

CONTENTS

	PAGE
I. The Homogeneous Medium	3
1. Fundamental Equations	3
2. Degree of Excitation and Ionization	7
3. Relative Intensities of Lines	9
4. On the Transparency of the Medium to Line Radiation	11
5. Comparison with Observation	14
II. Stars of the Early Classes with Bright Lines	20
1. The Lower Boundary of the Atmosphere	21
2. Excitation Changes Along the Radius	26
3. Contours of Spectral Lines	29
III. Gaseous Nebulae	41
1. The Field of L_c Radiation	42
2. The Field of L_α Radiation	44
3. Temperatures of Nebulae and Nuclei	50
IV. Envelopes of New Stars	62
1. The Atom with Three States	63
2. The Real Atom	69
3. Collisions and General Absorption in the Envelope	72
4. Certain Applications	75

V. Stars of Late Class with Bright Lines	82
1. Origin of "Combination Spectra"	84
2. Optical Depth of the Envelope Beyond the Limits of Subordinate Series	91
3. General Considerations	94
Summary	99
References	103
Index	105
