

TABLE OF CONTENTS

PREFACE	v
CONTRIBUTORS TO VOLUME 1	vii
CONTENTS OF VOLUME 2	xv
Chapter 1. Adsorption and Catalysis	1
<i>Hugh Taylor</i>	
1-1. Chemisorption	1
1-2. Chemisorption on Catalysts	3
1-3. Activation Energy of Chemisorption	3
1-4. The Ammonia Synthesis Reaction	5
1-5. The Decomposition of Formic Acid	7
1-6. Adsorption and the Hydrogen-Ethylene Reaction	9
References	9
Chapter 2. The Gibbs and Polanyi Thermodynamic Descriptions of Adsorption	11
<i>E. Alison Flood</i>	
2-1. Introduction	11
2-2. Thermodynamics of Surface Regions	12
2-3. Surface Tension	42
2-4. The Polanyi Thermodynamic Description of Adsorption	58
2-5. Concluding Remarks	70
References	73
Chapter 3. The Langmuir and BET Theories	77
<i>Stephen Brunauer, L. E. Copeland, and D. L. Kantro</i>	
3-1. The Langmuir Theory	77
3-2. The BET Theory	85
References	102

Chapter 4. Adsorption Thermodynamics and Experimental Measurement	105
<i>E. L. Pace</i>	
4-1. Introduction	105
4-2. Thermodynamics of Adsorption	106
4-3. Experimental Measurement of the Thermodynamic Properties in Physical Adsorption	111
References	125
Chapter 5. Heats of Adsorption	127
<i>J. M. Holmes</i>	
5-1. Introduction	127
5-2. Beebe et al.	129
5-3. Kiselev et al.	136
5-4. Morrison et al.	139
5-5. Kington et al.	139
5-6. Other Laboratories	140
5-7. Conclusions	140
References	141
Chapter 6. Heats of Immersion and the Vapor/Solid Interface	145
<i>A. C. Zettlemoyer and K. S. Narayan</i>	
6-1. Introduction	145
6-2. Experimental	148
6-3. Thermodynamics of Immersional Wetting and Vapor Adsorption	152
6-4. Classification of Heat-of-Immersion Isotherms	156
6-5. Heat of Immersion of Oxides	160
6-6. Heterogeneities on Solid Surfaces	167
6-7. Average Polarity of Solid Surfaces	169
6-8. Miscellaneous	171
References	172
Chapter 7. Surface Forces and the Solid-Gas Interface	175
<i>A. D. Crowell</i>	
7-1. Introduction	175
7-2. Van der Waals' Forces at the Solid-Gas Interface	176
7-3. Chemical Forces at the Solid-Gas Interface	193
References	199

Chapter 8. Surface Energy and Surface Tension of Crystalline Solids	203
<i>G. C. Benson and K. S. Yun</i>	
8-1. Introduction	203
8-2. Surface Thermodynamics-	204
8-3. Atomistic Models	212
8-4. Theoretical Estimation of Surface Energy	220
8-5. Theoretical Estimation of Surface Tension	245
8-6. Experimental Measurements	252
8-7. Comparison of Experimental and Theoretical Results	263
References	264
Chapter 9. The Structure of Surfaces and Its Role in Adsorption	271
<i>W. J. Dunning</i>	
9-1. Introduction	271
9-2. Perfect Surfaces	275
9-3. Imperfect Surfaces	282
9-4. Variation of Surface Tension with Orientation	285
9-5. Roughness of Steps	292
9-6. Roughness of Surfaces	294
References	302
Chapter 10. Adsorbate Equation of State	307
<i>William A. Steele</i>	
10-1. Introduction	307
10-2. Imperfect-Gas Approach	314
10-3. Mobile Monolayers at Low Temperatures	322
10-4. Partially Mobile and Localized Monolayers	333
10-5. Transition from Quantum to Classical Statistical Mechanics	338
10-6. Monolayer Adsorption on Heterogeneous Surfaces	344
10-7. Multilayer Adsorption	353
10-8. Summary	365
References	367
Chapter 11. Adsorption Theory from the Viewpoint of Order-Disorder Theory	371
<i>J. M. Honig</i>	
11-1. Preliminary Comments	371
11-2. Procedural Outline and Example I: Derivation of the Langmuir Gas Adsorption Isotherm Equation	373

11-3. Example II: The Fowler-Guggenheim Adsorption Isotherm	374
11-4. Generalized Treatment; Introduction	379
11-5. The Triangle Approximation	382
11-6. The Rhombus as the Basic Figure	384
11-7. The Square Lattice	385
11-8. Theoretical Isotherms	386
11-9. The Configurational Entropy	392
11-10. Extension of ODT to Large Adsorbate Molecules	397
11-11. Mixing and Intrinsic Contributions	399
11-12. Equilibrium Conditions and the Gas Adsorption Isotherm Pertaining to r -mers	402
11-13. Isotherm Equation for $r > 1, w_2 \ll kT$	403
11-14. Results and Discussion Pertaining to Adsorption of r -mers	405
11-15. Interpretation of Data in Terms of ODT References	409 411
Chapter 12. BET Surface Areas—Methods and Interpretations	413
<i>D. L. Kantro, Stephen Brunauer, and L. E. Copeland</i>	
12-1. Range of Applicability	414
12-2. Molecular Areas	415
12-3. Methods of Measurement	418
12-4. Volumetric Methods	418
12-5. Gravimetric Procedures	423
12-6. Thermal-Conductivity Methods	425
12-7. Single-Point Methods	426
References	428
Chapter 13. Atomically Clean Solid Surfaces—Preparation and Evaluation	431
<i>H. E. Farnsworth</i>	
13-1. Introduction	431
13-2. Preparation	433
13-3. Evaluation	438
References	444
Chapter 14. Physical Adsorption at Extremely Low Pressures	447
<i>J. P. Hobson</i>	
14-1. Introduction	447
14-2. Physical Adsorption	450
References	486

TABLE OF CONTENTS	xiii
--------------------------	-------------

Chapter 15. The Homotattic Surface and Adsorption Potentials	491
---	------------

Sydney Ross

15-1. The Nature of Adsorption on a Homotattic Surface	491
15-2. The Ross-Olivier Model of a Heterogeneous Surface	494
15-3. Conclusions	499
References	501

Chapter 16. A Commentary on Chapters 1 to 15	503
---	------------

G. D. Halsey, Jr.

16-1. Thermodynamics	503
16-2. Lattice Models of Adsorption	505
16-3. Heat of Adsorption	507
16-4. The Calculation of Surface Energies	508
16-5. A Rigorous Approach	509
16-6. Equations of State	510
16-7. Lattice Gases	511
16-8. The BET Method	512
16-9. Cleanliness and Low-Pressure Measurements	512
16-10. Isotherms with Correct Limiting Behavior	514
