

SECTION 1

BASIC MATHEMATICS

SHELDON S. L. CHANG, EDITOR

CHI-TSONG CHEN, EDITOR

Department of Electrical Engineering
State University of New York at Stony Brook

1.1 VECTOR ANALYSIS	2	1.5.3 Method of Separation of Variables	34
1.1.1 Vector Algebra	2	1.6 SPECIAL FUNCTIONS	36
1.2 COMPLEX NUMBER, ALGEBRA, FUNCTIONS OF COMPLEX VARIABLE, AND CAUCHY'S THEOREM	4	1.6.1 Gamma and Beta Functions	36
1.2.1 Complex Number, Algebra	4	1.6.2 Stirling's Formula	37
1.2.2 Functions of a Complex Variable	5	1.6.3 Bessel Functions in Power Series Form	37
1.2.3 Cauchy's Integral Theorem	6	1.6.4 Integral Representation of Bessel Functions	39
1.2.4 Infinite Series	9	1.6.5 Neuman and Hankel Functions	39
1.2.5 Residue Theorem	11	1.6.6 Modified Bessel Functions	40
1.2.6 Cauchy Principal Values and the Hilbert Transform	13	1.6.7 Expansion in Bessel Functions	41
1.3 EXPONENTIAL, TRIGONOMETRIC, AND HYPERBOLIC FUNCTIONS	14	1.6.8 Legendre Polynomials	42
1.4 FOURIER SERIES, FOURIER TRANSFORM, LAPLACE TRANSFORM, z-TRANSFORM, AND SAMPLING THEOREM	16	1.6.9 Error Function	45
1.4.1 Fourier Series	16	1.7 MATRIX AND LINEAR ALGEBRA	46
1.4.2 Fourier Transform	18	1.7.1 Matrices	46
1.4.3 Laplace Transform	21	1.7.2 Determinants	47
1.4.4 z-Transform	25	1.7.3 Rank and Linear Dependence	48
1.5 PARTIAL DIFFERENTIAL EQUATIONS	31	1.7.4 Linear Algebraic Equations	49
1.5.1 Intuitive Solutions	31	1.7.5 Eigenvalues and Eigenvectors	50
1.5.2 Laplacian Operator in Orthogonal Curvilinear Coordinates	33	1.7.6 Positive Definite Matrices	51
		1.7.7 Norms and Inner Products	52
		1.8 PERMUTATIONS AND COMBINATIONS	54
		1.8.1 Permutation	54
		1.8.2 Combination	54
		1.9 DYNAMIC PROGRAMMING AND THE MAXIMUM PRINCIPLE	54
		1.9.1 Multistage Decision Process	55
		1.9.2 Dynamic Programming	55
		1.9.3 Dynamic Programming for Continuous Systems	56
		1.9.4 Maximum Principle	58

SECTION 2

BASIC PHYSICS AND THE PROPERTIES OF MATERIALS

GARY THOMAS, EDITOR

Vice President for Academic Affairs
New Jersey Institute of Technology, Newark

HANG-SHENG TUAN, EDITOR

Department of Electrical Engineering
State University of New York at Stony Brook

2.1 ELECTROMAGNETIC THEORY	65	2.3 QUANTUM MECHANICS	101
2.1.1 Coulomb's Law	65	2.3.1 Schrödinger Wave Equation	101
2.1.2 Static Electric Field	66	2.3.2 Conservation of Probability and the Correspondence Principle	102
2.1.3 Gauss's Law of Electric Flux	67	2.3.3 Uncertainty Relationships	104
2.1.4 Properties of Static Electric Field	67	2.3.4 Quantum Mechanical Description of the Free Electron	105
2.1.5 Electrostatic Potential	68	2.3.5 Quantum Mechanical Description of the Harmonic Oscillator	108
2.1.6 Electrostatic Energy	70	2.3.6 Quantum Mechanical Description of a Particle in a Central Force Field	113
2.1.7 Conductors and Dielectrics	71	2.3.7 Perturbation Theory	117
2.1.8 Equivalent Charge Distribution of $\mathbf{P}(\mathbf{r})$ and Electric Flux Density Vector $\mathbf{D}$	72	2.4 PROPERTIES OF CRYSTALLINE SOLIDS	120
2.1.9 Boundary Value Problems in Electrostatics	73	2.4.1 Crystalline Structure	120
2.1.10 Ampère's Law of Force	81	2.4.2 Periodic Functions	122
2.1.11 Properties of $\mathbf{B}$ Field	83	2.4.3 Bragg Scattering	123
2.1.12 Vector Potential $\mathbf{A}$	84	2.4.4 Bloch's Theorem	124
2.1.13 Magnetic Materials and Magnetic Field Intensity H	85	2.4.5 Brillouin Zone	125
2.1.14 Faraday's Law of Induction	88	2.4.6 "Free" Electrons in a Lattice	126
2.1.15 Generalized Ampère's Circuit Law	89	2.4.7 "Nearly Free" Electrons in a Lattice	127
2.1.16 Maxwell's Equations and Constitutive Relationships	89	2.4.8 Electrical Classification of Solids	130
2.1.17 The Wave Equation and Electromagnetic Waves	91	2.4.9 Effective Mass	131
2.1.18 Integration of Maxwell's Equations; Vector and Scalar Potentials	92	2.5 SEMICONDUCTOR PROPERTIES AND DEVICES	134
2.1.19 Quasistatic Approximation of Electromagnetic Fields	93	2.5.1 Variation of Carrier Concentration in Intrinsic Semiconductors	134
2.2 ELECTRON BALLISTICS	95	2.5.2 Extrinsic Semiconductors	135
2.2.1 Motion of Charged Particles in Electrostatic Fields	95	2.5.3 Motion of Carriers in Semiconductors	139
2.2.2 Motion of Charged Particles in Static Magnetic Fields	98	2.5.4 <i>pn</i> -Junction Diodes	141
2.2.3 Motion of Charged Particles in Static Electric and Magnetic Fields	100	2.5.5 Bipolar Transistor	150

2.6	MAGNETIC PROPERTIES OF MATERIALS	153					
2.6.1	Magnetic Dipole	153			2.8.2	Macroscopic Theories of Superconductivity	171
2.6.2	Diamagnetism	154			2.8.3	Josephson Junction	177
2.6.3	Paramagnetism	155			2.9	CONSTANTS OF MATERIALS	182
2.6.4	Ferrimagnetism and Spontaneous Magnetization	159			2.9.1	Basic Units, Physical Constants, and Conversion Factors	182
2.6.5	Magnetic Domains	162			2.9.2	Resistivity	183
2.7	ELECTRON EMISSION	165			2.9.3	Permittivity or Dielectric Constant	183
2.7.1	Thermonic Emission	165			2.9.4	Important Semiconductor Material Parameters	183
2.7.2	Field Emission	166			2.9.5	Properties of Magnetic Materials	183
2.8	SUPERCONDUCTIVITY AND CRYOGENICS	168			2.9.6	Properties of Superconducting Materials	188
2.8.1	Experimental Observation	168					

SECTION 3

CIRCUITS, NETWORK THEOREMS, AND FILTERS

SHELDON S. L. CHANG, EDITOR

CHI-TSONG CHEN, EDITOR

Department of Electrical Engineering
State University of New York at Stony Brook

B. W. DANIELS

Bell Telephone Laboratories
North Andover, Massachusetts

3.1 BASIC CIRCUIT THEORY	192	3.4 APPROXIMATION PROBLEM	220
3.1.1 Circuit Elements	192	3.4.1 Butterworth Approximation	221
3.1.2 Network Graphs	195	3.4.2 Chebyshev Approximation (Equal Ripple Filters)	222
3.1.3 Kirchhoff's Current Law and Incidence Matrix	196	3.4.3 Causer Approximation	225
3.1.4 Kirchhoff's Voltage Law and Loop Matrix	198	3.4.4 Bessel Approximation	226
3.1.5 Some Basic Relationships	200	3.4.5 Phase Correction Network	227
3.1.6 Loop Analysis of Linear Time-Invariant Circuits	201	3.4.6 Examples of Transfer Function Synthesis	228
3.1.7 Node Analysis of Linear Time-Invariant Circuits	204	3.4.7 Gain Sensitivity	229
3.1.8 State Equations for Linear Time-Invariant Networks	205	3.4.8 Determination of Filter Complexity	231
3.1.9 Solution of State Equations	208	3.5 ACTIVE FILTER SYNTHESIS	233
3.1.10 Modified Nodal Equations	211	3.5.1 Decomposition into Second-Order Transfer Functions	233
3.2 NETWORK THEOREMS	213	3.5.2 Some Practical Active Circuits	236
3.2.1 Tellegen's Theorem	213	3.5.3 Coupled Active Filters	241
3.2.2 Substitution Theorem	214	3.5.4 Concluding Remarks	242
3.2.3 Superposition Theorem	214	3.6 ENVELOPE TRANSFER FUNCTION	243
3.2.4 Thévenin's Theorem and Norton's Theorem	215	3.6.1 Mathematical Formulation	243
3.2.5 Reciprocity Theorem	216	3.6.2 Physical Implications of the Envelope Transfer Function	244
3.3 FILTER DESIGN FUNDAMENTALS	217	3.7 MAGNETIC MATERIALS AND CIRCUITS	246
3.3.1 Properties of the Transfer Function	217	3.7.1 Magnetic Materials	246
3.3.2 Bode's Relationships between α and β	218	3.7.2 Linear Approximation of Magnetic Circuits	248
		3.7.3 Nonlinear Calculations	253

SECTION 4

DIGITAL SIGNAL PROCESSING

KENNETH STEIGLITZ, EDITOR

Department of Electrical Engineering and Computer Science
Princeton University, Princeton, New Jersey

4.1 DIGITAL FILTERS	256	4.4 FAST FOURIER TRANSFORM	277
4.1.1 Comparison of Digital and Analog Filters	256	4.4.1 Windowing and Sampling Process	277
4.1.2 Implementation Structures for Finite Impulse Response Digital Filters	256	4.4.2 Discrete Fourier Transform and Its Properties	279
4.1.3 Implementation Structures for All-Pole Digital Filters	259	4.4.3 Fast Fourier Transform Algorithm (Decimation-in-Time)	281
4.1.4 Implementation Structures for Infinite Impulse Response Digital Filters	260	4.4.4 Decimation-in-Frequency Algorithm	284
4.1.5 Transposition Theorem	263	4.4.5 Application to Fast Convolution	286
4.2 DESIGN OF FINITE IMPULSE RESPONSE DIGITAL FILTERS	264	4.5 FINITE-WORD-LENGTH EFFECTS	288
4.2.1 Specification of a Problem in the Frequency Domain	264	4.5.1 Signal Quantization	289
4.2.2 Remez Algorithm	266	4.5.2 Coefficient Quantization in FIR Filters	289
4.2.3 Linear Programming	268	4.5.3 Coefficient Quantization in IIR Filters	291
4.2.4 Estimate of Required Order	270	4.5.4 Arithmetic Round-off Accumulation in Fixed-Point Digital Filters	292
4.3 DESIGN OF INFINITE IMPULSE RESPONSE DIGITAL FILTERS	271	4.5.5 Limit Cycle Oscillations with Zero Input	296
4.3.1 Contrast with FIR Filter Design	271	4.5.6 Round-off Noise in the Fixed-Point FFT (Decimation in Time)	296
4.3.2 Bilinear Transform Technique	271		
4.3.3 Nonlinear Programming Methods	274		

SECTION 5

TRANSMISSION LINES, ELECTROMAGNETIC WAVE PROPAGATION, AND MICROWAVE ACOUSTICS

HANG-SHENG TUAN, EDITOR

Department of Electrical Engineering
State University of New York at Stony Brook

HENRY L. BERTONI

Department of Electrical Engineering
Polytechnic Institute of New York, Brooklyn

JAYANT KUMAR P. PAREKH

Department of Electrical Engineering
State University of New York at Stony Brook

5.1 TRANSMISSION LINE THEORY	302	5.2.8 Transverse Magnetic Waves—TM (E) Modes	338
5.1.1 Basic Properties of Transmission Lines	302	5.2.9 Transverse Electric Waves—TE (H) Modes	339
5.1.2 Excitation and Termination of Transmission Lines	306	5.2.10 Rectangular and Cylindrical Waveguides	341
5.1.3 Harmonic Excitation of Transmission Lines	311	5.2.11 Planar Surface Waveguide	346
5.2 ELECTROMAGNETIC WAVE PROPAGATION	321	5.2.12 Optical Fiber	352
5.2.1 Radiation from a Short Dipole and Poynting's Theorem	321	5.3 MICROWAVE ACOUSTICS	357
5.2.2 Plane Waves	324	5.3.1 Continuum Acoustic Field Quantities	358
5.2.3 Dispersion	326	5.3.2 Wave Equation, Boundary Conditions, and the Poynting Vector	366
5.2.4 Waves in Material Media	328	5.3.3 Waves in Isotropic Elastic Media	372
5.2.5 Reflection and Refraction of Plane Waves at Plane Boundaries	330	5.3.4 Waves in Piezoelectric Media	396
5.2.6 Introduction to Guided Electromagnetic Waves	335	5.3.5 Bulk-Acoustic-Wave Transduction and Applications	409
5.2.7 Transverse Electromagnetic Waves—TEM Waves	336	5.3.6 SAW Transduction and Applications	429

SECTION 6

ELECTRONICS

G. THOMAS, EDITOR

Vice President for Academic Affairs
New Jersey Institute of Technology, Newark

NARENDRA MOHAN

Department of Electrical Engineering
University of Minnesota, Minneapolis

ROBERT L. KUSTOM

Argonne National Laboratory
Argonne, Illinois

KENNETH SOHN

Department of Electrical Engineering
New Jersey Institute of Technology, Newark

S. Y. YU

J. A. CALVIELLO

Eaton Corporation
AIL Division
Melville, New York

DENNY D. TANG, T.J.

IBM Thomas J. Watson Research Center

ANDRES FORTINO

College of Engineering Technology
Temple University, Philadelphia

MAURO ZAMBUTO

Department of Electrical Engineering
New Jersey Institute of Technology, Newark

HSU CHANG

IBM Thomas J. Watson Research Center
Yorktown, New York

W. ANACKER

IBM Thomas J. Watson Research Center
Yorktown, New York

6.1 POWER ELECTRONICS I	455	6.4 MICROWAVE SEMICONDUCTOR DEVICES	490
6.1.1 Power Semiconductor Devices	455		
6.1.2 Phase-Controlled Rectifiers and AC-Line-Voltage Commutated Inverters	457	6.5 GaAs VARACTORS AND MIXER DEVICES	493
6.1.3 Forced Commutated Inverter Circuits	459	6.5.1 Material and Properties of Device Structure	493
6.1.4 Six-Step and Pulse-Width-Modulated Inverters	461	6.5.2 Semiconductor Properties	493
6.1.5 Cycloconverters	463	6.5.3 Basic Equations	494
6.1.6 Choppers for DC-DC Conversion	463	6.5.4 Voltage Breakdown	496
6.2 POWER ELECTRONICS II	465	6.5.5 Basic Device Structure and Equivalent Circuit	497
6.2.1 Thyratrons	465	6.5.6 Current Distribution and Device Series Resistance	497
6.2.2 Ignitrons	468	6.5.7 Device Characterization	498
6.2.3 High-Vacuum Electron Tube	470	6.5.8 Contact Metallurgy and Characterization for GaAs Devices	505
6.3 OSCILLOSCOPES	482	6.5.9 Schottky Contacts	511
6.3.1 Cathode-Ray Tube	482	6.5.10 Surface Passivation	511
6.3.2 Real-Time Oscilloscopes	484	6.5.11 Device Description and Design	511
6.3.3 Sampling Concepts	486	6.5.12 Varactor Design for Paramp and Frequency Multiplier Application	514
6.3.4 Applications	488		

6.5.13	Example of Varactor Design	514	6.9.2	Population Inversion	600
6.5.14	Mixers	517	6.9.3	Oscillating Lasers	600
6.6	GaAs METAL-SEMICONDUCTOR FIELD-EFFECT TRANSISTOR (MESFET)	522	6.9.4	Threshold Conditions for Oscillation	601
6.6.1	MESFET Structure and Equivalent Circuit	523	6.9.5	Summary and General Considerations	602
6.6.2	Semiconductor Material	524	6.9.6	Pumping	602
6.6.3	Experimental Evaluation of Device Parameters at DC	527	6.9.7	Threshold Pumping Power	604
6.6.4	Evaluation of FET Circuit Elements at Microwave Frequencies	530	6.9.8	Laser Power Output	605
6.6.5	Device Design	534	6.9.9	Optimum Power Coupling	608
6.6.6	GaAs MESFET Noise Figure	538	6.9.10	Spectral Profiles	609
6.6.7	Optimization of FET Devices	541	6.9.11	The Einstein Coefficients	612
6.7	BIPOLAR TRANSISTORS AND INTEGRATED CIRCUITS	544	6.9.12	Radiating Transitions in Semiconductors	615
6.7.1	Microwave Transistors and Power Transistors	544	6.10	MAGNETIC BUBBLE TECHNOLOGY	624
6.7.2	Bipolar Integrated Circuits	548	6.10.1	Basics	625
6.7.3	Processing Technology	566	6.10.2	Future Device Technologies	630
6.8	MOS TECHNOLOGY	580	6.10.3	Chip Architectures	634
6.8.1	Device Operation	580	6.11	JOSEPHSON COMPUTER TECHNOLOGY	642
6.8.2	IGFET	583	6.11.1	Switching Gates	642
6.8.3	Processing	592	6.11.2	Logic Circuits	648
6.9	LASERS	597	6.11.3	Random-Access Arrays	652
6.9.1	Interaction Between Radiation and Matter	597	6.11.4	LSI Process	654
			6.11.5	System Implications	655
			6.11.6	Outlook	655

SECTION 7

SWITCHING THEORY AND LOGIC DESIGN

SHELDON S. L. CHANG, EDITOR

Department of Electrical Engineering
State University of New York at Stony Brook

7.1	BOOLEAN ALGEBRA	659	7.5	FLIP-FLOPS	683
7.1.1	Definition	659	7.5.1	<i>S-R</i> Flip-Flop	683
7.1.2	Boolean Expression and the Truth Table	659	7.5.2	<i>J-K</i> Flip-Flop; <i>D</i> and <i>T</i> Flip-Flop	684
7.1.3	Basic Laws and Identities	660	7.5.3	Master-Slave Flip-Flops	685
7.2	REALIZATION OF BOOLEAN FUNCTIONS	661	7.5.4	Shift Register	686
7.2.1	Realization by Gates	661	7.6	STATE MINIMIZATION	687
7.2.2	Integrated-Circuit Logic Families	664	7.6.1	Simplification by Combining Equivalent States	687
7.2.3	NMOS and VLSI	667	7.6.2	Next-Class Tables	687
7.3	MINIMIZATION OF BOOLEAN FUNCTIONS	668	7.6.3	Implication Chart	689
7.3.1	Minterm and Maxterm: Standard Form of Boolean Functions	668	7.6.4	Incompletely Specified Sequential Circuits	690
7.3.2	Incompletely Specified Functions	669	7.7	DESIGN OF CLOCK-MODE SEQUENTIAL CIRCUITS	692
7.3.3	Minimization Criterion	669	7.7.1	State-Table Formulation	692
7.3.4	Karnaugh Map	669	7.7.2	State Assignment	693
7.3.5	Quine-McCluskey Algorithm	671	7.7.3	Realization with ROM and PLA	693
7.4	MULTIPLE-OUTPUT LOGIC NETWORKS	674	7.7.4	Realization with <i>S-R</i> Flip-Flops	695
7.4.1	Multiple-Output Minimization Procedure	674	7.7.5	Flowchart of Clock-Mode Sequential Circuit Design	696
7.4.2	Programmable Logic Array	676	7.8	PULSE-MODE SEQUENTIAL CIRCUITS	697
7.4.3	Read-Only Memory	678	7.9	LEVEL-MODE SEQUENTIAL CIRCUITS	697
7.4.4	Full Adder and Parallel Adder	681
