1 Topography of the ocean floor (H. G. GIERLOFF-EMDEN)	1
1.0 List of abbreviations	1
1.1 Topography	2
1.1.1 General remarks on the topography of the ocean floor	2
1.1.2 Exploration of the ocean floor and its topography	2
1.1.3 Units, measurements and parameters of the topography of the ocean floor	3
1.1.4 The boundaries of the ocean	4
1.1.5 The spatial extension of the ocean	5
1.1.5.1 The horizontal distribution of the world ocean	5
1.1.5.2 The horizontal extension of the oceans and the continents	8
1.1.5.3 The horizontal classification of the oceans	9
1.1.5.4 Limits and nomenclature of oceans and seas	10
1.1.5.5 Spatial dimensions of the oceans and adjacent seas	12
1.2 Hypsography	14
1.2.1 The Hypsographic Curve	14
1.2.2 Global hypsographic profiles according to the Hypsographic Curve	16
1.2.3 Hypsometric data of the oceans	17
1.2.4 Hypsometry of ocean basin provinces based on a physiographic classification	20
1.2.5 Hypsometric Curves of single ocean basins and ocean basin provinces	23
1.3 Bathymetry	26
1.3.1 The measurable parameters	26
1.3.1.1 The position of a topographic data	26
1.3.1.2 The depth of a topographic data	27
1.3.1.3 Ambiguity of the detected configuration of the topography of the floor of the ocean	27
1.3.1.4 Conversion of sounded data into contourlines of bathymetric maps	30
1.3.2 Topographic features of the ocean floor on profiles	31
1.3.2.1 Bathymetric profiles, geometric conditions	31
1.3.2.2 Topographic features of particular oceans on transoceanic bathymetric profiles	33
1.3.2.3 Classification of topographic features on acoustic sounded ocean floor and subbottom stratigraphic reflection (bottom penetrating sounding) profiles	37
1.3.3 Classification of maps and charts presenting ocean floor topography	38
1.3.3.1 Nautical charts	38
1.3.3.2 Bathymetric charts	38
1.3.3.3 Physiographic maps of the ocean floor	41
1.4 Topography of the ocean floor: features and pattern	48
1.4.1 Classification of the ocean floor features	48
1.4.1.1 Physiographic provinces of the Atlantic Ocean profile and space dimensions	49
1.4.1.2 Spatial dimensions of the features of submarine topography	51
1.4.2 Major topographic features of the continental margin complex	52
1.4.2.1 Terminology of continental margins and adjacent features	53
1.4.2.2 Classification of continental margins	53
1.4.2.3 The shelf	54
1.4.2.4 The continental slope and rise	57
1.4.2.5 Canyons, abyssal cones, and fans	59
1.4.2.6 Trenches	68
1.4.2.7 Island arcs and trench systems	71

1.4.3	The ocean-basin floor complex	75
1.4.3.1	Abyssal plains	77
1.4.3.2	Abyssal hills	77
1.4.3.2.1	Morphometric classification of the submarine, elevated relief	78
1.4.3.3	Submarine plateaus	80
1.4.3.4	Seamounts	82
1.4.3.4.1	Seamount and volcanic arcs and earthquake zones	85
1.4.3.4.2	Topography of a seamount, surveyed with the Sea-Beam System: the "Sonne Seamount" south of Hawaii	86
1.4.3.4.3	Seamounts in the Pacific Ocean and hot spots	87
1.4.4	Major topographic features of Mid-Oceanic Ridge complex	91
1.4.4.1	The rift valley of the Mid-Oceanic Ridge	93
1.4.4.2	Fracture zones	94
1.4.5	Small scale topography of the ocean floor	96
1.4.5.1	Classification of small scale relief and microrelief	96
1.4.5.2	Diapirs	98
1.4.5.3	Sandwaves, dunes, classification	99
1.4.5.4	Microtopography of the ocean floor: rock fragments, nodules, ripples, biogenic features	102
1.4.5.5	Manganese nodules, micro-features of the ocean floor	102
1.5	Sedimentation of the ocean bottom	104
1.5.1	The sediment coverage of the ocean floor	104
1.5.2	The mass supply of sediments	106
1.5.3	Sediment types	108
1.5.4	Sediment distribution in the oceans	109
1.5.5	Ocean bottom currents and sediment transport causing microtopography	110
1.6	Global geological structure and topography	114
1.6.1	Sea floor spreading and global topography	114
1.6.2	Plate tectonics and ocean floor topography	115
1.6.3	Topography and geometry of sea floor spreading and plate tectonics	117
1.6.4	Variation of ocean floor topography due to sea floor spreading in time-scale	118
1.6.5	Variation of ocean floor topography due to subsidence in time-scale	120
1.7	Chronology of sea floor topography	121
1.7.1	The time scale as a geologic factor	121
1.7.2	The geomagnetic time scale	122
1.8	References for 1	124
2	In-situ instruments and measuring techniques (G. KRAUSE)	134
2.1	The nature of oceanographic measurements	134
2.1.1	Variables to be measured, time and space scales	134
2.1.2	Environmental conditions and accuracy of instruments	134
2.1.3	Accuracy and standards	135
2.2	Platforms	135
2.2.1	Ships	135
2.2.2	Instrument moorings	140
2.2.2.1	Surface moorings	140
2.2.2.2	Under-water moorings	142
2.3	Measuring techniques for oceanic motions	146
2.3.1	Current sensors and current meters for Eulerian measurements	147
2.3.1.1	Current meters with hydrodynamic sensors	148
2.3.1.1.1	Rotating elements and current vanes	148
2.3.1.1.2	Drag force sensors	159
2.3.1.1.3	Hydrodynamic pressure sensors	161
2.3.1.1.4	Heat transport sensors	161

2.3.1.2 Current meters based on general effects of motion	164
2.3.1.2.1 Electromagnetic induction by the Earth magnetic field	164
2.3.1.2.2 Electromagnetic current sensors	169
2.3.1.2.3 Acoustic Doppler effect	171
2.3.1.2.4 Optical Doppler effect	172
2.3.1.2.5 Travel time current meters	177
2.4 Elevation of the sea surface	180
2.4.1 Surface elevation for tidal and subtidal periods	180
2.4.1.1 Geometrical measurement of surface elevations	180
2.4.1.2 Deep-sea tide gauges	182
2.4.2 Surface elevations in the range of wind waves and swell	185
2.5 Variables of state	187
2.5.1 Temperature	187
2.5.1.1 Temperature profiles	189
2.5.1.2 Slow-response thermometers	193
2.5.2 Conductivity	194
2.5.3 Pressure	198
2.5.4 STD/CTD-instrumentation	202
2.6 Basic methods of observation	208
2.6.1 Observations at grid points	208
2.6.1.1 Spatial observations along hydrographic sections	208
2.6.1.2 Repeated profile measurements at a fixed position	212
2.6.1.3 Measurement of time series	216
2.6.2 Lagrangian observations	217
2.6.2.1 Surface drifters	217
2.6.2.2 Subsurface drifters	223
2.7 References for 2	225
3 Properties of sea water	233
3.1 Physical properties (general) (G. SIEDLER, H. PETERS)	233
3.1.0 List of symbols and abbreviations	233
3.1.1 Thermodynamic variables	234
3.1.2 Salinity	235
3.1.3 Density	237
3.1.4 Compressibility	242
3.1.5 Thermal expansion, density maximum	244
3.1.6 Specific heat	247
3.1.7 Adiabatic lapse rate, potential temperature	250
3.1.8 Vapour pressure, boiling point, freezing point	252
3.1.9 Heat of fusion, heat of evaporation	256
3.1.10 Thermal conductivity	256
3.1.11 Diffusion	257
3.1.12 Viscosity	258
3.1.13 Surface tension	261
3.1.14 Osmotic pressure	261
3.1.15 Brunt-Väisälä frequency	262
3.1.16 References for 3.1	263
3.2 Acoustical properties of the ocean (P. WILLE)	265
3.2.0 List of symbols and abbreviations	265
3.2.1 Introduction	266
3.2.2 Models of sound propagation	268
3.2.2.1 Wave models	269
3.2.2.2 Ray models	270
3.2.2.3 SONAR equations	272

3.2.3 Applications	274
3.2.3.1 Remote sensing methods (RSM)	274
3.2.3.1.1 Measuring quantities and parameters of remote sensing (RS)	276
3.2.3.1.2 Connection with environmental properties	276
3.2.3.1.3 Sound reflection/geometrical contour	277
3.2.3.1.4 Sound refraction/sound speed field	278
3.2.3.1.5 Sound scattering/object features	278
3.2.3.1.6 Doppler shift/object velocity	279
3.2.3.1.7 Sound radiation/motion processes	280
3.2.3.2 Signal transmission methods	280
3.2.3.2.1 Navigation	280
3.2.3.2.2 Communication	281
3.2.3.2.3 Data telemetry	281
3.2.3.2.4 Beacons	281
3.2.3.2.5 Remote control	281
3.2.3.3 In-situ methods	281
3.2.3.3.1 Sound speed	282
3.2.3.3.2 Current	282
3.2.3.3.3 Air suspension	282
3.2.4 Sound transducer characteristics	282
3.2.4.1 Sound sources/receivers	282
3.2.4.2 Directional resolution	283
3.2.4.3 Time/frequency resolution	285
3.2.5 Sound speed	285
3.2.5.1 Definition, data base	285
3.2.5.2 Specifications of the parameters determining sound speed	286
3.2.5.2.1 Variability of temperature, salinity and depth combinations; "Neptunian waters"	286
3.2.5.2.2 Temperature scale	289
3.2.5.2.3 Depth-equivalent of pressure	289
3.2.5.2.4 Salinity concept	289
3.2.5.2.5 Influence of suspensions	290
3.2.5.3 Tables of sound speed	290
3.2.5.3.1 Sound speed table for pure water under atmospheric pressure	290
3.2.5.3.2 Sound speed tables for sea water; temperature, salinity and pressure dependence	290
3.2.5.4 Approximation formulae of sound speed	291
3.2.5.4.1 Approximation formula of sound speed in pure water under atmospheric pressure	291
3.2.5.4.2 Approximation formula of sound speed in sea water	292
3.2.5.4.3 Simplified sound speed formula	306
3.2.5.5 Deep-sea sound speed profiles	306
3.2.5.6 Shallow-water sound speed profiles	310
3.2.6 Sound absorption/transmission loss	320
3.2.6.1 Definitions	320
3.2.6.2 Deep-ocean transmission loss	320
3.2.6.2.1 Measuring methods	321
3.2.6.2.2 Geometrical spreading loss	324
3.2.6.2.3 Viscous absorption/pure-water absorption	324
3.2.6.2.4 Absorption by $MgSO_4$	325
3.2.6.2.5 Absorption by $B(OH)_3$	327
3.2.6.2.6 Absorption by further relaxation processes	332
3.2.6.2.7 Propagation loss due to scattering	333
3.2.6.2.8 Propagation loss due to diffraction	335
3.2.6.2.9 Special phenomena	336
3.2.6.2.10 Complete approximation formula for sound attenuation in sea water	336
3.2.6.2.11 Simplified approximation formulae for the deep water channel attenuation .	337

3.2.6.3	Shallow-water transmission loss	338
3.2.6.3.1	Measuring methods	338
3.2.6.3.2	Geometrical spreading loss	339
3.2.6.3.3	Absorption by the sea volume	339
3.2.6.3.4	Influence of the sound refraction by the sea volume	339
3.2.6.3.5	Absorption by bottom loss	340
3.2.6.3.6	Influence of the sea surface	341
3.2.6.3.7	Depth dependence of transmission loss	342
3.2.6.3.8	Special phenomena	344
3.2.6.3.9	Approximation polymomials	347
3.2.6.4	Fluctuation of transmitted sound	348
3.2.6.4.1	Temporal fluctuation	348
3.2.6.4.2	Spatial coherence	348
3.2.7	Ambient noise	348
3.2.7.1	Definitions, general remarks	348
3.2.7.2	Hydrostatic effects	349
3.2.7.3	Hydrodynamic effects	349
3.2.7.4	Seismic activity	350
3.2.7.5	Ship traffic	351
3.2.7.6	Sea surface agitation	352
3.2.7.7	Thermal noise	352
3.2.7.8	Special/intermittent noise sources	353
3.2.7.8.1	Rain	353
3.2.7.8.2	Ice	353
3.2.7.8.3	Biological	355
3.2.7.8.4	Technical noise of other origin	355
3.2.7.9	Further properties of ambient noise	355
3.2.7.9.1	Depth dependence	355
3.2.7.9.2	Directional characteristics	356
3.2.7.9.3	Level distribution	357
3.2.8	Scattering and reverberation	358
3.2.8.1	Definitions	358
3.2.8.2	Scattering by the sea volume	359
3.2.8.2.1	Backscattering by individual organisms, geometrical region	359
3.2.8.2.2	Backscattering by individual organisms; long-wave-length region	360
3.2.8.2.3	Backscattering by distributed organisms (scattering layer)	361
3.2.8.2.4	Scattering by sound speed structures	364
3.2.8.2.5	Scattering by air bubble layers	364
3.2.8.2.6	Scattering by sediment suspensions	364
3.2.8.3	Scattering by the sea surface	364
3.2.8.3.1	Scattering by the free sea surface	364
3.2.8.3.2	Frequency distribution of scattered sound	367
3.2.8.3.3	Scattering by ice covers	369
3.2.8.4	Reflection and scattering by the sea bottom	369
3.2.8.4.1	Reflection at the sea bottom	369
3.2.8.4.2	Scattering at the sea bottom	371
3.2.8.4.3	Scattering at sediments with gaseous enclosures	372
3.2.8.4.4	Scattering by morphological features (bedforms)	373
3.2.9	References for 3.2	375
3.3	Optical properties of sea water (N. K. HØJERSLEV)	383
3.3.1	Basic facts and equations	383
3.3.1.1	Definitions and nomenclature	383
3.3.1.2	Quantities related to radiance and irradiance	387
3.3.1.3	Inherent properties	389
3.3.1.4	Equations of radiative transfer	391

3.3.2	Optical properties of water	395
3.3.2.1	Optical properties of pure water and pure sea water	395
3.3.2.2	Optical properties of natural sea waters	399
3.3.3	Optical classifications of sea water	404
3.3.3.1	General principles of classification	404
3.3.3.2	The original optical classification	407
3.3.3.3	Classification of sea water in terms of quanta irradiance	412
3.3.3.4	Classification of sea water in terms of the color of the sea	414
3.3.3.5	Classification of sea water in terms of the downward irradiance in a narrow or broad wavelength band	418
3.3.3.6	Classification of sea water in terms of light attenuation and light scattering coefficients	420
3.3.3.7	Classification of sea water in terms of light absorption properties of suspended and dissolved matter	426
3.3.4	Daylight in the sea	428
3.3.4.1	Irradiance on the sea surface	428
3.3.4.2	Reflection and albedo at the sea surface	430
3.3.4.3	Irradiance in the sea	433
3.3.4.4	Radiance in the sea	439
3.3.5	Visibility in the sea	446
3.3.5.1	Basic definitions	446
3.3.5.2	The Secchi disc	447
3.3.6	Passive remote sensing	452
3.3.7	References for 3.3	459
3.4	Chemical properties of sea water (G. WEICHART)	463
3.4.0	List of symbols and abbreviations	463
3.4.1	General remarks	463
3.4.2	Chlorinity, chlorosity, salinity	463
3.4.3	Chemical composition of sea water	464
3.4.3.1	Major constituents, alkalinity, pH	465
3.4.3.2	Minor constituents	465
3.4.3.3	Dissolved atmospheric gases	468
3.4.3.4	Organic compounds	468
3.4.4	Residence times of elements in the oceans	469
3.4.5	Solubility of gases in sea water	470
3.4.6	Artificial sea water	474
3.4.7	References for 3.4	474
