Meteorology

Subvolume a: Thermodynamical and dynamical structures of the global atmosphere

1 Equations and principles of atmospheric large-scale dynamics (G. FISCHER)	1
Introduction	1
1.1 The fundamental laws and their mathematical representation	2
1.1.1 Newton's 2nd law and the equation of motion	2
1.1.2 Mass conservation and continuity equation	2
1.1.3 The gas law and the equation of state	3
1.1.4 First law of thermodynamics	3
1.1.5 The rate of change of kinetic energy	3
1.1.6 The rate of change of vorticity	3
1.1.6.1 The condition of barotropy	4
1.1.7 Vector identities	4
1.2 Spherical coordinates	5
1.2.1 The equations in spherical coordinates and the order of magnitude of individual terms	5
1.2.1.1 Angular momentum	6
1.2.1.2 The vorticity equation	7
1.2.1.3 Vector operation	7
1.2.2 The hydrostatic system of equations	7
1.2.2.1 Vector operations and Helmholtz theorem	8
1.2.2.2 Pressure tendency and Richardson equation	9
1.2.2.3 A forecasting system	10
1.2.2.4 The geostrophic wind	10
1.2.2.5 Turbulent diffusion and the problem of parameterization	10
1.2.2.6 Boundary conditions	11
1.3 General horizontal coordinates	12
1.3.1 Map projections	12
1.3.1.1 Vector operations	12
1.3.1.2 Conformal mapping	12
1.3.1.3 Equations of motion in stereographic coordinates	13
1.3.1.4 Equations of motion in Mercator coordinates	13
1.3.2 Cylindrical coordinates	13
1.3.2.1 The equations of motion	14
1.3.2.2 Vector operations	14
1.3.3 Natural coordinates	14
1.3.3.1 Vector operations and Blaton's law	15
1.3.3.2 Equations of motion	15
1.3.3.3 Gradient wind	15
1.3.4 The β - und f -plane	16
1.3.4.1 Vector operations	16
1.3.4.2 The equations of motion and the vorticity equation	16
1.4 Generalized vertical coordinates	17
1.4.1 The general ζ -system	17
1.4.2 Pressure as vertical coordinate	18
1.4.2.1 Forecasting system	19
1.4.2.2 Geostrophic and thermal wind	19
1.4.2.3 Divergence- and balance equation	20
1.4.2.4 Vorticity equation and its simplifications	20
1.4.2.5 The quasigeostrophic system	21
1.4.2.6 Barotropic model assumptions	22
1.4.3 The σ -coordinate system	22
1.4.3.1 Forecasting system	23

1.4.4 The Θ -system	24
1.4.5 Barotropic models	24
1.4.5.1 Primitive equations	24
1.4.5.2 Quasigeostrophic equations	25
1.4.6 A two-level model	26
1.5 Energy and angular momentum budgets	27
1.5.1 Volume integrals	27
1.5.2 Energy equations in the p -system	28
1.5.2.1 Primitive equations	28
1.5.2.2 Quasigeostrophic system	29
1.5.2.3 Barotropic models	29
1.5.2.4 The available potential energy	30
1.5.2.5 Zonal and eddy energies	31
1.5.3 Angular momentum	33
1.6 Books on dynamical meteorology	34
1.7 List of symbols	35
2 Data for the basic structure of the atmosphere (F. HERBERT)	37
2.1 System of units, absolute constants and parameters	37
2.1.1 The units of the Système International (SI-Units)	37
2.1.2 Conversion tables of various temperature units	40
2.1.3 Important constants and parameters	42
2.1.4 List of symbols	44
2.2 Elementary dynamical relations	45
2.2.1 Useful parameters as a function of latitude	45
2.2.2 Significant wind approximations	52
2.3 Thermodynamic data for dry air and moist air	64
2.3.1 Chemical composition of dry air up to about 25 km altitude	64
2.3.2 Elementary constants and functions	64
2.3.3 Basic relations in moist air (air-vapor mixture)	67
2.3.3.1 Definitions of humidity parameters	67
2.3.3.2 Virtual temperature and virtual temperature increment	67
2.3.3.3 Density of air	74
2.3.3.4 Density of water vapor at saturation equilibrium over a plane surface of pure water or ice	75
2.3.3.5 Potential temperature	87
2.3.4 Relations for H_2O -saturation equilibrium in cloud air	96
2.3.4.1 Saturation vapor pressure; equilibrium diagram of H_2O -phases	96
2.3.4.2 Humidity relations related to saturation equilibrium	99
2.4 Vertical structure and statics of the atmosphere	109
2.4.1 Data of the gravity system	109
2.4.2 Barometric quantities in hydrostatic equilibrium	116
2.4.3 Relations at polytropic stratification	128
2.4.3.1 General case	128
2.4.3.2 Polytropic model atmospheres	129
2.4.3.3 Energy concept of a polytropic atmosphere	131
2.4.4 The ICAO-standard atmosphere	134
2.5 References	139
3 The observed general circulation of the atmosphere (P. SPETH, R. A. MADDEN)	140
3.1 Introduction	140
3.1.1 General remarks	140
3.1.2 Comparison with other results	140
3.1.3 List of symbols	140

3.1.4 Explanation of technical terms	141
3.1.5 Northern hemisphere	143
3.1.5.1 Data and computing procedures	143
3.1.5.2 Time averaged meridional cross sections	145
3.1.5.2.1 Temperature	145
3.1.5.2.2 Geopotential height	147
3.1.5.2.3 Zonal wind	148
3.1.5.2.4 Meridional wind	148
3.1.5.3 Time averaged horizontal distributions	149
3.1.5.3.1 Surface air temperature and sea level pressure	149
3.1.5.3.2 Temperature and geopotential height	151
3.1.5.3.3 Wind	152
3.1.5.4 Large scale waves	152
3.1.5.5 Horizontal transports by the large scale waves	153
3.1.6 Southern hemisphere	157
3.1.6.1 Data and computing procedures	157
3.1.6.2 Time averaged meridional cross sections	158
3.1.6.2.1 Temperature	158
3.1.6.2.2 Geopotential height	159
3.1.6.2.3 Zonal wind	159
3.1.6.2.4 Meridional wind	159
3.1.6.3 Time averaged horizontal distributions	161
3.1.6.3.1 Sea level pressure	161
3.1.6.3.2 Temperature and geopotential height	161
3.1.6.3.3 Wind	162
3.1.6.4 Large-scale waves	162
3.1.6.5 Horizontal transports by the large-scale waves	163
3.1.7 Maintenance of the atmospheric circulation	164
3.1.8 References	165
3.1.8.1 Textbooks and review articles	165
3.1.8.2 Articles	166
3.2 Survey of figures and tables	169
3.3 Figures	177
3.3.1 Introductory remarks	177
3.3.2 Northern hemisphere	177
3.3.2.1 List of figures (survey)	177
3.3.2.2 Time averaged meridional cross sections (MMC)	179
3.3.2.2.1 Temperature	179
3.3.2.2.2 Geopotential height	180
3.3.2.2.3 Zonal wind	180
3.3.2.2.4 Meridional wind	181
3.3.2.3 Time averaged horizontal distributions (HD)	182
3.3.2.3.1 Surface air temperature and sea level pressure	182
3.3.2.3.2 Temperature and geopotential height at different pressure levels	186
3.3.2.3.3 Wind at 200 mbar	214
3.3.2.4 Large-scale waves	218
3.3.2.5 Horizontal transports by the large-scale waves	222
3.3.3 Southern hemisphere	240
3.3.3.1 List of figures (survey)	240
3.3.3.2 Time averaged meridional cross sections (MMC)	242
3.3.3.2.1 Temperature	242
3.3.3.2.2 Geopotential height	242
3.3.3.2.3 Zonal wind	243
3.3.3.3 Time averaged horizontal distributions (HD)	244
3.3.3.3.1 Sea level pressure	244
3.3.3.3.2 Temperature and geopotential height at different pressure levels	246
3.3.3.3.3 Wind at 200 mbar	270

3.3.3.4 Large-scale waves	274
3.3.3.5 Horizontal transports by the large-scale waves	277
3.4 Tables	290
3.4.1 Introductory remarks	290
3.4.2 Northern hemisphere	290
3.4.2.1 List of tables (survey)	290
3.4.2.2 Time averaged meridional cross sections (MMC)	293
3.4.2.2.1 Temperature	293
3.4.2.2.2 Geopotential height	294
3.4.2.2.3 Zonal wind	295
3.4.2.2.4 Meridional wind	296
3.4.2.3 Time averaged horizontal distributions (HD)	297
3.4.2.3.1 Surface air temperature and sea level pressure	298
3.4.2.3.2 Temperature and geopotential height at 500 mbar	306
3.4.2.3.3 Wind at 200 mbar	314
3.4.2.4 Large-scale waves	322
3.4.2.5 Horizontal transports by the large-scale waves	346
3.4.3 Southern hemisphere	397
3.4.3.1 List of tables (survey)	397
3.4.3.2 Time averaged meridional cross sections (MMC)	399
3.4.3.2.1 Temperature	399
3.4.3.2.2 Geopotential height	400
3.4.3.2.3 Zonal wind	401
3.4.3.3 Time averaged horizontal distributions (HD)	401
3.4.3.3.1 Sea level pressure	402
3.4.3.3.2 Temperature and geopotential height at 500 mbar	406
3.4.3.3.3 Wind at 200 mbar	414
3.4.3.4 Large-scale waves	422
3.4.3.5 Horizontal transports by the large-scale waves	438
4 Meteorological organizations (M. SCHLEGEL)	454
4.1 Introductory remarks	454
4.2 Meteorological stations	454
4.2.1 Surface-based sub-system	454
4.2.1.1 Main elements	454
4.2.1.2 Other elements	458
4.2.2 Space-based sub-system	458
4.2.2.1 Operational satellite system (space segment)	458
4.2.2.2 Satellite-data ground receiving stations (ground segment)	458
4.3 World Meteorological Organization (WMO)	460
4.3.1 Historical background of WMO	460
4.3.2 Scientific and technical structure of WMO	461
4.3.3 Relations of the WMO with other international organizations	463
4.3.4 Publications of the WMO	464
4.3.4.1 Mandatory publications	464
4.3.4.2 Documentary series	466
4.4 International programmes	467
4.4.1 The World Weather Watch (WWW)	467
4.4.2 The Global Atmospheric Research Programme (GARP)	468
4.4.3 The World Climate Programme (WCP)	469
4.4.4 The Research and Development Programme (RDP)	469
4.4.5 The Application of Meteorology Programme (AMP)	469
4.4.6 The Hydrology and Water Resources Programme (HWRP)	470
4.5 National weather services	470

4.6	European Centre of Medium Range Weather Forecasts (ECMWF)	477
4.6.1	Historical review	477
4.6.2	Objectives	477
4.6.3	Structure	478
4.6.4	Activities and publications	478
4.7	International non-governmental organizations	479
4.8	Meteorological societies	481
4.9	Meteorological and geophysical journals	482
4.10	List of abbreviations	486
4.11	References	489
