Preface	v
<b>1 Formulas from Algebra, Trigonometry and Analytic Geometry</b>	1
<b>H. Lennart Pearson</b>	
1.1 The Real Number System	1
1.2 The Complex Number System	2
1.3 Inequalities	5
1.4 Powers and Logarithms	5
1.5 Polynomial Equations	9
1.6 Rational Functions and Partial Fractions	14
1.7 Determinants and Solution of Systems of Linear Equations	16
1.8 Progressions	20
1.9 Binomial Theorem, Permutations and Combinations	21
1.10 The Trigonometric Functions	22
1.11 Analytic Geometry of Two-Space	39
1.12 Analytic Geometry of Three-Space	57
1.13 References and Bibliography	80
<b>2 Elements of Analysis</b>	82
<b>H. Lennart Pearson</b>	
2.1 Sequences	82
2.2 Infinite Series	84
2.3 Functions, Limits, Continuity	89
2.4 The Derivative	92
2.5 The Definite Integral	98
2.6 Methods of Integration	104
2.7 Improper Integrals	110
2.8 Partial Differentiation	114
2.9 Multiple Integrals	119
2.10 Infinite Products	125
2.11 References and Bibliography	125

<b>3 Vector Analysis</b>	<b>127</b>
<b>Gordon C. Oates</b>	
3.0 Introduction	127
3.1 Coordinate Systems	127
3.2 Vector Algebra	133
3.3 Vector Calculus	139
3.4 Successive Operations	156
3.5 Vector Fields	162
3.6 Summary	165
3.7 Bibliography	178
<b>4 Tensors</b>	<b>179</b>
<b>Bernard Budiansky</b>	
4.0 Introduction	179
4.1 Vectors in Euclidean 3-D	179
4.2 Tensors in Euclidean 3-D	184
4.3 General Curvilinear Coordinates in Euclidean 3-D	191
4.4 Tensor Calculus	194
4.5 Theory of Surfaces	201
4.6 Classical Interlude	213
4.7 An Application: Continuum Mechanics	218
4.8 Tensors in $n$ -Space	223
4.9 Bibliography	225
<b>5 Functions of a Complex Variable</b>	<b>226</b>
<b>A. Richard Seebass</b>	
5.0 Introduction	226
5.1 Preliminaries	226
5.2 Analytic Functions	229
5.3 Singularities and Expansions	242
5.4 Residues and Contour Integrals	248
5.5 Harmonic Functions and Conformal Mapping	257
5.6 Acknowledgments	268
5.7 References and Bibliography	269
<b>6 Ordinary Differential and Difference Equations</b>	<b>271</b>
<b>Edward R. Benton</b>	
6.0 Introduction	271
6.1 Basic Concepts	271
6.2 First Order Linear Differential Equations	279

6.3	Second Order Linear Differential Equations with Constant Coefficients	283
6.4	Second Order Linear Differential Equations with Variable Coefficients	290
6.5	Linear Equations of High Order and Systems of Equations	307
6.6	Eigenvalue Problems	315
6.7	Nonlinear Ordinary Differential Equations	323
6.8	Approximate Methods	327
6.9	Ordinary Difference Equations	336
6.10	References	342
<b>7</b>	<b>Special Functions</b>	344
	<b>Victor Barcilon</b>	
7.0	Introduction	344
7.1	Exponential Integral and Related Functions	346
7.2	Gamma Function and Related Functions	348
7.3	Error Function and Related Functions	351
7.4	Bessel Functions	353
7.5	Modified Bessel Functions	359
7.6	Orthogonal Polynomials	361
7.7	Hypergeometric Functions and Legendre Functions	369
7.8	Elliptic Integrals and Functions	372
7.9	Other Special Functions	375
7.10	References and Bibliography	377
<b>8</b>	<b>First Order Partial Differential Equations</b>	378
	<b>Jirair Kevorkian</b>	
8.0	Introduction	378
8.1	Examples of First Order Partial Differential Equations	379
8.2	Geometrical Concepts, Qualitative Results	386
8.3	Quasilinear Equations	400
8.4	Nonlinear Equations	422
8.5	References	447
<b>9</b>	<b>Partial Differential Equations of Second and Higher Order</b>	448
	<b>Carl E. Pearson</b>	
9.0	Survey of Contents	448
9.1	Derivation Examples	448
9.2	The Second-Order Linear Equation in Two Independent Variables	453
9.3	More General Equations	459
9.4	Series Solutions	462

**x** *Contents*

9.5	Transform Methods	465
9.6	The Perturbation Idea	467
9.7	Change of Variable	469
9.8	Green's Function	473
9.9	Potential Theory	482
9.10	Eigenvalue Problems	484
9.11	Characteristics	486
9.12	Variational Methods	493
9.13	References	496
<b>10</b>	<b>Integration, Linear Operators, Spectral Analysis</b>	497
	<b>Frank H. Brownell</b>	
10.0	Introduction	497
10.1	Some Topological Elements	497
10.2	Integration by Measures	506
10.3	Measure Construction	518
10.4	Hilbert Space Operators	529
10.5	Spectral Integrals and Spectral Theorems	554
10.6	Spectral Analysis and Applications	569
10.7	References	583
<b>11</b>	<b>Transform Methods</b>	585
	<b>Gordon E. Latta</b>	
11.0	Introduction	585
11.1	Fourier's Integral Formula	585
11.2	Laplace Transforms	592
11.3	Linearity, Superposition, Representation Formulas	599
11.4	The Wiener-Hopf Technique	606
11.5	Abel's Integral Equation, Fractional Integrals, Weyl Transforms	615
11.6	Poisson's Formula, Summation of Series	620
11.7	Hilbert Transforms, Riemann-Hilbert Problem	623
11.8	Finite Transforms	636
11.9	Asymptotic Results	638
11.10	Operational Formulas	639
11.11	References	644
<b>12</b>	<b>Asymptotic Methods</b>	645
	<b>Frank W. J. Olver</b>	
12.1	Definitions	645
12.2	Integrals of a Real Variable	650
12.3	Contour Integrals	657

12.4	Further Methods for Integrals	662
12.5	Sums and Sequences	672
12.6	The Liouville-Green (or WKB) Approximation	681
12.7	Differential Equations with Irregular Singularities	689
12.8	Differential Equations with a Parameter	694
12.9	Estimation of Remainder Terms	705
12.10	References and Bibliography	709
<b>13</b>	<b>Oscillations</b>	<b>711</b>
<b>Richard E. Kronauer</b>		
13.0	Introduction	711
13.3	Lagrange Equations	711
13.2	Conservative Linear Systems, Direct Coupled	714
13.3	Systems with Gyroscopic Coupling	723
13.4	Mathieu-Hill Systems	726
13.5	Oscillations with Weak Nonlinearities	732
13.6	Oscillators Coupled by Weak Nonlinearity	746
13.7	References and Bibliography	759
<b>14</b>	<b>Perturbation Methods</b>	<b>761</b>
<b>G. F. Carrier</b>		
14.1	Introduction	761
14.2	Perturbation Methods for Ordinary Differential Equations	762
14.3	Partial Differential Equations	770
14.4	Multiscaling Methods	778
14.5	Boundary Layers	794
14.6	Remarks	827
14.7	References	828
<b>15</b>	<b>Wave Propagation</b>	<b>829</b>
<b>Wilbert Lick</b>		
15.0	Introduction	829
15.1	General Definitions and Classification of Waves	830
15.2	Physical Systems and Their Classification	835
15.3	Simple Waves: Nondispersive, Nondiffusive	843
15.4	Dispersive Waves	862
15.5	Diffusive Waves	876
15.6	References and Bibliography	889

<b>16 Matrices and Linear Algebra</b>	892
<b>Tse-Sun Chow</b>	
16.1 Preliminary Considerations	892
16.2 Determinants	896
16.3 Vector Spaces and Linear Transformation	899
16.4 Matrices	903
16.5 Linear System of Equations	906
16.6 Eigenvalues and the Jordan Normal Form	911
16.7 Estimates and Determination of Eigenvalues	920
16.8 Norms	922
16.9 Hermitian Forms and Matrices	925
16.10 Matrices with Real Elements	927
16.11 Generalized Inverse	930
16.12 Commuting Matrices	931
16.13 Compound Matrices	934
16.14 Handling Large Sparse Matrices	935
16.15 References	939
<b>17 Functional Approximation</b>	942
<b>Robin Esch</b>	
17.0 Introduction	942
17.1 Norms and Related Measures of Error	945
17.2 Relationship between Approximation on a Continuum and on a Discrete Point Set	949
17.3 Existence of Best Approximations	951
17.4 $L_2$ or Least-Mean-Square Approximation	952
17.5 Theory of Chebyshev Approximation	964
17.6 Chebyshev Approximation Methods Based on Characterization Properties	972
17.7 Use of Linear Programming in Chebyshev Approximation	981
17.8 $L_1$ Approximation	988
17.9 Piecewise Approximation without Continuity at the Joints	991
17.10 Approximation by Splines and Related Smooth Piecewise Functions	995
17.11 References	999
<b>18 Numerical Analysis</b>	1002
<b>A. C. R. Newbery</b>	
18.0 Introduction	1002
18.1 General Information on Error Analysis	1002
18.2 Linear Equation Systems	1006
18.3 Eigenvalue and Lambda-Matrix Problems	1013

18.4	Approximation and Interpolation	1017
18.5	Quadrature and Integral Equations	1028
18.6	Ordinary Differential Equations	1035
18.7	Nonlinear Functions of One Variable	1041
18.8	Nonlinear Equation Systems and Optimization	1045
18.9	Miscellaneous Topics	1051
18.10	Reference and Bibliography	1055
<b>19</b>	<b>Numerical Solution of Partial Differential Equations</b>	1058
	<b>Burton Wendroff</b>	
19.1	Finite Difference Methods for Equations of Evolution	1058
19.2	Finite Difference Methods for Equations of Equilibrium	1077
19.3	Finite Expansion Methods for Equations of Equilibrium	1085
19.4	Finite Expansion Methods for Equations of Evolution	1096
19.5	References	1101
<b>20</b>	<b>Optimization Techniques</b>	1104
	<b>Juris Vagners</b>	
20.1	Introduction	1104
20.2	Parameter Optimization	1111
20.3	Dynamic Optimization, Necessary Conditions	1122
20.4	Extremal Fields, Sufficiency Conditions	1150
20.5	Computational Techniques	1160
20.6	Elements of Game Theory	1172
20.7	References	1177
<b>21</b>	<b>Probability and Statistics</b>	1181
	<b>L. Fisher</b>	
21.0	Introduction	1181
21.1	Probability Spaces	1181
21.2	Random Vectors and Random Variables	1183
21.3	Descriptive Statistics	1196
21.4	Statistical Inference	1196
21.5	The General Linear Model	1206
21.6	Some Other Techniques of Multivariate Analysis	1211
21.7	Parametric, Nonparametric, and Distribution-Free Statistical Tests	1216
21.8	Bayesian Statistics and Decision Theory	1225
21.9	Concluding Remarks	1232
21.10	References	1233
