## CONTENTS

1. Evaporation of Crystalline Bodies 2. Mechanism of the Processes of Dissociation and Hole Formstion in a Crystal 3. Dependence of the Degree of Dissociation of a Crystal Lattic on Temperature and Pressure 4. The Kinetics of Lattice Distortions and their Motion in the Crystal 5. Self-diffusion and Diffusion of Impurities in Crystals 6. Lattice Distortions in Ionic Crystals 7. Electrical Conductivity of Ionic Crystals 8. Electronic Conductivity and Optical Properties of Ionic Crystals 11. PERTURBATION OF ALTERNATION AND ORIENTATION ORDER IN MIXED AND MOLECULAR CRYSTALS 1. Order and Disorder in the Distribution of Atoms in Binary Alloys (Inter-metallic Compounds) 2. Distant and Local Alternation Order 3. Improvement and Extension of the Bragg-Williams Theory 4. General Thermodynamic Theory of Phenomena connected with a Variation of the Degree of Order 5. Orientation Order in Dipole Crystals 11. PROPERTIES OF LIQUIDS AND MECHANISM OF FUSION 1. Relation between the Solid and Liquid States 2. Estimate of the Influence of Volume and Temperature Change on the Properties of Solid and Liquid Bodies. Mechanism of Melting 3. Application to the Process of Fusion of the 'Hole' and 'Dissociation' Schemes 4. Local Order in Liquids and 'Structure Diffusion' in a Crystal Lattice (Prins) 5. Dependence of the Structure of Liquids on the Free Volume Kirkwood's Theory 6. Equation of State of Crystalline Bodies and Conditions for Melting 7. Temperature Dependence of the Rigidity of a Crystal Lattice B. Thermodynamics of Relatively Stable States of Solid and Liquid Bodies 9. Liquids in the Solid-like State	. 1	REAL CRYSTALS AT ELEVATED TEMPERATURES	I.
tion in a Crystal 3. Dependence of the Degree of Dissociation of a Crystal Lattice on Temperature and Pressure 4. The Kinetics of Lattice Distortions and their Motion in the Crystal 5. Self-diffusion and Diffusion of Impurities in Crystals 6. Lattice Distortions in Ionic Crystals 7. Electrical Conductivity of Ionic Crystals 8. Electronic Conductivity and Optical Properties of Ionic Crystals 11. PERTURBATION OF ALTERNATION AND ORIENTATION ORDER IN MIXED AND MOLECULAR CRYSTALS 1. Order and Disorder in the Distribution of Atoms in Binary Alloys (Inter-metallic Compounds) 2. Distant and Local Alternation Order 3. Improvement and Extension of the Bragg-Williams Theory 4. General Thermodynamic Theory of Phenomena connected with a Variation of the Degree of Order 5. Orientation Order in Dipole Crystals 11. PROPERTIES OF LIQUIDS AND MECHANISM OF FUSION 1. Relation between the Solid and Liquid States 2. Estimate of the Influence of Volume and Temperature Change on the Properties of Solid and Liquid Bodies. Mechanism of Melting 3. Application to the Process of Fusion of the 'Hole' and 'Dissociation' Schemes 4. Local Order in Liquids and 'Structure Diffusion' in a Crystal Lattice (Prins) 5. Dependence of the Structure of Liquids on the Free Volume Kirkwood's Theory 6. Equation of State of Crystalline Bodies and Conditions for Melting 7. Temperature Dependence of the Rigidity of a Crystal Lattice B. Thermodynamics of Relatively Stable States of Solid and Liquid Bodies 9. Liquids in the Solid-like State	. 1		
on Temperature and Pressure  4. The Kinetics of Lattice Distortions and their Motion in the Crystal  5. Self-diffusion and Diffusion of Impurities in Crystals  6. Lattice Distortions in Ionic Crystals  7. Electrical Conductivity of Ionic Crystals  8. Electronic Conductivity and Optical Properties of Ionic Crystals  11. PERTURBATION OF ALTERNATION AND ORIENTATION ORDER IN MIXED AND MOLECULAR CRYSTALS  1. Order and Disorder in the Distribution of Atoms in Binary Alloys (Inter-metallic Compounds)  2. Distant and Local Alternation Order  3. Improvement and Extension of the Bragg-Williams Theory  4. General Thermodynamic Theory of Phenomena connected with a Variation Order in Dipole Crystals  11. PROPERTIES OF LIQUIDS AND MECHANISM OF FUSION  1. Relation between the Solid and Liquid States  2. Estimate of the Influence of Volume and Temperature Change on the Properties of Solid and Liquid Bodies. Mechanism of Melting  3. Application to the Process of Fusion of the 'Hole' and 'Dissociation' Schemes  4. Local Order in Liquids and 'Structure Diffusion' in a Crystal Lattice (Prins)  5.
