## CHAPTER I

### PROPERTIES OF THE ATMOSPHERE REVEALED BY SATELLITE ORBITS

D. G. KING-HELE

|   |    |
|---|----|
| 1. Introduction . . . . .                     | 3  |
| 2. Method of analysis . . . . .               | 3  |
| 3. Values of average air density . . . . .    | 16 |
| 4. Variations in air density . . . . .        | 24 |
| 5. Scale height and air temperature . . . . . | 36 |
| 6. Winds in the upper atmosphere . . . . .    | 40 |
| 7. Conclusions . . . . .                      | 44 |
| References . . . . .                          | 45 |

## CHAPTER II

### THE PHYSICAL PROPERTIES OF THE EARTH'S IONOSPHERE

FRANCIS S. JOHNSON

|   |    |
|---|----|
| 1. Introduction . . . . .                               | 53 |
| 2. Atmospheric structure . . . . .                      | 54 |
| 3. Photoelectron production and recombination . . . . . | 62 |
| 4. The electron distribution . . . . .                  | 66 |
| 5. The D region . . . . .                               | 69 |
| 6. The E region . . . . .                               | 73 |
| 7. The F region . . . . .                               | 76 |
| 8. Ion distribution above the F2 maximum . . . . .      | 80 |
| 9. Heat sources in the ionosphere . . . . .             | 84 |
| 10. Electron temperature . . . . .                      | 86 |
| References . . . . .                                    | 87 |

## CHAPTER III

### RADIO DOPPLER METHOD OF USING SATELLITES FOR GEODESY, NAVIGATION AND GEOPHYSICS

A. M. STONE AND G. C. WEIFFENBACH

|   |     |
|---|-----|
| 1. Introduction . . . . .   | 95  |
| 2. Formal connection between satellite dynamics and Doppler shift . . . . . | 99  |
| 3. Methodology . . . . .  | 104 |
| 4. System noise and accuracy . . . . .                                      | 106 |
| 5. Terrestrial navigation . . . . .   | 109 |
| 6. Geodesy . . . . .  | 117 |
| 7. Navigation system and instrumentation . . . . .                          | 120 |

|  |     |
|--|-----|
| 8. Instrumentation for geodetic measurements . . . . . | 127 |
| 9. Results to date . . . . .                           | 129 |
| 10. New applications in geophysics . . . . .           | 137 |
| 11. Summary and conclusions . . . . .                  | 142 |
| References . . . . .                                   | 143 |

## CHAPTER IV

## THE OPTIMIZATION OF ROCKET TRAJECTORIES - A SURVEY

GEORGE LEITMANN

|  |     |
|--|-----|
| 1. Introduction . . . . .                                | 147 |
| 2. Optimization of multistage rockets . . . . .          | 155 |
| 3. Maximum range . . . . .                               | 161 |
| 4. Maximum altitude . . . . .                            | 171 |
| 5. Maximum satellite injection speed . . . . .           | 174 |
| 6. Minimum speed increment . . . . .                     | 182 |
| 7. Energy- and power-limited rocket propulsion . . . . . | 187 |
| 8. Conclusion . . . . .                                  | 196 |
| References . . . . .                                     | 206 |
| Bibliography . . . . .                                   | 207 |

## CHAPTER V

## SURFACE PROPERTIES OF THE MOON

ERNST J. ÖPIK

|  |     |
|--|-----|
| 1. Introduction . . . . .                          | 219 |
| 2. Interpretation of surface markings . . . . .    | 220 |
| 3. Lunar photometry . . . . .                      | 223 |
| 4. Figure of the moon . . . . .                    | 228 |
| 5. The atmosphere of the moon . . . . .            | 237 |
| 6. The lunar surface . . . . .                     | 239 |
| 7. Some recent soviet lunar observations . . . . . | 247 |
| 8. Origin and structure of the moon . . . . .      | 253 |
| References . . . . .                               | 258 |

## CHAPTER VI

## ATMOSPHERE AND SURFACE PROPERTIES OF MARS AND VENUS

ERNST J. ÖPIK

|                           |     |
|---------------------------|-----|
| 1. Introduction . . . . . | 267 |
|---------------------------|-----|

## I. MARS

|   |     |
|---|-----|
| 2. The atmosphere of Mars . . . . .   | 268 |
| 3. The Martian surface . . . . .  | 278 |
| 4. Martian surface temperatures . . . . .   | 281 |
| 5. Transparency of the Martian atmosphere and reflectivity . . . . .                                | 283 |
| 6. Quantitative analysis of Martian extinction and reflection in different<br>wavelengths . . . . . | 284 |
| 7. The blue-absorbing haze . . . . .  | 292 |

CONTENTS

XI

|   |     |
|---|-----|
| 8. The motion of Phobos . . . . .                                       | 296 |
| 9. Oblateness, atmospheric opacity, and limb contrast of Mars . . . . . | 298 |

II. VENUS

|   |     |
|---|-----|
| 10. Composition of atmosphere and structure of surface . . . . .          | 307 |
| 11. Color and structure of surface . . . . .                              | 310 |
| 12. Photometry of the disk . . . . .                                      | 313 |
| 13. Temperature . . . . .   | 323 |
| 14. Rotation, mass of the atmosphere, bands, and magnetic field . . . . . | 329 |
| 15. Vertical cross section of the atmosphere of Venus . . . . .           | 331 |
| 16. Hydrocarbons . . . . .  | 337 |
| References . . . . .  | 339 |

CHAPTER VII

BIODYNAMICS OF SPACE FLIGHT

HENNING E. VON GIERKE AND EDWIN P. HIATT

|                                     |     |
|-------------------------------------|-----|
| 1. Introduction . . . . .           | 345 |
| 2. Prolonged acceleration . . . . . | 361 |
| 3. Transient acceleration . . . . . | 373 |
| 4. Vibrations . . . . .             | 381 |
| 5. Noise. . . . .                   | 387 |
| References . . . . .                | 395 |

|                         |     |
|-------------------------|-----|
| NAME INDEX . . . . .    | 402 |
| SUBJECT INDEX . . . . . | 408 |
