

Contents for subvolumes VI/2b and VI/3b

The content of the present subvolume VI/3b is indicated in roman. Sections of the former subvolume VI/2b (and partly VI/2c) which have not been supplemented or treated in the present subvolume VI/3b are referred to in italic.

In some fields the arrangement of subdivisions has been changed for objective reasons. For a synopsis of these chapters see sects. 4.3, 5.1.1.3, 6.1.0.1, and 6.2, respectively.

		Pages in:
		VI/2b VI/3b
4	The stars	
4.1	<i>Physical parameters of the stars</i> (TH. SCHMIDT-KALER)	1 -
4.1.0	<i>General remarks</i>	1 -
4.1.1	<i>Classification of stellar spectra</i>	1 -
4.1.2	<i>Intrinsic colors and visual absolute magnitudes</i> <i>(calibration of the MK system)</i>	14 -
4.1.3	<i>Hertzsprung-Russell diagram, color-magnitude diagram</i>	25 -
4.1.4	<i>Effective temperatures T_{eff}, bolometric corrections B.C. and luminosities L</i>	451 -
4.1.5	<i>Mass M, radius R, density ρ, surface gravity g</i>	28 -
4.1.6	<i>Rotation of stars</i>	32 -
4.2	<i>Magnitudes and colors</i> (H. SCHNEIDER)	35 1
4.2.0	<i>General remarks</i>	35 1
4.2.1	<i>Data dissemination centers</i>	35 1
4.2.2	<i>Definitions</i>	35 -
4.2.3	<i>General problems in photometry of stars</i>	38 -
4.2.4	<i>Photographic photometry</i>	40 -
4.2.5	<i>Photoelectric photometry</i>	44 2
4.2.5.0	<i>Introduction</i>	44 2
	<i>References for 4.2.0 to 4.2.5.0</i>	6
4.2.5.1	<i>Johnson UBV system</i>	48 8
	<i>References for 4.2.5.1</i>	8
4.2.5.2	<i>The original UBV system, reconstructed at Vilnius</i>	51 -
4.2.5.3	<i>The DDO color system</i>	55 -
4.2.5.4	<i>Strömgren uvby system (incl. Hβ)</i>	57 8
	<i>References for 4.2.5.4</i>	14
4.2.5.5	<i>The 7 color system of Borgman (RQPNNMLK)</i>	59 -
4.2.5.6	<i>The 4 color system uvgr</i>	60 -

4.2.5.7	<i>Geneva 7 color system</i>	61	14
	References for 4.2.5.7		16
4.2.5.8	<i>The Wood 12 color system (Strömgren extension)</i>	63	-
4.2.5.9	<i>The Vilnius WBVR color system</i>	64	-
4.2.5.10	<i>The Vilnius UPXYZVS color system</i>	66	-
4.2.5.11	<i>The 13 color system (Johnson, Mitchell, Latham)</i>	68	-
4.2.5.12	<i>The Johnson color system UBVIJK...Q</i>	71	-
4.2.5.13	<i>The color system used in the southern hemisphere</i>	74	-
4.2.5.14	<i>Walraven VBLUW system</i>	76	17
	References for 4.2.5.14		18
4.2.5.15	<i>UBVRI system (incl. Cousins V(RI)_c, subsect. 4.2.5.16 in LB VI/2b)</i>	79	18
	References for 4.2.5.15		21
4.2.5.16	<i>The Cousins (Cape) VRI color system</i>	82	-
4.2.5.17	<i>Graphs of some response functions S(λ)</i>	83	-
4.2.5.18	Infrared photometry (< 30 μm)	-	22
4.2.5.18.1	Near-infrared photometry (JHKLM)	-	23
4.2.5.18.2	Mid-infrared photometry (5 to 30 μm)	-	25
	References for 4.2.5.18		27
4.2.5.19	CCD photometry	-	28
4.2.5.19.1	Photometric reduction algorithms, methods and software packages	-	28
4.2.5.19.2	Technical realization of photometric systems	-	29
4.2.5.19.3	Standard fields	-	29
	References for 4.2.5.19		29
4.2.5.20	Photometry from space	-	30
4.2.5.20.1	Infrared Astronomical Satellite (IRAS)	-	30
4.2.5.20.2	TYCHO	-	34
4.2.5.20.3	Infrared Space Observatory (ISO)	-	35
4.2.5.20.4	Hubble Space Telescope (HST)	-	37
	References for 4.2.5.20		40
4.3	Physics of stellar atmospheres		
	(B. BASCHEK, K. BUTLER, M. SCHOLZ, P. ULMENSCHNEIDER, R. WEHRSE)	91	41
4.3.1	Radiative transfer		42
4.3.1.1	Fast numerical methods for 1D media		42
4.3.1.2	Methods for moving envelopes		42
4.3.1.3	Methods for multidimensional configurations		43
	References for 4.3.1		44
4.3.2	Line blanketing		44
4.3.2.1	Statistical treatment		44
4.3.2.2	Individual lines outside LTE		45
	References for 4.3.2		45
4.3.3	Convective energy transport		46
	References for 4.3.3		47
4.3.4	Chromospheres and coronae		48
4.3.4.1	Mechanical heating and modification of the energy equation		48
4.3.4.1.1	Classification of heating mechanisms		48
4.3.4.1.2	Simple heating laws		48
4.3.4.1.3	Hydrodynamic shock heating laws		49
4.3.4.1.4	Magnetic heating laws		50
4.3.4.2	Modelling of chromospheres and coronae		50
4.3.4.2.1	Empirical chromosphere models		50

4.3.4.2.2	Empirical transition-layer models	51
4.3.4.2.3	Empirical corona models	51
4.3.4.2.4	Theoretical chromosphere models	51
4.3.4.2.5	Theoretical corona models	51
4.3.4.2.6	Tube models and other special geometries	52
4.3.4.3	Coronae of accretion disks	52
	References for 4.3.4	52
4.3.5	Stellar winds	55
4.3.5.1	Empirical mass loss	55
4.3.5.2	Thermal winds	55
4.3.5.3	Winds driven by radiation pressure	55
4.3.5.4	Pulsation-driven winds	55
4.3.5.5	Wave-driven winds	56
	References for 4.3.5	56
4.3.6	Atomic and molecular data	57
4.3.6.1	Atomic energies and wavelengths	58
4.3.6.2	Collisional data	58
4.3.6.3	Line broadening	58
4.3.6.4	Radiative data	58
4.3.6.5	Molecular data	59
	References for 4.3.6	59
4.3.7	Atmospheres of accretion disks	60
	References for 4.3.7	60
	Appendix (Errata to LB VI/2b, sect. 4.3)	61
4.4	Stellar structure and evolution (M.F. EL EID, C. DE LOORE)	152
4.4.0	<i>List of symbols</i>	152
4.4.1	Equations of stellar structure	154
4.4.2	Properties of stellar matter	155
4.4.2.1	The equation of state	155
4.4.2.2	<i>Functions V_{ad} and C_p</i>	159
4.4.2.3	Stellar opacities	159
4.4.2.4	Nuclear burning phases in stars	181
4.4.2.4.1	Hydrogen burning	181
4.4.2.4.2	Helium burning	185
4.4.2.4.3	Carbon burning	186
4.4.2.4.4	Advanced burning phases and nuclear statistical equilibrium	186
4.4.2.4.5	Screening factors	187
4.4.2.4.6	Neutrino loss rates	187
4.4.2.4.7	Network for thermonuclear reactions	-
4.4.3	Model computations	188
4.4.3.1	<i>Main-sequence stars</i>	188
4.4.3.2	<i>Evolved stars</i>	190
4.4.3.3	<i>Stars with special properties</i>	193
4.4.3.4	Low- and intermediate mass stars	-
4.4.3.5	Massive stars	-
4.4.3.6	The progenitor of SN 1987A	-
4.4.3.7	Late evolutionary phases	-
4.4.3.8	Binary stars	-
4.4.3.8.1	Orbital elements: their variation due to mass exchange	-
4.4.3.8.2	Model computations for low- and intermediate-mass close binaries	107

4.4.3.8.3	Model computations for massive close binaries	-	110
4.4.3.8.4	O-type binaries and Wolf-Rayet binaries	-	113
4.4.3.8.5	Final stages of close binary evolution	-	114
4.4.3.8.6	The origin of low-mass X-ray binaries (LMXRB)	-	115
4.4.3.8.7	Origin and evolution of massive X-ray binaries (MXRB)	-	116
4.4.3.8.8	Final evolution of massive X-ray binaries	-	119

5 Special types of stars

5.1	Variable stars (H.W. DUERBECK, W.C. SEITTER)	197	127
5.1.0	Abbreviations and notations	197	127
5.1.1	Definitions and general remarks	198	128
5.1.1.1	General catalogues and bibliographies	198	128
5.1.1.2	Monographs	198	128
5.1.1.3	Notation and classification	198	128
	References for 5.1.1		131
5.1.2	Pulsating variables		132
5.1.2.0	Generalities		132
5.1.2.0.1	Radial and nonradial stellar pulsations		132
5.1.2.0.2	Fourier decomposition technique		134
5.1.2.1	Cepheids – CEP		134
5.1.2.1.1	Classical Cepheids – DCEP		134
5.1.2.1.2	W Virginis stars – CW		137
5.1.2.1.3	BL Bootis stars (Anomalous Cepheids) – BL BOO		138
5.1.2.2	RR Lyrae stars – RR		139
5.1.2.3	SX Phoenicis stars (Dwarf Cepheids) – SXPHE		141
5.1.2.4	δ Scuti stars – DSCT		142
5.1.2.5	RV Tauri stars – RV		144
5.1.2.6	Mira Ceti variables – M		145
5.1.2.7	Semiregular variables – SR		147
5.1.2.8	Slow irregular variables stars – L		149
5.1.2.9	β Cephei stars (β Canis Majoris stars) – BCEP		149
5.1.2.10	PV Telescopii variables – PVTEL		151
5.1.2.11	α Cygni variables – ACYG		151
5.1.2.12	ZZ Ceti stars – ZZ		152
	References for 5.1.2		154
5.1.3	Rotating variables		158
5.1.3.1	SX Arietis variables (helium variables) – SXARI		158
5.1.3.2	α ² Canum Venaticorum variables – ACV		158
5.1.3.3	Ellipsoidal variables – ELL		158
5.1.3.4	Reflection variables – R		159
5.1.3.5	FK Comae variables – FKCOM		159
5.1.3.6	BY Draconis variables – BY		160
5.1.3.7	Pulsars – PSR		161
	References for 5.1.3		161
5.1.4	Supernovae and cataclysmic variables		162
5.1.4.1	Supernovae – SN		162
5.1.4.1.1	Type I Supernovae – SN I		164
5.1.4.1.2	Type II Supernovae – SN II		165
5.1.4.1.3	SN 1987A		166

5.1.4.2	Novae – N	169	
5.1.4.3	Novalike variables (nonmagnetic systems) – NL	173	
5.1.4.4	AM Herculis stars (magnetic systems, polars) – AM	174	
5.1.4.5	U Geminorum stars (dwarf novae) – UG	175	
5.1.4.6	Z Andromedae stars (symbiotic stars) – ZAND	177	
	References for 5.1.4	179	
5.1.5	Eruptive variables	183	
5.1.5.1	S Doradus variables (Hubble-Sandage variables) – SDOR	183	
5.1.5.2	Wolf-Rayet variables – WR	184	
5.1.5.3	γ Cassiopeiae variables – GCAS	185	
5.1.5.4	Variable Be stars – BE	185	
5.1.5.5	R Coronae Borealis stars – RCB	186	
5.1.5.6	RS Canum Venaticorum stars – RS	187	
5.1.5.7	UV Ceti stars (flare stars) – UV	188	
5.1.5.8	FU Orionis variables – FU	190	
5.1.5.9	Irregular variables – I	191	
	References for 5.1.5	193	
5.2	<i>Peculiar stars</i> (W.C. SEITTER, H.W. DUERBECK)	269	VI/3c
5.3	Protostars, pre-main sequence objects (I. APPENZELLER)	357	196
5.3.1	Definitions	357	196
5.3.2	<i>List of symbols</i>	357	-
5.3.3	Distribution of protostars and pre-main sequence (PMS) objects	358	196
5.3.4	Low-mass protostars and PMS stars	358	197
5.3.4.1	Evolutionary tracks	358	197
5.3.4.2	T Tauri stars	360	197
5.3.5	Massive protostars	361	199
5.3.6	Other very young objects related to the final stages of star formation or very early stellar evolution	362	199
	References for 5.3	200	
5.4	Planetary nebulae (L.H. ALLER)	364	204
5.4.1	Introduction	364	204
5.4.2	Catalogues of planetary nebulae	-	204
5.4.3	Distances of planetary nebulae	-	205
5.4.4	Use of planetary nebulae to determine distances of galaxies	-	205
5.4.5	Basic physical processes in gaseous nebulae	-	206
5.4.6	Basic atomic data	-	206
5.4.7	Molecules and dust grains	-	207
5.4.8	Morphologies and structures of planetary nebulae	-	207
5.4.9	Theoretical models of nebular structure and evolution	-	208
5.4.10	Classifications of planetary nebulae	-	208
5.4.11	Chemical compositions of planetary nebulae	-	208
5.4.12	Magellanic Clouds and other galaxies	-	209
5.4.13	The transitional stage, AGB to PN	-	209
5.4.14	Binary stars and planetary nebulae	-	210
5.4.15	Central stars of planetary nebulae (PNN)	-	210
5.4.16	Tables of some basic data	-	211
	References for 5.4		215

5.5	White dwarfs (WD) (V. WEIDEMANN)	373	219	
5.5.1	<i>General</i>	373	-	
5.5.2	Luminosity function, space density	373	219	
5.5.3	Spectral types	374	219	
5.5.3.1	Spectral classification	374	219	
5.5.3.2	<i>Magnetic white dwarfs</i>	374	-	
5.5.3.3	Variable DA (or ZZ Ceti) stars and other pulsating white dwarfs.			
	Asteroseismology	374	220	
5.5.4	Catalogues, observation lists	375	220	
5.5.5	Atmospheres, HR diagram	376	220	
5.5.6	Radii, masses	377	221	
5.5.7	Interior, envelopes	378	221	
5.5.8	Evolution, age	379	221	
	References for 5.5		221	
5.6	Compact objects	VI/2c:	1	223
5.6.1	<i>Neutron stars</i> (M. GREWING)	VI/2c:	1	VI/3c
5.6.2	<i>Radiopulsars</i> (M. GREWING)	VI/2c:	10	VI/3c
5.6.3	Pulsating X-ray sources (J. TRÜMPER, H.H. FINK)	VI/2c:	24	223
5.6.3.1	General properties	VI/2c:	24	223
5.6.3.1.1	Periodic pulsations in HMXB		-	223
5.6.3.1.2	Quasi-periodic oscillations (QPO) and noise in LMXB		-	228
5.6.3.1.2.1	Z-sources		-	228
5.6.3.1.2.2	Atoll sources		-	231
5.6.3.1.3	X-ray emission of radio pulsars		-	233
5.6.3.2	<i>Determination of binary-system parameters</i>	VI/2c:	26	-
5.6.3.3	<i>Neutron star properties as derived from observations of pulsating X-ray sources</i>	VI/2c:	28	-
	References for 5.6.3			235
5.6.4	X-ray bursters (J. TRÜMPER, H.H. FINK)	VI/2c:	30	238
5.6.4.1	General properties		-	238
5.6.4.2	Mass-radius relation of neutron stars		-	242
5.6.4.3	The Rapid Burster		-	244
	References for 5.6.4			246
5.6.5	Black holes (J. TRÜMPER, H.H. FINK)	VI/2c:	32	251
	References for 5.6.5			254
5.7	X-ray and γ-ray sources (H.H. FINK, J. TRÜMPER)	VI/2c:	33	257
5.7.1	X-ray sources	VI/2c:	33	257
5.7.1.1	Overview	VI/2c:	33	257
5.7.1.2	Sky surveys	VI/2c:	36	258
5.7.1.3	<i>X-ray emission processes</i>	VI/2c:	36	-
5.7.2	γ -ray sources	VI/2c:	40	258
5.7.2.1	Overview	VI/2c:	40	258
5.7.2.2	γ -radiation processes	VI/2c:	42	-
