Nucleic acids

Subvolume d: Physical data II, theoretical investigations

4 Physical data for nucleic acids and their constituents

For sections 4.1–4.4 see Subvolume VII/1c

4.5	Physical data of supercoiled DNA (W.R. BAUER)	1
4.5.1	Introduction and definition of terms	1
4.5.1.0	General remarks	1
4.5.1.1	List of frequently used symbols and abbreviations	1
4.5.1.2	Fundamental relationships	2
4.5.1.2.1	Curves and vectors	2
4.5.1.2.2	The linking number, Lk	3
4.5.1.2.3	The twist, Tw	3
4.5.1.2.4	The writhe, Wr	4
4.5.1.2.5	Relationships among topological and geometric quantities	4
4.5.1.3	Surface-wrapped DNA	4
4.5.2	Determination of superhelix density	5
4.5.2.1	Introduction	5
4.5.2.1.1	Definitions	5
4.5.2.1.2	Correction factors	5
4.5.2.2	Description of methods	5
4.5.3	Sedimentation properties of closed circular DNA	8
4.5.3.1	General description	8
4.5.3.2	Sedimentation velocity at neutral pH	8
4.5.3.3	Sedimentation velocity at acid and alkaline pH	9
4.5.3.4	Sedimentation velocity in chaotropic solvents	10
4.5.3.5	Buoyant sedimentation equilibrium under denaturing conditions	10
4.5.4	Gel electrophoresis of closed circular DNA	10
4.5.4.1	Agarose gels	10
4.5.4.2	Pulsed-field agarose gels	11
4.5.4.3	Small circular DNAs	11
4.5.5	Energy parameters for closed circular DNA	12
4.5.5.1	Subject matter and description of tables	12
4.5.5.2	Free energy for closed circular DNA	12
4.5.5.2.1	Free energy of superhelix formation	12
4.5.5.2.2	Length dependence of free energy	13
4.5.5.3	Other thermodynamic and elastic constants	14
4.5.6	Ligand binding to closed circular DNA	15
4.5.6.1	Introduction	15
4.5.6.2	Description of methodology	15
4.5.6.2.1	Definitions	15
4.5.6.2.2	Quantitative relationships	15
4.5.6.2.3	Hydrodynamic methods	16
4.5.6.2.4	Non-hydrodynamic methods	16
4.5.6.3	Estimates of ϕ , the EtBr unwinding angle	17
4.5.6.4	Unwinding angles of representative DNA – unwinding drugs determined with closed circular DNA (binding modes A, B)	17
4.5.6.5	Ligands that bind covalently or that produce chain scissions (binding modes C, D)	19
4.5.6.6	Binding of proteins to DNA	19

4.5.7	Helix-coil transitions	21
4.5.7.1	Subject matter and description of tables	21
4.5.7.2	Effect of DNA closure on alkali and thermal DNA melting	21
4.5.7.3	Single-strand binding probes and chemical modification	22
4.5.8	Local structural transitions	24
4.5.8.1	Subject matter and description of tables	24
4.5.8.2	Assays for DNA transitions	25
4.5.8.3	σ -dependent Z-DNA and cruciform transitions	26
4.5.9	References for 4.5	28
4.6	HPLC of oligonucleotides and natural nucleic acids (D. RIESNER)	31
4.6.1	Introduction	31
4.6.1.1	Subject	31
4.6.1.2	List of symbols and abbreviations	31
4.6.2	Techniques	32
4.6.2.1	Size-exclusion or gel permeation chromatography	32
4.6.2.2	Anion-exchange chromatography	33
4.6.2.3	Reversed phase and hydrophobic interaction chromatography	34
4.6.2.4	RPC-5 and other mixed-mode chromatography	35
4.6.2.5	LC, HPLC, FPLC, and solid phase extraction	35
4.6.2.6	Sample preparation and recovery	36
4.6.3	Applications	37
4.6.3.1	Oligonucleotides	37
4.6.3.2	Natural RNA and polyribonucleotides	43
4.6.3.3	DNA restriction fragments	48
4.6.3.4	Plasmids and phages	53
4.6.3.5	RNA transcripts, RNA-DNA hybrids, single-stranded (ss) and double-stranded (ds) DNA	56
4.6.3.6	Pre-purification and recovery of nucleic acids	58
4.6.4	References for 4.6	59
4.7	Physical data of DNA- and RNA interactions with drugs, dyes and other small organic compounds (CHR. ZIMMER, U. WÄHNERT)	61
4.7.1	Introduction	61
4.7.1.1	General remarks	61
4.7.1.2	List of symbols and abbreviations	61
4.7.1.3	Experimental measurements	62
4.7.1.3.1	Absorbance	62
4.7.1.3.2	Fluorescence	63
4.7.1.3.3	Melting temperature curves	63
4.7.1.3.4	Circular dichroism	63
4.7.1.3.5	Nuclear magnetic resonance	64
4.7.1.3.6	Hydrodynamic techniques	64
4.7.1.3.7	Binding parameters and thermodynamics	65
4.7.2	Data	66
4.7.2.1	Chemical structures of ligands	66
4.7.2.2	Spectral data	85
4.7.2.2.1	Absorption data	85
4.7.2.2.2	Thermal melting	98
4.7.2.2.3	Fluorescence	114
4.7.2.2.4	Circular dichroism	121
4.7.2.3	Nuclear magnetic resonance	133
4.7.2.4	Hydrodynamic data (viscosity, helix unwinding, buoyant density)	139
4.7.2.5	Binding parameters	158
4.7.2.6	Thermodynamics, kinetics and theoretical computations	184
4.7.3	References for 4.7	190
4.8	Viroids and viroid-like RNAs (D. RIESNER, G. STEGER)	194
4.8.1	Introduction	194

4.8.1.1	Biological subject	194
4.8.1.2	List of symbols and abbreviations	194
4.8.2	Sequences and homologies	196
4.8.2.1	Methods	196
4.8.2.1.1	Sequencing	196
4.8.2.1.2	Homology finding	196
4.8.2.2	Listing of size, sequence, and homology	196
4.8.3	Size and shape in solution	202
4.8.3.1	Subject	202
4.8.3.2	Electron microscopy	202
4.8.3.2.1	Methods	203
4.8.3.2.1.1	Conditions to maintain a defined structure of the RNAs	203
4.8.3.2.1.2	Spreading, staining, and observation	203
4.8.3.2.2	Results	203
4.8.3.3	Hydrodynamic studies	203
4.8.3.3.1	Methods	203
4.8.3.3.1.1	Sedimentation coefficients from analytical ultracentrifugation	203
4.8.3.3.2	Results	204
4.8.3.3.2.1	Sedimentation coefficients s	204
4.8.3.3.2.2	Frictional ratio f/f_0 and axial ratio a/b	204
4.8.3.3.2.3	Persistence length P	205
4.8.3.4	Gel electrophoretic analysis	205
4.8.3.4.1	Methods	205
4.8.3.4.2	Results	205
4.8.4	Calculation of secondary structures and their transitions	209
4.8.4.1	Methods	209
4.8.4.2	Secondary structures	210
4.8.4.3	Structural transitions	210
4.8.4.3.1	Premelting regions of PSTV, CEV, and CSV	210
4.8.4.3.2	Main transition of PSTV, CEV, and CSV	210
4.8.4.3.3	Linear viroids, replication intermediates	210
4.8.5	Thermodynamic experiments	222
4.8.5.1	Methods	222
4.8.5.2	Transitions of viroids	223
4.8.5.2.1	Transition of PSTV, CEV, and CSV	223
4.8.5.2.2	Transition of PSTV transcripts	223
4.8.5.2.3	Transition of cadang-cadang RNA	223
4.8.5.2.4	Transition of ASBV	224
4.8.5.3	Transition of virusoids	224
4.8.5.4	Dependence upon solvent conditions	224
4.8.5.5	Temperature-gradient gel electrophoresis of circular and linear PSTV molecules and oligomeric PSTV transcripts	224
4.8.6	Kinetic data of conformational transitions of viroids	232
4.8.6.1	Subject	232
4.8.6.2	Methods	232
4.8.6.3	Results	233
4.8.6.3.1	Main transition	233
4.8.6.3.2	High temperature transition	233
4.8.6.3.3	Complete denaturation mechanism	233
4.8.7	Ligand binding	238
4.8.7.1	Subject	238
4.8.7.2	Binding of dyes	238
4.8.7.2.1	Methods	238
4.8.7.2.2	Results	238
4.8.7.3	Binding of oligonucleotides	238
4.8.7.3.1	Methods	238
4.8.7.3.2	Results	238

4.8.7.4	DNA dependent RNA polymerase II from wheat germ	239
4.8.7.4.1	Methods	239
4.8.7.4.2	Results	239
4.8.8	References for 4.8	241
4.9	Thermodynamic data for protein-nucleic acid interactions (S.C. KOWALCZYKOWSKI)	244
4.9.1	Introduction	244
4.9.1.1	General remarks	244
4.9.1.2	Arrangement of data	244
4.9.1.3	List of symbols and abbreviations	245
4.9.2	Thermodynamic formalism and experimental methods	245
4.9.2.1	Definition of sequence-specific nucleic acid binding parameters	245
4.9.2.2	Definition of non-specific nucleic acid binding parameters	246
4.9.2.3	Effect of solution variables on protein-nucleic acid interactions	247
4.9.2.4	Experimental methods	248
4.9.2.4.1	Physical separation methods	248
4.9.2.4.2	Spectroscopic methods	249
4.9.3	Protein-nucleic acid binding parameters	250
4.9.4	References for 4.9	262
4.10	Model systems for the characterization of protein-nucleic acid interactions (D. PORSCHKE)	264
4.10.1	Introduction	264
4.10.1.1	Methods	264
4.10.1.2	List of symbols and abbreviations	265
4.10.2	Data	266
4.10.2.1	Interactions in non-aqueous solvents	266
4.10.2.2	Interactions of monomer residues in aqueous solution	268
4.10.2.3	Interactions of peptides containing basic amino acids with nucleic acids (analysis of electrostatic interactions)	271
4.10.2.4	Interactions of amino acids and peptides of mixed sequence with polynucleotides	274
4.10.2.5	Enthalpy- and entropy-changes from calorimetric and van't Hoff analysis	278
4.10.2.6	Kinetic (and equilibrium) parameters from relaxation measurements	280
4.10.2.7	Effects of amino acid and peptide ligands on the cooperative helix-coil transition of polynucleotides (with ligand binding data)	281
4.10.2.7.1	Melting temperatures without model interpretation	281
4.10.2.7.2	Peptides with more than a single melting phase	283
4.10.2.7.3	Empirical representation of melting temperatures	284
4.10.2.7.4	Interpretation of melting data by a site binding model	286
4.10.2.8	Model complexes formed with polypeptides	287
4.10.2.8.1	Binding of mononucleotides to polypeptides	287
4.10.2.8.2	Precipitation by poly (Lys) and poly (Arg)	288
4.10.2.8.3	Complexes formed from polypeptides with mixed sequences	289
4.10.2.9	Miscellaneous	291
4.10.3	References for 4.10	293
4.11	Dipole moments and related data (K.L. WIERZCHOWSKI)	295
4.11.1	Introduction	295
4.11.1.1	General remarks	295
4.11.1.2	Experimental methods	295
4.11.1.3	Solvent effects	297
4.11.2	Data	298
4.11.3	References for 4.11	307
4.12	Tautomerism of purines and pyrimidines, their nucleosides and various analogues (D. SHUGAR, A. PSODA)	308
4.12.1	Introduction	308
4.12.1.1	General remarks	308
4.12.1.2	Examples of tautomerism	308
4.12.1.2.1	Tautomerism of nitrogen heterocyclic systems	308
4.12.1.2.2	Tautomerism of DNA constituents	309
4.12.1.3	Experimental methods	309

4.12.1.3.1 Principal methods	309
4.12.1.3.2 Basicity method	310
4.12.1.4 Presentation of data	310
4.12.1.5 List of experimental methods	311
4.12.2 Predominant tautomeric species of nucleic acid components	311
4.12.2.1 Tautomeric forms of major constituents of DNA and most types of RNA	311
4.12.2.2 Tautomeric forms of atypical constituents of tRNA	311
4.12.2.3 Tautomeric forms in various states of aggregation	311
4.12.2.3.1 Solid state	311
4.12.2.3.2 Solution	311
4.12.2.3.3 Gas-phase	312
4.12.2.3.4 Low-temperature inert gas matrices	312
4.12.2.3.5 Metal coordination complexes	312
4.12.3 Data on tautomerism	313
4.12.3.1 Minor tautomeric species of neutral forms of purines, pyrimidines, some analogues and nucleosides	313
4.12.3.2 Prototropic tautomerism in the imidazole ring of common purines	315
4.12.3.3 Monocationic forms (protonation sites) of purines and pyrimidines	316
4.12.3.4 Protonation sites in the cationic forms of the purine and pyrimidine bases of nucleosides (and the corresponding nucleotides)	317
4.12.3.5 Protonation sites of purines and pyrimidines involved in various types of base pairing in different systems	318
4.12.3.6 Monoanionic species of purines and purine nucleosides	323
4.12.3.7 Monoanions of 2,4-diketopyrimidines	325
4.12.3.8 Monoanions of thiouracils	326
4.12.3.9 Neutral forms of 2(4)-monooxypyrimidines	326
4.12.3.10 Reduced pyrimidines (metabolic intermediates) and their nucleosides	327
4.12.3.11 Barbituric acids and barbitals	330
4.12.3.12 Isocytosines	332
4.12.3.13 Isoguanine and isoguanosines	333
4.12.3.14 Promutagenic analogues of cytosine	335
4.12.3.15 Promutagenic analogues of adenosine	337
4.12.3.16 4-Aminopyrazolo (3,4- <i>d</i>)pyrimidine	338
4.12.3.17 Pyrazolo(4,3- <i>d</i>)pyrimidines and their nucleosides	340
4.12.4 References for 4.12	344
5 Theoretical investigations	
5.1 Electrostatic potentials, fields and accessibilities (B. PULLMAN, R. LAVERY)	349
5.1.1 Introduction	349
5.1.1.1 General remarks	349
5.1.1.2 List of symbols and abbreviations	349
5.1.2 Methods of calculation and representation	350
5.1.2.1 Calculation of electrostatic properties	350
5.1.2.2 Representation of electrostatic properties	350
5.1.2.3 Atomic accessibilities	351
5.1.3 Results	351
5.1.3.1 The potential of the nucleic acid subunits	351
5.1.3.2 The evolution of electrostatic potential from the nucleic acid subunits to long duplex segments	352
5.1.3.3 The influence of base sequence and nucleic acid conformation on electrostatic potentials	352
5.1.3.4 Atomic accessibilities in various DNA conformers	353
5.1.3.5 Special features of oligomeric DNA	353
5.1.3.6 A-RNA and tRNA with data concerning the effects of complex tertiary folding .	354
5.1.3.7 Electrostatic field: differences with potential and its application to hydration studies	354
5.1.3.8 Counterion and dielectric effects on electrostatic properties	355
5.1.3.9 ASIF: an index combining electrostatic properties and accessibility	355
5.1.4 References for 5.1	413

5.2	Classical energy calculations of DNA, RNA and their constituents (W.K. OLSON, A.R. SRINIVASAN)	415
5.2.1	Introduction	415
5.2.1.1	General remarks	415
5.2.1.2	General format	415
5.2.1.3	List of symbols	415
5.2.2	Internal variables	416
5.2.2.1	Structural variations	416
5.2.2.2	Torsional potentials	416
5.2.3	Nonbonded interactions	416
5.2.3.1	Components	416
5.2.3.2	Van der Waals contributions	417
5.2.3.3	Solvent effects	418
5.2.3.4	Electrostatic interactions	418
5.2.3.5	Hydrogen bonding	418
5.2.4	Comparisons	419
5.2.5	Discussion	421
5.2.6	Data	422
5.2.6.1	Torsional barrier heights	422
5.2.6.2	Van der Waals parameters of selected atom pairs in the nucleic acid chain	422
5.2.6.3	Partial atomic charges and interaction potentials	433
5.2.7	References for 5.2	434
5.3	The flexibility and dynamics of DNA (P.A. KOLLMAN)	436
5.3.1	Introduction	436
5.3.1.1	General remarks	436
5.3.1.2	List of symbols	436
5.3.2	Molecular mechanics and dynamics theory	437
5.3.2.1	Molecular mechanics	437
5.3.2.2	Molecular dynamics	437
5.3.3	Applications of molecular mechanics and dynamics	443
5.3.3.1	Molecular mechanics	443
5.3.3.1.1	Conformational parameters of initial and refined structures	443
5.3.3.1.2	Sugar pucker and glycosidic angle as a function of helix twist	447
5.3.3.1.3	Torsion angle changes accompanying the constraint of a single torsion angle	448
5.3.3.2	Molecular dynamics	449
5.3.3.2.1	Torsion angles, sugar pucker, H-bond fluctuations of DNA fragments	449
5.3.3.2.2	Helical properties, H-bonding, sugar pucker and non-standard conformations of DNA decamers	452
5.3.4	References for 5.3	453
5.4	New theoretical models for DNA structure (M. BANSAL, V. SASISEKHARAN)	455
5.4.1	Introduction	455
5.4.1.1	General remarks	455
5.4.1.2	List of symbols	455
5.4.2	Methods	456
