Preface	xi
1. <i>Introduction</i>	1
1.1. Kinetic theory of transport processes	1
1.2. Historical summary	3
2. <i>Properties of a gas</i>	9
2.1. Basic definitions – Distribution functions and average properties	10
2.2. Flux vectors	13
2.3. Gas mixtures	16
2.4. Collision frequency, mean free path	19
3. <i>Boltzmann's equation</i>	22
3.1. Classical derivation of Boltzmann's equation	24
3.2. The Liouville equation and the BBGKY-hierarchy	32
3.3. Cluster expansion of the distribution functions	39
3.4. Functional relation between F_1 and F_2	46
3.5. The collision operator	49
3.6. Concluding remarks	56
4. <i>Fundamental properties of Boltzmann's equation</i>	60
4.1. Macroscopic conservation equations	62
4.2. Boltzmann's H -theorem	68
4.3. Maxwell's velocity distribution function	76
4.4. Boundary conditions	77

4.5. The H -theorem for bounded systems	79
4.6. The linearized Boltzmann equation	86
4.7. Integral theorems; $I(F)$, $[F, G]$	93
4.8. Existence theory for the linearized Boltzmann equation	97
5. <i>The non-uniform state of a simple gas</i>	107
5.1. Hilbert's uniqueness theorem	109
5.2. Chapman-Enskog method	115
5.3. Zero-order approximation to f	122
5.4. First-order approximation to f	123
5.5. Sonine polynomials; a variational principle	131
5.6. Evaluation of η and λ	134
5.7. Kihara approximation	139
5.8. Second-order approximation to f	143
5.9. Order-of-magnitude estimates	151
5.10. The relation between the Boltzmann equation and the equations of fluid dynamics	153
6. <i>The non-uniform state of a gas mixture</i>	163
6.1. Chapman-Enskog method	163
6.2. Zero-order approximation	169
6.3. First-order approximation	170
6.4. Evaluation of the multicomponent transport coefficients	179
6.5. The case of a binary mixture. Self-diffusion	188
6.6. The Lorentz gas	191
6.7. Phenomenological theory of transport coefficients	196
7. <i>The transport coefficients</i>	201
7.1. Reduction of the integrals $[S_{\frac{1}{2}}^{(1)}(\mathcal{C}^2)\mathcal{C}, S_{\frac{1}{2}}^{(1)}(\mathcal{C}^2)\mathcal{C}]$ and $[\mathcal{C}\mathcal{C} - \frac{1}{2}\mathcal{C}^2 I, \mathcal{C}\mathcal{C} - \frac{1}{2}\mathcal{C}^2 I]$	202
7.2. Expressions for some of the bracket integrals	208
7.3. Explicit expressions for the transport coefficients	211
8. <i>Intermolecular forces and atomic collisions</i>	230
8.1. Forces between monatomic molecules	232
8.2. Forces between polyatomic molecules	234
8.3. Forces in systems containing charged particles	236
8.4. Model potentials	237
8.5. Combination rules	244

9. Calculation of transport properties for specific models	246
9.1. Dynamics of binary collisions	246
9.2. The Ω -integrals for model potentials	249
9.3. Quantum mechanical calculations	259
10. Comparison of theory and experiment – Noble gases and their mixtures	265
10.1. Curve fitting procedures and sensitivity of parameters to data	266
10.2. Convergence of the Sonine polynomial expansions	270
10.3. Transport properties of the noble gases	274
10.4. Noble gas mixtures – Diffusion and thermal diffusion	279
10.5. Noble gas mixtures – Viscosity and thermal conductivity	288
11. Polyatomic gases	299
11.1. Viscosity – The effect of asymmetric potentials	301
11.2. Thermal conductivity – The Eucken correction	307
11.3. Classical and quasi-classical treatment of polyatomic gases	312
11.4. Quantum mechanical effects	330
11.5. The Senglleben-Beenakker effect	351
12. Dense gases – Enskog's theory	356
12.1. Enskog's equation	357
12.2. Flux vectors	360
12.3. Macroscopic conservation equations	362
12.4. Zero-order approximation	364
12.5. First-order approximation	365
12.6. Application of Enskog's results	370
13. Dense gases – General theory	376
13.1. The generalized Boltzmann equation and the macroscopic conservation equations	377
13.2. Solution of the generalized Boltzmann equation	387
13.3. The case of a moderately dense gas – The Choh-Uhlenbeck theory	402
13.4. Difficulties in the theory of dense gases	417
14. Ionized gases	423
14.1. Debye shielding	427
14.2. The Chapman-Enskog method for an ionized gas	429

14.3. Results for binary mixtures of ionized gases	451
14.4. Non-equilibrium ionized gases	456
15. <i>Dynamics of rarefied gases</i>	464
15.1. The linearized Boltzmann equation – Models and boundary conditions	465
15.2. The slip flow problem	472
15.3. Non-linear problems	483
Appendix A. Vectors and tensors	491
Appendix B. Reduction of bracket integrals	501
Appendix C. Tables of transport integrals	510
Appendix D. Evaluation of certain integrals in Enskog's theory of dense gases	536
Appendix E. Evaluation of the flux vectors in dense gases	543
References	550
List of symbols	560
Author index	565
Subject index	569
