<b>Chapter 1 Wave motion</b>	<b>1</b>
1.1 Simple harmonic motion	1
1.2 Travelling waves	4
1.2.1 <i>Representation of travelling waves</i>	4
1.3 The wave equation in one dimension	8
1.4 The wave equation in three dimensions	8
1.5 Stationary waves	11
1.5.1 <i>Stationary waves by separation of variables</i>	14
1.5.2 <i>Phase velocity and group velocity</i>	15
1.6 The electron as a wave	18
1.6.1 <i>The Einstein photoelectric equation</i>	18
1.6.2 <i>The de Broglie postulate</i>	20
1.6.3 <i>The dispersion of electron waves</i>	21
1.7 Heisenberg's uncertainty principle	22
1.8 The Schrödinger wave equation	29
1.8.1 <i>Interpretation and application of the Schrödinger wave equation</i>	31

---

<b>Chapter 2 Atomic structure</b>	<b>36</b>
2.1 Introduction	36
2.2 The Bohr theory	36
2.2.1 <i>Spectral lines</i>	41
2.2.2 <i>Discussion of the Bohr theory</i>	42
2.3 The wave mechanics of the hydrogen atom	44
2.3.1 <i>The angular function <math>\Theta\Phi</math></i>	47
2.3.2 <i>The radial function <math>R</math></i>	54
2.4 The complete solution	59
2.5 Angular momentum and electron spin	64
2.6 The Pauli exclusion principle	66
2.7 The electronic structure of free atoms	68

---

<b>Chapter 3 The structure of solids</b>	<b>78</b>
3.1 Introduction	78

3.2	Space lattices	78
3.3	Symmetry elements	79
3.4	Types of lattices and crystal structures	84
3.5	Miller indices	88
3.5.1	<i>Atom positions and crystal directions</i>	89
3.5.2	<i>Interplanar spacings</i>	91
3.6	Diffraction methods	91
3.6.1	<i>X-ray diffraction</i>	91
3.6.2	<i>Electron diffraction</i>	93
3.6.3	<i>Neutron diffraction</i>	94
3.7	The Bragg diffraction law	94
3.7.1	<i>Missing reflections</i>	97
3.8	The Laue equations	99
3.9	The reciprocal lattice	100
3.9.1	<i>The Ewald construction</i>	102
3.10	Wave-vector representation	105
3.11	X-ray diffraction methods	107

---

## Chapter 4 Crystal bonding 112

4.1	Introduction	112
4.2	The ionic bond	113
4.3	The van der Waals bond	121
4.4	The covalent bond	123
4.4.1	<i>The hydrogen molecule ion</i>	123
4.4.2	<i>The hydrogen molecule</i>	128
4.4.3	<i>Covalent bonding in gaseous molecules and solids</i>	129
4.5	The metallic bond	133

---

## Chapter 5 The free electron theory of metals 141

5.1	The Drude–Lorentz theory	141
5.2	Electrical conductivity and mobility of electrons	141
5.3	Mean free time $\tau$	143
5.4	Electrical and thermal properties in terms of classical theory	145
5.4.1	<i>The electrical conductivity of metals</i>	145
5.4.2	<i>The heat capacity according to classical theory</i>	146
5.4.3	<i>The thermal conductivity of metals</i>	147
5.5	The quantum mechanical free electron theory	148
5.6	Quantum states in terms of the free electron model	149
5.6.1	<i>The stationary wave approach: one-dimensional model</i>	149
5.6.2	<i>The three-dimensional model</i>	153
5.6.3	<i>The density of states</i>	155
5.7	The travelling wave method	156
5.8	Occupation of electron states	160

5.8.1	<i>Occupation of the states at absolute zero</i>	161
5.8.2	<i>Occupation of the states at ordinary temperatures</i>	162
5.9	The Fermi level	165
5.10	Electrical conductivity according to the free electron theory	166
5.11	Electron emission processes	169
5.11.1	<i>Thermionic emission</i>	169
5.11.2	<i>Field emission</i>	172

---

## **Chapter 6 The thermal properties of solids** 177

6.1	The lattice heat capacity of a solid	177
6.1.1	<i>The Einstein theory</i>	177
6.1.2	<i>The Debye theory</i>	180
6.2	Lattice vibrations	185
6.2.1	<i>Boundary conditions for the linear array</i>	188
6.2.2	<i>Vibrational modes of a crystal</i>	190
6.2.3	<i>Heat capacity from the theory of lattice vibrations</i>	192
6.3	The electronic component of the heat capacity of a metal	195
6.4	The thermal expansion of solids	197
6.5	The thermal conductivity of solids	199
6.5.1	<i>Lattice heat conduction</i>	199
6.5.2	<i>Electronic heat conduction</i>	201

---

## **Chapter 7 Energy bands** 206

7.1	Introduction	206
7.2	The free atom approach to energy bands	207
7.3	The free electron approach to energy bands	217
7.4	The Krönig–Penney model	219
7.5	Brillouin zone representation	222
7.6	Bragg reflection of electron waves	224
7.7	Brillouin zones and crystal structures	227
7.8	Number of states in an energy band	231
7.9	Electron velocity and crystal momentum	233
7.10	Effective mass	236
7.11	Electrons and holes	238
7.12	Energy bands in metals	240
7.13	Energy bands in semiconductors	248

---

## **Chapter 8 Properties of semiconductors** 259

8.1	Intrinsic semiconductors	259
8.2	Extrinsic semiconductors	263
8.3	Carrier concentrations in semiconductors	268
8.3.1	<i>The intrinsic semiconductor</i>	271

8.3.2	<i>The extrinsic semiconductor</i>	273
8.4	Electrical conductivity and carrier mobility	279
8.4.1	<i>Conductivity and mobility measurements</i>	281
8.5	Minority carrier lifetime	285

---

<b>Chapter 9</b>	<b>The p-n junction</b>	<b>291</b>
9.1	Introduction	291
9.2	Electric fields in semiconductors	291
9.2.1	<i>The Einstein relationship</i>	294
9.2.2	<i>Space charge</i>	295
9.2.3	<i>Dielectric relaxation time</i>	296
9.3	Behaviour of charge carriers	297
9.3.1	<i>Minority carrier injection</i>	297
9.3.2	<i>The continuity equation</i>	298
9.3.3	<i>Ambi-polar mobility and diffusivity</i>	301
9.4	The p-n junction	303
9.4.1	<i>The p-n junction in equilibrium</i>	303
9.4.2	<i>The p-n junction with applied bias</i>	307
9.4.3	<i>The current-voltage characteristic of a p-n junction</i>	309

---
