1 Topography of the ocean floor	See Subvolume V/3a
2 In-situ instruments and measuring techniques	See Subvolume V/3a
3 Properties of sea water	See Subvolume V/3a
4 Ocean circulation	1
4.1 Equations for oceanic motions (P. MÜLLER, J. WILLEBRAND)	1
4.1.0 List of symbols, notation	1
4.1.1 Introduction	2
4.1.2 Basic conservation laws	2
4.1.3 Boundary conditions	3
4.1.4 Molecular and turbulent fluxes	4
4.1.5 Equations of oceanic motions	5
4.1.6 Classes of motion	6
4.1.7 Acoustic modes and the anelastic approximation	7
4.1.8 Boussinesq approximation	8
4.1.9 Dynamical significance of the $T-S$ mode	8
4.1.10 Shallow water equations	9
4.1.11 Large scale geostrophic motions	10
4.1.12 Quasigeostrophic flows	10
4.1.13 Small scale motions	11
4.1.14 Gravity motions	12
4.1.15 References for 4.1	14
4.2 Temperature-salinity characteristics of world ocean waters (E. FAHRBACH, J. MEINCKE)	15
4.2.1 Introduction	15
4.2.2 Formation of surface temperature and salinity characteristics	15
4.2.3 Distribution of temperature and salinity characteristics in the ocean interior	33
4.2.4 Formation of water masses	43
4.2.5 Large-scale distribution of water masses	47
4.2.6 Concluding remark	57
4.2.7 References for 4.2	57
4.3 Chemical tracers in the ocean (W. ROETHER, M. RHEIN)	59
4.3.1 Introduction	59
4.3.2 Available tracers	59
4.3.3 Tracer measurement	61
4.3.4 Tracer geochemistry and boundary conditions	64
4.3.4.1 ^{39}Ar	67
4.3.4.2 ^{85}Kr and freons	67
4.3.4.3 Tritium, ^{90}Sr , and ^{137}Cs	69
4.3.4.4 ^{14}C	71
4.3.4.5 Helium	74
4.3.4.6 ^{226}Ra	76
4.3.4.7 ^{228}Ra	77
4.3.4.8 ^{222}Rn	78
4.3.5 Tracer distribution	78
4.3.6 Tracer modeling	101
4.3.7 Outlook	114
4.3.8 Literature	115
4.3.9 References for 4.3	119

4.4 General circulation dynamics (J. WILLEBRAND)	123
4.4.0 List of symbols	123
4.4.1 Introduction	124
4.4.2 Ekman layer	124
4.4.3 Coupling between barotropic and baroclinic flows	126
4.4.4 The wind-driven circulation	128
4.4.4.1 Barotropic vorticity budget	128
4.4.4.2 The Sverdrup balance	128
4.4.4.3 Frictional boundary currents	130
4.4.4.4 Nonlinear effects	131
4.4.4.5 The influence of topography and basin geometry	132
4.4.5 Thermocline dynamics	135
4.4.5.1 Advective-diffusive similarity solutions	135
4.4.5.2 The ideal-fluid approach	137
4.4.5.3 Numerical circulation models	139
4.4.6 Inference of circulation patterns from hydrographic data	141
4.4.6.1 The “dynamical” method	141
4.4.6.2 Inverse methods	144
4.4.6.3 The β -spiral and related methods	146
4.4.6.4 Diagnostic models	148
4.4.7 References for 4.4	149
5 Ocean turbulence	151
5.1 Basic features and classification (H. FRANZ)	151
5.1.0 List of symbols	151
5.1.1 Definition of turbulence	153
5.1.1.1 Turbulence in general	153
5.1.1.2 Kinds of turbulence	153
5.1.1.3 Turbulence in the ocean	154
5.1.2 Main topics of investigation	154
5.1.2.1 The transition from laminar to turbulent flow	154
5.1.2.2 The structure of turbulence	154
5.1.2.2.1 The structure in configuration space	154
5.1.2.2.2 Fourier space structure	155
5.1.2.2.3 State space structure	156
5.1.2.3 The effects of turbulence	157
5.1.3 Foundations and methods	157
5.1.3.1 Mechanics and thermodynamics of incompressible fluids	157
5.1.3.1.1 Eulerian and Lagrangian system	158
5.1.3.1.2 The equations in the Eulerian system	159
5.1.3.2 Statistical physics	161
5.1.3.2.1 Basic statistics	161
5.1.3.2.2 Markov processes and random walk	165
5.1.3.2.3 Dynamical systems	165
5.1.3.3 Dimensional analysis	167
5.1.4 The equations for turbulent flows and results	169
5.1.4.1 The equations	169
5.1.4.1.1 The equations of first order	169
5.1.4.1.2 The equations of second order	171
5.1.4.2 The problem of closure	173
5.1.4.2.1 Eddy viscosity, diffusivity, conductivity	173
5.1.4.2.2 Other approaches	174
5.1.4.3 Results for dynamics of turbulence	174
5.1.4.3.1 The logarithmic velocity wall law	175
5.1.4.3.2 The viscous sublayer	175
5.1.4.3.3 Specialization of stress equation for parallel flow	176
5.1.4.3.4 Isotropic, homogeneous turbulence	177
5.1.4.4 Results for transport by turbulence	178

5.1.5	The spectra of turbulence	184
5.1.5.1	The energy cascade	184
5.1.5.1.1	The universal equilibrium range for energy	185
5.1.5.1.2	Inertial and viscous subrange	185
5.1.5.2	The fluctuation cascade for temperature and soluted admixtures	189
5.1.5.2.1	The universal equilibrium range for temperature and soluted admixtures	189
5.1.5.2.2	Subranges for temperature and soluted admixtures	189
5.1.5.3	The effect of stratification on the spectra	191
5.1.5.4	The range of energy production	194
5.1.5.5	Cascades and energy spectra for twodimensional turbulence	195
5.1.6	Instability of laminar flow and generation of turbulence	196
5.1.6.1	Mechanisms of instability in configuration space	196
5.1.6.1.1	Instability of parallel shear flow	199
5.1.6.1.2	Instable stratification	202
5.1.6.2	Transition to turbulence looked at from Fourier space	202
5.1.6.3	Transition from regular to chaotic motion in state space	202
5.1.6.3.1	Hopf bifurcation	202
5.1.6.3.2	The Landau-Hopf route to turbulence	203
5.1.6.3.3	The Ruelle-Taken route to turbulence	203
5.1.7	Tableau of marine turbulence	205
5.1.7.1	The surface mixed layer	205
5.1.7.2	Thermocline and interior ocean	205
5.1.7.3	The benthic boundary layer	206
5.1.7.4	Comparative tableau	206
5.1.8	References for 5.1	208
5.2	Synoptic-scale variability (P. MÜLLER)	211
5.2.0	List of symbols	211
5.2.1	Introduction	212
5.2.2	Observations	213
5.2.2.1	Illustrative examples	213
5.2.2.2	Basic phenomena	217
5.2.2.3	Kinematics	218
5.2.2.4	Dynamics	226
5.2.3	Equations of motion	229
5.2.3.1	The primitive equations	230
5.2.3.2	Small-scale geostrophic flows	232
5.2.3.3	Dissipation and forcing	237
5.2.3.4	Layer models	240
5.2.3.5	Verical normal modes	241
5.2.4	Basic mechanisms and processes	242
5.2.4.1	Comparison with atmosphere	242
5.2.4.2	Linear motions	242
5.2.4.3	Instabilities	247
5.2.4.4	Wave-mean flow interaction	248
5.2.4.5	Nonlinear interactions	249
5.2.5	Numerical models	253
5.2.6	Respective of dynamics	256
5.2.7	References for 5.2	257
5.3	The surface mixed layer (M. HANTEL)	259
5.3.0	List of symbols	259
5.3.1	Qualitative survey of the surface mixed layer	260
5.3.1.1	Concept of the surface mixed layer	260
5.3.1.2	Qualitative survey of the mechanisms in the surface mixed layer	265
5.3.1.2.1	Mixing	265
5.3.1.2.2	Heating and cooling	267
5.3.1.2.3	Precipitation and deep convection	268
5.3.1.2.4	Advection	269

5.3.2 Observations of the surface mixed layer	269
5.3.2.1 Vertical station profiles of T , S and σ_t	269
5.3.2.2 Vertical bathythermograph profiles	272
5.3.2.3 Transocean hydrographic sections	281
5.3.2.4 Chemical characteristics	287
5.3.2.5 Vertical profiles of horizontal currents	290
5.3.2.6 Vertical profiles of dissipation	291
5.3.2.7 Depth of the surface mixed layer: definition	297
5.3.2.8 Depth of the surface mixed layer: geographical charts	298
5.3.2.9 Depth of the surface mixed layer: variations in time	303
5.3.3 Modeling the surface mixed layer	311
5.3.3.1 Basic equations	311
5.3.3.1.1 Mass budget	312
5.3.3.1.2 Momentum budget	312
5.3.3.1.3 Energy budget	313
5.3.3.1.4 Entropy budget	314
5.3.3.1.5 Equation of state	315
5.3.3.2 Particular mechanisms	315
5.3.3.2.1 Radiation	315
5.3.3.2.2 Temperature conduction	319
5.3.3.2.3 Evaporation	320
5.3.3.2.4 Stress, shear and dissipation	320
5.3.3.2.5 The laminar kinetic energy equation	321
5.3.3.2.6 Advection and convection	321
5.3.3.2.7 Bénard-Rayleigh convection	321
5.3.3.2.8 Hydrostasy and barotropy	323
5.3.3.2.9 Geostrophy and thermal wind	323
5.3.3.2.10 Ekman layer physics	323
5.3.3.2.11 Waves	325
5.3.3.2.12 Instabilities	328
5.3.3.2.13 Turbulent mechanisms	329
5.3.3.2.14 Boundary conditions at the sea-surface	332
5.3.3.2.15 Entrainment	333
5.3.3.2.16 Further physical mechanisms	335
5.3.3.3 Physical models of the surface mixed layer	335
5.3.3.3.1 The turbulent kinetic energy equation for 1d-models	335
5.3.3.3.2 The Kraus-Turner model	336
5.3.3.3.3 Mixed layer models	338
5.3.3.3.4 1d-models	339
5.3.3.3.5 3d-models	340
5.3.4 References for 5.3	341
 5.4 The benthic boundary layer (G. GUST)	345
5.4.0 List of symbols	345
5.4.1 Introduction	346
5.4.2 Standard concepts and observations	346
5.4.2.1 The benthic boundary layer structure	346
5.4.2.2 Logarithmic layers	349
5.4.2.2.1 Synopsis of theory	349
5.4.2.2.2 Experimental approaches	352
5.4.2.2.3 One-dimensional turbulence spectra	353
5.4.3 Observations on natural boundary layer flows	355
5.4.3.1 Hydrodynamically rough and transitional flows	355
5.4.3.2 Elusive bursting phenomenon and intermittency in geophysical boundary layer flows	362
5.4.3.3 Three-dimensional flow structures and helicals	373
5.4.3.4 Suspensions and bed-load – two phase flow phenomena	376
5.4.3.5 The role of bioturbation and biocoating on sediment erosion and flow structure . .	379

5.4.4 Implications of field observations	380
5.4.4.1 Bed forms – sedimentological current meters	380
5.4.4.2 Fluxes and mixing	383
5.4.4.3 Inadequacy of the standard mean flow model	385
5.4.5 Unusual phenomena in the benthic boundary layer	390
5.4.6 Envoy	391
5.4.6.1 Modeling	391
5.4.6.2 Laboratory approaches	392
5.4.6.3 Field measurements	392
5.4.7 References for 5.4	392
5.4.7.1 Textbooks and review articles	392
5.4.7.2 Bibliography	393
