Nucleic acids

Subvolume c: Spectroscopic and kinetic data, physical data I

3 Spectroscopic and kinetic data

3.1	Electronic circular dichroism (CD) spectroscopy of nucleic acids (W.C. JOHNSON)	1
3.1.1	Introduction	1
3.1.2	Methods	1
3.1.3	Comments on the CD data	2
3.1.4	Data	3
3.1.4.1	CD spectra for nucleic acid monomers	3
3.1.4.2	CD spectra for dinucleotides	5
3.1.4.3	CD spectra for homopolynucleotides	9
3.1.4.4	CD spectra for other synthetic polynucleotides	13
3.1.4.5	CD spectra for natural nucleic acids	21
3.1.5	References for 3.1	24
3.2	Melting temperatures of polynucleotide complexes (W. GUSCHLBAUER)	25
3.2.1	Introduction	25
3.2.1.1	Arrangement of tables	25
3.2.1.2	Methodology of melting temperature measurements	25
3.2.1.3	Data presentation	25
3.2.1.4	List of constituents of nucleotides	26
3.2.2	Data	35
3.2.2.1	Melting temperatures of polydeoxyribonucleotide hetero-complexes	35
3.2.2.2	Melting temperatures of polyribonucleotide hetero-complexes	38
3.2.2.3	Melting temperatures of hybrid hetero-complexes	46
3.2.2.4	Melting temperatures of homo-complexes	49
3.2.2.5	pK values of homo-complexes	53
3.2.3	References for 3.2	56
3.3	The classical Raman, resonance Raman, and infrared spectroscopy of nucleic acids (W.L. PETICOLAS)	60
3.3.1	Introduction	60
3.3.2	The theory of the relation between vibrational frequencies and conformation	60
3.3.3	Theory of Raman intensity and Raman hypochromism	61
3.3.4	Characterization of experimentally induced changes in DNA conformation by Raman spectroscopy	61
3.3.4.1	Raman data on the melting transitions in RNA and DNA	62
3.3.4.2	Raman data on environmentally induced changes in the B conformation of DNA	62
3.3.4.3	The B to A transition in fibers, films, crystals, and solutions of DNA	63
3.3.4.4	Raman characterization of the B to Z transition in d(CGCGCG) and comparison with the A form of r(CGCGCG)	64
3.3.4.5	Assignment of the vibration of the nucleic acid bases	64
3.3.5	The use of Raman spectroscopy to solve the conformational code of DNA	64
3.3.6	The resonance Raman effect in nucleic acids	65
3.3.7	Low frequency Raman modes and dynamics of DNA	65
3.3.8	The characterization of the conformations of nucleic acids using infrared spectroscopy	65
3.3.8.1	Low frequency infrared spectroscopy as a method of studying the dynamics of DNA	66
3.3.9	Data on Raman spectroscopy of nucleic acids	66
3.3.10	References for 3.3	86

3.4 NMR data on oligonucleotides (C. ALTONA)	88
3.4.1 General remarks	88
3.4.1.1 Contents	88
3.4.1.2 Selection of data	88
3.4.2 Proton NMR spectroscopy of oligomers	88
3.4.2.1 General considerations	88
3.4.2.2 Chemical shifts and assignment	89
3.4.2.3 Coupling constants	90
3.4.3 Structure and conformations of oligomers	90
3.4.3.1 Notation	90
3.4.3.2 Types of structure	90
3.4.3.3 Information content of NMR spectra	91
3.4.3.3.1 Structural information	91
3.4.3.3.2 Thermodynamic information	92
3.4.3.3.3 Kinetic information	92
3.4.4 Organization of the oligonucleotide ^1H NMR tables	92
3.4.4.1 Subdivisions	92
3.4.4.2 Contents of table captions, symbols and abbreviations	93
3.4.4.3 Contents of tables	94
3.4.4.4 Supplementary material	94
3.4.4.5 List of sequences investigated	95
3.4.5 Data	100
3.4.5.1 Coupling constants of RNA sequences	100
3.4.5.2 Chemical shifts of RNA sequences	108
3.4.5.3 Coupling constants of DNA sequences and RNA-DNA hybrids	129
3.4.5.4 Chemical shifts of DNA sequences and RNA-DNA hybrids	143
3.4.6 References for 3.4	186
3.5 Survey of chemical shift values in tRNA (C.W. HILBERS, J.A.L.I. WALTERS)	191
3.5.1 Introduction	191
3.5.2 Data on ^1H , ^{13}C and ^{15}N nuclei resonances in tRNAs	192
3.5.2.1 Imino protons, methyl protons and ^{15}N of yeast tRNA $^{\text{Phe}}$	192
3.5.2.2 ^{13}C -methyl of unfractionated yeast tRNA	193
3.5.2.3 Methyl protons, ^{13}C -methyl and ^{13}C -sugar of [^{13}C] methyl-enriched yeast tRNA $^{\text{Phe}}$	194
3.5.2.4 ^{13}C -methyl of methylated nucleosides of <i>E. coli</i> tRNA	194
3.5.2.5 ^{13}C of [^{13}C] <i>E. coli</i> tRNA	195
3.5.2.6 Imino protons of yeast tRNA $^{\text{Asp}}$	195
3.5.2.7 Imino and ring protons of <i>E. coli</i> tRNA $^{\text{Val}}$	196
3.5.2.8 Imino protons and non exchangeable ring protons of <i>Thermus thermophilus</i> tRNA $^{\text{Ile}}_{1a}$ and/or imino protons of <i>E. coli</i> tRNA $^{\text{Ile}}_{1a}$	197
3.5.2.9 Imino protons of <i>E. coli</i> tRNA $^{\text{Phe}}$	198
3.5.2.10 Imino protons of <i>E. coli</i> tRNA $^{\text{Gly}}_3$	198
3.5.2.11 ^{13}C of unfractionated yeast and <i>E. coli</i> tRNA	199
3.5.3 References for 3.5	200
3.6 Thermodynamics and kinetics of base-pairing and of DNA and RNA self-assembly and helix-coil transition (D.H. TURNER, N. SUGIMOTO, S.M. FREIER)	201
3.6.1 Introduction	201
3.6.2 Methods	201
3.6.3 Arrangement of data	202
3.6.4 List of symbols and abbreviations	203
3.6.5 Data	204
3.6.5.1 Thermodynamic parameters for duplex formation by RNA oligonucleotides	204
3.6.5.2 Thermodynamic parameters for oligonucleotides with loops	208
3.6.5.3 Thermodynamic parameters for coil-helix transition in single stranded RNA	210
3.6.5.4 Thermodynamic parameters for duplex formation by DNA oligonucleotides	210
3.6.5.5 Thermodynamic parameters for duplex formation by DNA oligonucleotides containing mismatches	211
3.6.5.6 Thermodynamic parameters for helix initiation and propagation in 1 M NaCl	213

3.6.5.7	Bimolecular helix initiation for RNA and DNA	214
3.6.5.8	Free energy increments for internal G:U pairs in RNA oligonucleotides	214
3.6.5.9	Free energy parameters for RNA helix termini	215
3.6.5.10	Free energy increments for loops	216
3.6.5.11	Thermodynamic parameters for single mismatches in DNA oligonucleotides	217
3.6.5.12	Kinetic parameters for double helix formation by oligonucleotides	218
3.6.5.13	Kinetics of hairpin loop formation by oligomers	220
3.6.5.14	Kinetic parameters for binding between tRNA and oligonucleotides	221
3.6.5.15	Kinetics of tRNA associations through complementary anticodons	222
3.6.5.16	Kinetics of double helix formation for polynucleotides	223
3.6.5.17	Kinetic parameters for intramolecular conformational changes in RNA	224
3.6.5.18	Kinetic parameters for stacking in single strands	225
3.6.6	References for 3.6	226
4	Physical data for nucleic acids and their constituents	
4.1	Energetics of DNA and RNA double helices (M.D. FRANK-KAMENETSKII)	228
4.1.1	Introduction	228
4.1.1.1	General remarks	228
4.1.1.2	List of symbols and abbreviations	228
4.1.2	Bending and torsional rigidity of double helices	230
4.1.2.1	Elastic rod model	230
4.1.2.1.1	General relations	230
4.1.2.1.2	Limitations of the elastic rod model	230
4.1.2.2	Methods of measurement	230
4.1.2.2.1	Bending rigidity	230
4.1.2.2.2	Torsional rigidity	231
4.1.2.3	Values of parameters	231
4.1.2.3.1	Bending rigidity	231
4.1.2.3.2	Torsional rigidity	232
4.1.3	Energetics of the helix-coil transition	232
4.1.3.1	Theoretical models	232
4.1.3.1.1	Basic model	232
4.1.3.1.2	Allowance for heterogeneous stacking	233
4.1.3.2	Methods of measurement	234
4.1.3.2.1	Determination of parameters of the basic model	234
4.1.3.2.2	Determination of parameters of heterogeneous stacking	234
4.1.3.3	Values of parameters	235
4.1.3.3.1	Parameters of the basic model	235
4.1.3.3.2	Parameters of heterogeneous stacking for DNA	236
4.1.4	Energetics of the B-Z transition	236
4.1.4.1	Theoretical models of the B-Z transition	236
4.1.4.1.1	Dinucleotide model	237
4.1.4.1.2	Mononucleotide model	237
4.1.4.2	Methods of measurement	237
4.1.4.3	Values of parameters	237
4.1.4.3.1	Parameters of the dinucleotide model	238
4.1.4.3.2	Parameters of the mononucleotide model	238
4.1.5	References for 4.1	239
4.2	Calorimetric studies on DNAs and RNAs (H.H. KLUMP)	241
4.2.1	Introduction	241
4.2.1.1	List of symbols and abbreviations	241
4.2.1.2	Experimental method	241
4.2.1.3	Stacking and base-pairing in DNAs	242
4.2.2	Data	243
4.2.2.1	Conformational transitions in helical polynucleotides	243
4.2.2.1.1	Energetics of helix coil transitions in DNAs	243
4.2.2.1.2	Energetics of helix coil transitions in synthetic polynucleotides	244
4.2.2.1.3	Influence of nearest neighbors on energetics of base pairing in polynucleotides	245

4.2.2.2	Property diagrams of all double helical polynucleotides	246
4.2.2.2.1	Property diagrams for all synthetic polynucleotides with B-DNA structure	246
4.2.2.2.2	Property diagrams for all native DNA sequences	248
4.2.2.3	Energetics of helix/helix transitions	250
4.2.2.3.1	Energetics of the B-Z DNA transition	250
4.2.2.3.2	Energetics of the A-Z RNA transition	251
4.2.2.3.3	Energetics of helix-disproportionation reactions	251
4.2.2.3.4	Energetics of the strand-displacement reactions	252
4.2.2.4	Thermodynamics of RNA single-strand unfolding	253
4.2.2.5	Molecular forces that stabilize DNA sequences	254
4.2.2.5.1	Discrimination between sequence- and solvent-effects	254
4.2.2.6	Concluding remarks	255
4.2.3	References for 4.2	255
4.3	Solution properties of DNA: sedimentation, scattering of light, X-rays and neutrons, and viscometry (H. EISENBERG)	257
4.3.1	Introduction	257
4.3.1.1	General remarks	257
4.3.1.2	List of frequently used symbols and abbreviations	257
4.3.2	Methods	258
4.3.2.1	Ultracentrifugation, partial volumes and interaction parameters	258
4.3.2.2	Total intensity light scattering	260
4.3.2.3	Small angle X-ray and neutron scattering	261
4.3.2.4	Viscometry	262
4.3.2.5	Quasielastic light scattering	263
4.3.3	The persistent chain	263
4.3.4	Data on solution properties	265
4.3.4.1	Partial volumes and interaction parameters in multicomponent systems	265
4.3.4.2	Hydration of DNA	265
4.3.4.3	Molecular parameters of aqueous solutions of linear X-DNA (X = Na, Cs, Li, Rb)	268
4.3.4.4	Calculated neutron scattering length increments for linear CsDNA	270
4.3.4.5	Molecular parameters of linear ColE1 DNA	271
4.3.4.6	Physical chemical properties of ColE 1-plasmid DNA in solution	272
4.3.4.7	Molecular size and sedimentation coefficient for PM 2 Hae III uniformly sized NaDNA fragments	273
4.3.4.8	Persistence length and excluded volume parameters for high molar mass linear T7 DNA	273
4.3.4.9	Temperature dependence of DNA apparent volumes	274
4.3.5	References for 4.3	274
4.4	Interaction of DNA and RNA with metal ions (J.J. BUTZOW, G.L. EICHHORN, Y.A. SHIN)	277
4.4.1	Introduction	277
4.4.1.1	General remarks on metal ion interactions with DNA and RNA	277
4.4.1.2	Organization of the sections	277
4.4.1.3	List of symbols and abbreviations	278
4.4.2	Data on interaction of metal ions with DNA, synthetic polydeoxynucleotides and synthetic polyribonucleotides	282
4.4.2.1	Binding of metal ions	282
4.4.2.1.1	Association constants	282
4.4.2.1.2	Binding characteristics	288
4.4.2.2	Effects of metal ion binding on conformation of DNA	296
4.4.2.2.1	Helix coil transition (melting temperature)	296
4.4.2.2.2	Transition between right- and left-handed helix	320
4.4.2.2.3	Other conformational changes: secondary (except right-left handed), tertiary, quaternary structures	334
4.4.2.2.4	Hydrodynamic property changes	341
4.4.3	Data on interaction of metal ions with RNA	345
4.4.3.1	Binding of metal ions	345
4.4.3.1.1	Types of metal ion binding sites in tRNAs	345

4.4.3.1.2 Details of metal ion binding sites in RNAs	346
4.4.3.1.3 Association constants for metal ion-tRNA interactions	364
4.4.3.2 Effects of metal ion binding on conformation of RNA	368
4.4.3.2.1 Effects on secondary structure	368
4.4.3.2.2 Effects on tertiary structure	376
4.4.3.2.3 Thermal melting effects – tRNAs	390
4.4.4 Data on metal ion catalyzed degradation of RNAs and polyribonucleotides (non-oxidative processes)	394
4.4.5 Data on metal ion catalyzed degradation of DNAs and polydeoxynucleotides (redox processes)	411
4.4.6 References for 4.4	434
