6.4 Comparison of semiclassical and quantum mechanical treatments | 134 |
| 6.5 Three-dimensional encounters—semiclassical treatment          | 137 |
| 6.6 Three-dimensional encounters—quantum mechanical treatment     | 145 |
| 6.7 Refinement of intermolecular potential                        | 148 |
| 6.8 Polyatomic molecules  | 154 |
| 6.9 Comparison of basic theory with experiment                    | 158 |
| 6.10 Semi-empirical theories                                      | 164 |
| 7. ENERGY TRANSFER INVOLVING HIGHER ENERGY STATES                 | 170 |
| 7.1 Direct spectroscopic investigations                           | 170 |
| 7.2 Fluorescence stabilization in polyatomic molecules            | 172 |
| 7.3 Flash spectroscopy  | 178 |
| 7.4 Abnormally excited rotational levels                          | 182 |
| 7.5 Energy transfer in chemical kinetics                          | 184 |
