

CONTENTS

Preface	v
I. PHENOMENOLOGICAL THEORY OF SUPERCONDUCTIVITY	
1. Experimental Facts	1
2. Gorter-Casimir Two-Fluid Model	3
3. Electrodynamics of Superconductors	5
4. Ginzburg-Landau Theory of Superconductivity	13
5. Josephson Tunnelling	23
6. Influence of the Fluctuations	25
7. Type-II Superconductors	29
II. MICROSCOPIC THEORY OF SUPERCONDUCTIVITY	
8. The Cooper Instability of the Fermi Gas	46
9. Self-Consistent Field Method — Gor'kov Equations	48
10. Linear Response to a Magnetic Field	57
11. Microscopic Derivation of the Ginzburg-Landau Equations	63
12. Quasiclassical Approximation	67
13. Strong-Coupling Theory of Superconductivity	79
14. Spin Fluctuations in Superconductors	95
15. Triplet Pairing	100
Appendix	106

III. THEORY OF SUPERCONDUCTING ALLOYS

16. The Influence of Impurities on the Superconducting State	114
17. Influence of the Correlated Spins on the Critical Temperature of a Superconductor	127
18. Non-magnetic Localized States in Superconducting Alloys	134
19. Kondo Effect in Superconductors	144
20. Localization and Superconductivity	155
Appendix	166

IV. SUPERCONDUCTORS IN A MAGNETIC FIELD

21. Paramagnetic Effects in Superconductors	173
22. Critical Fields of a Superconductor	185
Appendix	195

V. SUPERCONDUCTIVITY AND MAGNETIC ORDER

23. Superconductivity and Ferromagnetism	203
24. Superconductivity and Antiferromagnetism	211
25. Magnetic Structures in Superconductors	224

VI. SUPERCONDUCTIVITY IN QUASI-ONE-DIMENSIONAL SYSTEMS

26. Superconductivity and Charge-Density-Waves	234
27. Coexistence Between Spin-Density-Waves and Superconductivity	239

VII. UNCONVENTIONAL SUPERCONDUCTIVITY

28. Non-Phononic Mechanisms	250
29. Heavy-Fermions Superconductivity	260
30. High-Temperature Superconductivity	278

Index	295
