

Radiometry and Photometry

JAY F. SNELL

Tektronix, Incorporated, Beaverton, Oreg.

(Numbers refer to paragraphs)

Introduction	1
Basic Concepts	2
Energy and Flux	3
Spectral and Nonspectral Quantities	4
Radiometric and Photometric Quantities	5
Spatial Densities	6
Radiance (Luminance)	7
Radiant (Luminous) Intensity	8
Irradiance (Illuminance)	9
Radiant (Luminous) Density	10
Summary of Basic Concepts	11
Basic Terms, Symbols, and Units	12
Terms and Symbols	13
Units	14
Blackbody Radiation	15
Total Blackbody Radiation: The Stefan-Boltzmann Law	16
Spectral Distribution of Blackbody Radiation: The Planck Radiation Law	17
Approximate Spectral Distribution of Blackbody Radiation: The Wien and the Rayleigh-Jeans Radiation-Law Approximations	18
Wien Displacement Law	19
Normalized Spectral-Distribution Function and Normalized Cumula- tive Spectral-Distribution Function for Blackbody Radiation	20
Blackbody-Radiation Data	21
Luminous-Blackbody Radiation	
Blackbody Luminance	22
Luminous Efficacy of Blackbody Radiation	23
Temperature as a Parameter of Radiation	24
Chromaticity of Blackbody Radiation	25
Emissivity	26
