

# MAIN ENTRIES

04-A	Physics and Technology of Ion and Electron Sources ..... 1	02-A	Polarimeters and Polarization Spectrometers .....341
01-E	Physics and Technology, History of ..... 35	17-C	Polarography, Voltammetry, and Related Techniques .....371
01-C	Physics Applications of Computers—Experimental ..... 55	12-D	Polarons .....383
20-E	Physics in Archaeology ..... 69	16-D	Polymer Dynamics .....415
01-E	Physics Literature and Publications ..... 87	17-D	Polymerization and Polymer Reactions .....445
01-F	Physics Research Facilities ..... 97	10-B	Polymers: Crystal Structure and Morphology .....477
01-F	Physics, Technology, and Society .....107	12-B	Polymers, Electrical and Electronic Properties .....497
14-A	Piezoelectric Devices .....129	10-D	Polymers, Mechanical Properties of .....531
14-A	Piezoelectric Resonators and Applications .....147	17-B	Polymers, Molecular Properties of .....549
09-C	Plasma Etching .....171	14-B	Polymers, Optical Properties of .....569
09-E	Plasma Physics .....199	12-C	Positron-Annihilation Spectroscopy .....607
09-D	Plasma Waves and Instabilities .....237		Contents of Previous Volumes .....633
20-E	Plate Tectonics .....273		
13-B	Plates and Films, Magnetic ....297		
10-D	Point and Extended Defects in Crystals .....317		

The subject matter in the *Encyclopedia of Applied Physics* is presented in approximately 500 individual articles, arranged alphabetically. The topics can be classified into 20 sections, similar to the AIP Physics and Astronomy Classification Scheme (PACS):

01	General Aspects: Mathematical, Computational, and Information Techniques	11	Condensed Matter B: Thermal, Acoustic, and Quantum Properties
02	Measurement Science, General Devices and/or Methods	12	Condensed Matter C: Electronic Properties
03	Nuclear and Elementary Particle Physics	13	Condensed Matter D: Magnetic Properties
04	Atomic and Molecular Physics	14	Condensed Matter E: Dielectrical and Optical Properties
05	Electricity and Magnetism	15	Condensed Matter F: Surfaces and Interfaces
06	Optics (classical and quantum)	16	Materials Science
07	Acoustics	17	Physical Chemistry
08	Thermodynamics and Properties of Gases	18	Energy Research and Environmental Physics
09	Fluids and Plasma Physics	19	Biophysics and Medical Physics
10	Condensed Matter A: Structure and Mechanical Properties	20	Geophysics, Meteorology, Space Physics, and Aeronautics

Each article has been assigned a code number consisting of two digits which denotes the section, and a letter which gives the type of article. There are six types: A = Devices, Equipment; B = Materials; C = Methods, Processes; D = Phenomena, Effects; E = Scientific or Technological Fields; F = Institutions, Companies, Societies and other organizations.
