

Contents

1 The earth in the planetary system

1.1	Origin of the earth in the solar system (H. WÄNKE)	See Subvolume V/2a
1.2	The motion of the earth (E. GROTN)	See Subvolume V/2a

2 Properties of the solid earth

2.1 Seismicity and the interior of the earth

2.1.1	Seismicity (G. SCHNEIDER)	See Subvolume V/2a
2.1.2	Seismic waves and free oscillations (G. MÜLLER, W. ZÜRN)	See Subvolume V/2a
2.1.3	Structure, elastic and rheological properties and density of the earth's interior, gravity and pressure (A.M. DZIEWONSKI, D.L. ANDERSON)	See Subvolume V/2a
2.1.4	Structure of the earth's crust and upper mantle (C. PRODEHL)	See Subvolume V/2a

2.2 Heat flow and temperature distribution in the earth's interior

2.2.1	Oceanic and continental heat-flow data	
2.2.1.1	Oceanic heat flow data (R. von HERZEN)	See Subvolume V/2a
2.2.1.2	Continental heat flow data (D.S. CHAPMAN)	1
2.2.1.2.0	Units	1
2.2.1.2.1	Definitions	1
2.2.1.2.2	Measurements	2
2.2.1.2.3	Continental heat flow literature	2
2.2.1.2.4	Continental heat flow results	3
2.2.1.2.5	Global heat flow	10
2.2.1.2.6	References	16
2.2.1.2.7	Supplementary references	17

2.2.2	Radioactive heat production in the continental crust (L. RYBACH)	See Subvolume V/2a
-------	--	--------------------

2.2.3	Temperature profiles in the earth's interior (E.A. LUBIMOVA)	20
-------	--	----

2.2.3.0	List of symbols	20
2.2.3.1	Introductory remarks	20
2.2.3.2	Methods for the temperature determination in the earth's interior	20
2.2.3.3	Geothermal method	22
2.2.3.4	References	23

2.2.4	Heat transport in the earth's interior (F.D. STACEY)	24
-------	--	----

2.2.4.0	List of symbols	24
2.2.4.1	Terrestrial heat flux	25
2.2.4.2	Conductive heat transport	25
2.2.4.3	Convective heat transport	27
2.2.4.4	References	30
2.2.4.4.1	General references	30
2.2.4.4.2	Special references	30

2.3 Electrical properties of the earth's interior

2.3.1	Depth distribution of the electrical conductivity (U. SCHMUCKER)	370
-------	--	-----

2.3.1.0	List of symbols and abbreviations	370
---------	---	-----

2.3.1.1	Introduction	370
---------	------------------------	-----

2.3.1.2	Derivation of apparent resistivity estimates from experimental electric and electromagnetic data	371
---------	--	-----

2.3.1.3	Inversion of electromagnetic response estimates	372
---------	---	-----

2.3.1.4	Principle constraints of interpretation	374
---------	---	-----

2.3.1.5	General notes on response data and models in figures and tables of subsection 2.3.1	375
---------	---	-----

2.3.1.6	The electrical resistivity in the continental crust	376
---------	---	-----

2.3.1.7	The electrical resistivity of the mantle from observations on continents	384
---------	--	-----

2.3.1.8	The resistivity of crust and mantle beneath oceans	392
---------	--	-----

2.3.1.9	References	396
---------	----------------------	-----

2.3.1.9.1	Monographs and collections of review articles	396
2.3.1.9.2	Special references	396
2.3.2	Anomalies of the electrical conductivity in the earth's crust and upper mantle (V. HAAK)	397
2.3.2.0	List of symbols	397
2.3.2.1	Introduction	398
2.3.2.2	Representation of experimental data	398
2.3.2.3	Resolution and reliability	399
2.3.2.4	Selection of anomalies	399
2.3.2.5	Presentation of results	399
2.3.2.6	List of compiled conductivity anomalies	400
2.3.2.7	Description of anomalies	401
2.3.2.8	References	434
2.4	Composition of the earth's interior (I. JACKSON)	See Subvolume V/2a
2.5	Tides of the earth	See Subvolume V/2a
2.5.0	List of symbols and abbreviations for 2.5.1 and 2.5.2	See Subvolume V/2a
2.5.1	Tidal forcing field (H. WILHELM, W. ZÜRN)	See Subvolume V/2a
2.5.2	Tides of the solid earth (W. ZÜRN, H. WILHELM)	See Subvolume V/2a
2.5.3	Tidal friction and dynamics of the earth-moon-system (P. BROSCH, J. SÜNDERMANN)	See Subvolume V/2a
3	Gravity field and figure of the earth (H.-G. KAHLE)	See Subvolume V/2a
4	Magnetic field of the earth	31
4.1	Sources of the geomagnetic field (U. SCHMUCKER)	31
4.1.1	External part of the earth's magnetic field	31
4.1.1.0	Components of the field, units	31
4.1.1.1	Planetary field, interplanetary field and geomagnetic variations	32
4.1.1.2	Classification of geomagnetic variations	36
4.1.1.3	Separation of external and internal parts of geomagnetic variations	38
4.1.1.4	Equivalent currents	38
4.1.1.5	Magnetic fields of external origin within the earth	39
4.1.1.6	Morphology of geomagnetic variations	42
4.1.1.6.1	Solar daily variations (S)	42
4.1.1.6.2	Lunar daily variations (L)	50
4.1.1.6.3	Polar magnetic storms and substorms	52
4.1.1.6.4	Smoothed storm-time variations Dst and DS	56
4.1.1.6.5	Solar cycle variations	57
4.1.1.6.6	Pulsations and electromagnetic wave emissions	59
4.1.1.7	Geomagnetic indices	59
4.1.2	Internal part of the earth's magnetic field	63
4.1.2.1	Sources of the internal part	63
4.1.2.2	Spherical harmonic analysis of the geomagnetic field 1835 to 1980	63
4.1.2.3	Multipole spectra 1835 to 1980	66
4.1.2.4	Spectral separation of core and crustal multipoles	68
4.1.3	Spherical harmonics in geomagnetism	68
4.1.3.1	Series of spherical harmonic functions	68
4.1.3.2	Spherical harmonic analysis	69
4.1.3.3	Spherical harmonic synthesis	70
4.1.3.4	Current function for equivalent current system	70
4.1.3.5	Mean square amplitude and energy density of multipole fields	71
4.1.4	References for 4.1	71
4.1.4.1	Monographies	71
4.1.4.2	Special references	72
4.1.4.3	Tabular works	72
4.2	Magnetic field on the surface and the interior of the earth	74
4.2.1	Crustal anomalies and their cause (W. BOSUM, R. PUCHER, H. ROESER)	74
4.2.1.0	List of symbols and abbreviations	74
4.2.1.1	Definition of the crustal anomalies	74

4.2.1.2	Layout and execution of geomagnetic surveys	74
4.2.1.3	Data handling	76
4.2.1.3.1	Reduction	76
4.2.1.3.2	Transformation	77
4.2.1.3.3	Presentation	78
4.2.1.4	Interpretation methods	78
4.2.1.4.1	Mathematical interpretation	78
4.2.1.4.2	Structural interpretation	80
4.2.1.5	Magnetic anomalies of the continental crust	80
4.2.1.6	Marine magnetic anomalies	90
4.2.1.7	Economic aspects	98
4.2.1.8	Bibliography	98
4.2.1.8.1	Review papers	98
4.2.1.8.2	References	98
4.2.2	Magnetic and electric fields due to electromagnetic induction by external sources (U. SCHMUCKER)	100
4.2.2.0	List of symbols abbreviations	100
4.2.2.1	Basic observations and theoretical concepts	101
4.2.2.2	Response functions for induced magnetic and electric fields	102
4.2.2.2.1	General description and classification	102
4.2.2.2.2	<i>Q</i> -response functions	103
4.2.2.2.3	<i>C</i> -response	109
4.2.2.2.4	The magnetotelluric scalar <i>Z</i> -response	114
4.2.2.3	Natural earth potentials and earth currents	119
4.2.2.3.1	Introduction	119
4.2.2.3.2	Self-potentials: U_{SP}	119
4.2.2.3.3	Electromagnetically (EM) induced potentials: U_{ind}	119
4.2.2.3.4	Motion induced potentials: U_{ind}^*	120
4.2.2.3.5	Earth currents	123
4.2.2.4	Derivation of external source fields from surface observations	123
4.2.2.5	References	124
4.2.3	Observation and description of the main geomagnetic field and its secular variation (D. VOPPEL)	126
4.2.3.0	List of symbols, quantities, units and abbreviations	126
4.2.3.1	Introduction	127
4.2.3.1.1	General aspects	127
4.2.3.1.2	Symbols, quantities, and formulae	127
4.2.3.2	Observation of the earth's magnetic field	129
4.2.3.2.1	Geomagnetic observatories	129
4.2.3.2.2	Land surveys	147
4.2.3.2.3	Airborne and seaborne surveys	147
4.2.3.2.4	Satellite surveys	148
4.2.3.3	Analyses of observations	148
4.2.3.3.1	Analyses of local and regional surveys	148
4.2.3.3.2	Analyses of worldwide observations	151
4.2.3.4	Knowledge gained from spherical harmonic models	169
4.2.3.4.1	Magnetic pole positions	177
4.2.3.4.2	Determination of external fields using the spherical harmonic analyses, and local anomalies of the secular variation	178
4.2.3.5	References	179
4.2.4	Material properties entering the theory of the main geomagnetic field (F.H. BUSSE)	181
4.2.4.0	List of symbols	181
4.2.4.1	Theory of the origin of geomagnetism	181
4.2.4.2	Material properties of the earth's core	182
4.2.4.3	References	183
4.3	Palaeomagnetism and archaeomagnetism (H. SOFFEL)	184
4.3.0	List of symbols and abbreviations	184

4.3.1	Introduction, definitions, hypotheses	185
4.3.1.1	Principles of the method, units	185
4.3.1.2	Dipole, field, secular variation	185
4.3.1.3	Rock magnetism, types and origin of remanent magnetization	186
4.3.1.4	Collection of rock samples, measurement of remanent magnetization and statistical analysis of the data	187
4.3.1.5	Definition and computation of the poles in palaeomagnetism. Hypotheses in palaeomagnetism	189
4.3.2	Apparent polar wander paths (APWP)	192
4.3.2.1	Definitions, criteria for the reliability of the data	192
4.3.2.2	Apparent polar wander paths (APWP) of continents and subcontinents	192
4.3.2.3	Palaeomagnetic pole positions of smaller crustal blocks	198
4.3.2.4	Apparent polar wander paths (APWP) of the Precambrian	201
4.3.2.5	Geodynamical aspects of the apparent polar wander paths (APWP)	203
4.3.3	Geomagnetic polarity time scale, magnetostратigraphy, palaeo-secular variation	212
4.3.3.1	Field reversals and self-reversal of remanent magnetization	212
4.3.3.2	Polarity time scales and their application	212
4.3.3.3	Palaeo-secular variation	219
4.3.4	Determination of the intensity of the ancient geomagnetic field	220
4.3.4.1	Methods, reference system, measuring procedures	220
4.3.4.2	Palaeointensity of the geomagnetic field. Results	222
4.3.5	Geomagnetic field during a polarity transition	222
4.3.5.1	Palaeo-remanence directions and pole positions during a polarity transition	222
4.3.5.2	Palaeointensity during a polarity transition	224
4.3.6	Archaeomagnetism	225
4.3.6.1	Methods	225
4.3.6.2	Archaeomagnetic results	226
4.3.6.3	Applications of archaeomagnetism	231
4.3.7	Palaeomagnetism of samples of extraterrestrial origin	232
4.3.7.1	Meteorites	232
4.3.7.2	Lunar rocks and soil, origin of the lunar magnetic field	233
4.3.8	References	234
5	Transport of masses in the earth's interior	243
5.1	Relief of the earth's surface and of the sea floor	243
5.1.1	The relief of the earth's surface (H. HAGEDORN)	243
5.1.1.1	The hypsographic curve	243
5.1.1.2	Area of continents and oceans	246
5.1.1.3	Structural forms due to endogenic processes	247
