

Table of Contents

1.	ASTRONOMICAL REFERENCE SYSTEMS	1
	<i>G. M. Clemence</i>	
	1. Introduction	1
	2. Equatorial Co-ordinates	2
	3. Precession and Nutation	3
	3.1. Definition	3
	3.2. Dynamical Theory of Precession and Nutation	4
	3.3. Determination of the Speed of the Precession	5
	4. Aberration	6
	5. Reduction from Apparent to Mean Place	7
	6. The Galactic System of Co-ordinates	8
	7. Galactic Rotation	9
	8. Polar Motion	9
	References	9
 2.	 THE SYSTEM OF FUNDAMENTAL PROPER MOTIONS	 11
	<i>F. P. Scott</i>	
	1. Introduction	11
	2. The Basis of the Celestial Co-ordinate System	12
	3. Catalogues of Observed Positions of the Stars	13
	4. Compiled Fundamental Star Catalogues	16
	5. Sources of Fundamental Proper Motions	23
	6. Projects on the Improvement of Fundamental Proper Motions	26
	References	28
 3.	 THE REFERENCE SYSTEM OF BRIGHT, INTERMEDIATE, AND FAINT STARS AND OF GALAXIES	 30
	<i>S. Vasilevskis</i>	
	1. Introduction	30

2. Bright Stars	31
3. Intermediate Stars	33
4. Faint Stars	35
5. Galaxies	36
References	38
4. PHOTOGRAPHIC PROPER MOTIONS	40
<i>W. Dieckvoss</i>	
1. Introduction	40
2. Reduction of Relative Proper Motions to Absolute	40
3. Photographic Errors	41
4. Catalogues	42
References	45
5. PROPER-MOTION SURVEYS	46
<i>Willem J. Luyten</i>	
1. Introduction and Technique	46
2. The Principal Surveys	49
2.1. Surveys by Wolf and Innes	49
2.2. Surveys by Ross	50
2.3. Surveys by Luyten	50
2.4. Miscellaneous Surveys	51
2.5. Future Surveys	52
3. Advantages and Disadvantages of Blink Surveys	53
References	54
6. TRIGONOMETRIC STELLAR PARALLAXES	55
<i>K. Aa. Strand</i>	
1. Introduction	55
2. Internal Accuracies	56
3. External Probable Errors	58
4. Systematic Corrections	60
5. Present and Future Parallax Programs	61
6. Bibliography	62
References	62

7.	RADIAL VELOCITIES	64
	<i>R. M. Petrie</i>	
1.	Catalogues of Radial Velocities	64
2.	Systematic Differences between Observatories	65
3.	Absolute Accuracy of the <i>General Catalogue</i> System	69
3.1.	A Standard Velocity System	69
3.2.	Solar-Type Stars	69
3.3.	A-Type Stars	71
3.4.	B-Type Stars	72
4.	Frequency of Spectroscopic Binaries	73
	References	76
8.	CLASSIFICATION OF STELLAR SPECTRA	78
	<i>Philip C. Keenan</i>	
1.	Principles of Spectral Classification	78
2.	Physical Theory of Spectral Classification	80
3.	Systems of Classification	83
3.1.	Introduction	83
3.2.	The <i>Henry Draper</i> System (HD Types)	83
3.3.	The Recognition of Differences in Luminosity	85
3.4.	The Mount Wilson Classification (MW Types)	85
3.5.	The MK Classification	88
4.	Spectral Types and Criteria	93
4.1.	Introduction	93
4.2.	Type O	93
4.3.	Type B	95
4.4.	Type A	95
4.5.	Type F	96
4.6.	Types G and K	96
4.7.	Type M	98
4.8.	Type S	102
4.9.	Carbon Stars	102
5.	Spectral Characteristics of Population Groups	105
5.1.	Introduction	105
5.2.	Types B and A	107
5.3.	The Main Sequence, Types G–M	107
5.4.	Giants and Subgiants of Types G and K	108
6.	Classification of Spectrograms of Very Small Scale	112
7.	Conclusions—the Technique of Classification	118
	References	118

9.	QUANTITATIVE CLASSIFICATION METHODS	123
	<i>Bengt Strömberg</i>	
1.	General Considerations	123
2.	Spectral Classification through Wide-Band Photometry	125
3.	Spectral Classification through Photometry in Bands of Intermediate Width	131
4.	Spectral Classification through Narrow-Band Photometry	146
4.1.	Quantitative Photographic Methods Utilizing the Lindblad Criteria	146
4.2.	Quantitative Photographic Methods Based on the Use of the Ultra-violet Criteria of Barbier and Chalonge	151
4.3.	Photographic Methods Utilizing Measures of the Balmer Discontinuity and Balmer Line Strengths	159
4.4.	Photographic Methods Based on Quantitative Determination of Line Ratios for a Considerable Number of Absorption-Line Pairs	161
4.5.	Methods Based on Photoelectric Narrow-Band Photometry	162
4.6.	O. C. Wilson's Method of Determining Absolute Magnitudes from Measures of the Widths of H and K Emission Lines	179
5.	Accuracy and Limiting Magnitude Obtainable in Quantitative Spectral Classification	180
6.	Applications of the Theory of Model Stellar Atmospheres to Results Obtained through Quantitative Spectral Classification	184
	References	186
10.	SPECTRAL SURVEYS OF K AND M DWARFS	192
	<i>A. N. Vyssotsky</i>	
1.	Discovery of Red Dwarf Stars	192
2.	Absolute Magnitudes	193
3.	Distribution by Spectral Class and Apparent Magnitude; Luminosity Function	194
4.	Colors of Red Dwarfs	196
5.	Kinematic Characteristics	197
6.	Population Groups among Red Dwarf Stars	200
7.	Concluding Remarks	201
	References	201

11.	PHOTOMETRIC SYSTEMS	204
	<i>H. L. Johnson</i>	
	1. Introduction	204
	2. General Considerations	204
	3. The U, B, V System	207
	4. The P, V System	216
	5. The Cape Systems	217
	6. The C_1 System	218
	7. The R, I System	218
	8. The Six-Color Photometry	221
	9. Conclusion	221
	References	222
12.	INTERSTELLAR REDDENING	225
	<i>Stewart Sharpless</i>	
	1. The Law of Interstellar Reddening	225
	1.1. The Reddening-Curve	225
	1.2. The Ratio of Total to Selective Absorption	229
	1.3. Reddening Measured in Two- and Three-Color Systems	231
	2. Variations in the Law of Interstellar Reddening	233
	2.1. Photometric Studies	233
	2.2. The Orion Nebula Region	236
	2.3. Conclusions	237
	References	239
13.	APPLICATIONS OF MULTICOLOR PHOTOMETRY	241
	<i>W. Becker</i>	
	1. General Remarks	241
	2. Multicolor Systems in Use at Present	244
	3. Diagrams of Three-Color Photometry and Their Application	246
	3.1. General	246
	3.2. Color Difference, Balmer Discontinuity, and Spectral Type	247
	3.3. Color Difference and Color Index	248
	3.4. Color Differences and Absolute Magnitude	250
	3.5. Color Index and Absolute Magnitude	252
	3.6. The Relation between the Two-Color Indices	253
	References	261

14.	THE STELLAR TEMPERATURE SCALE AND BOLOMETRIC CORRECTIONS . . .	263
	<i>D. L. Harris III</i>	
1.	Introduction	263
2.	Empirical Bolometric Corrections for Late-Type Stars	264
3.	Theoretical Bolometric Corrections	266
4.	Fundamental Effective Temperatures	266
5.	The Effective-Temperature-Spectral-Type Relationship	268
6.	Color Temperatures	270
7.	Summary and Conclusions	271
	References	272
15.	EMPIRICAL DATA ON STELLAR MASSES, LUMINOSITIES, AND RADII . . .	273
	<i>D. L. Harris III, K. Aa. Strand, and C. E. Worley</i>	
1.	Introduction	273
2.	Orbits of Visual Binaries	273
3.	Mass Ratios of Visual Binaries	281
4.	The Empirical Mass-Luminosity Relation	284
5.	The Radii of the Stars	288
	References	291
16.	POLARIZATION OF STARLIGHT	293
	<i>John S. Hall and K. Serkowski</i>	
1.	Introduction	293
2.	Methods of Measuring Polarization	293
2.1.	Parameters Describing Polarization	293
2.2.	Photographic Measurements of Polarization	296
2.3.	Photoelectric Measurements of Polarization	297
3.	Basic Observational Results	299
3.1.	Polarization and the Milky Way	299
3.2.	Wavelength Dependence of Polarization and Extinction	301
4.	Optical Properties of Interstellar Dust	302
4.1.	Distribution Parameter	302
4.2.	Scattering by Cylindrical and Ellipsoidal Grains	304
4.3.	Quantum-mechanical Dust Grains	307

5. Alignment Mechanisms	308
6. Interstellar Polarization and Galactic Magnetic Fields	310
6.1. Magnetic Fields in Spiral Arms	310
6.2. Structure and Density of Magnetic Fields	311
7. Polarization and Extinction	313
7.1. Depolarization	313
7.2. Correlation between Polarization and Extinction	313
References	315
17. SURVEYS AND OBSERVATIONS OF VISUAL DOUBLE STARS	320
<i>W. H. van den Bos</i>	
1. Random Searches	320
2. The Lick Survey	322
3. Southern Surveys	323
4. Special Surveys	324
5. General Catalogues	325
6. Current Files of Measurements	326
7. Conclusion	326
References	326
18. SURVEYS AND OBSERVATIONS OF PHYSICAL AND ECLIPSING VARIABLE STARS	328
<i>B. V. Kukarkin and P. P. Parenago</i>	
1. Introduction	328
1.1. Definition	328
1.2. The Importance of Variable Stars	328
2. Historical Summary	329
3. The Nomenclature of Variable Stars	332
4. Literature on Variable Stars	333
4.1. Catalogues and Lists of Variable Stars	333
4.2. The Number of Known Variable Stars	335
4.3. Bibliography of Variable Stars	336
5. Classification of Variable Stars	337
5.1. Historical	337
5.2. General Classification	338
5.3. Eruptive Variable Stars	339
5.4. Pulsating Variable Stars	346
5.5. Eclipsing Variable Stars	356

6. Statistics on Variable Stars	359
6.1. Probability of Discovery	359
6.2. Observed Distribution According to Type	360
6.3. Special Surveys of Variable Stars	360
6.4. Estimate of the Total Number of Variables in the Galactic System	364
Monographs on Variable Stars	365
References	367
19. EMPIRICAL DATA ON ECLIPSING BINARIES	370
<i>Frank Bradshaw Wood</i>	
1. History	370
2. Catalogues and Publications	371
3. Period and Period Changes	373
4. Tables of Eclipsing Binaries	375
References	381
20. THE CALIBRATION OF LUMINOSITY CRITERIA	383
<i>A. Blaauw</i>	
1. Introduction	383
2. The Spectral Types A to M	384
2.1. The Early Mount Wilson Work	384
2.11. The Nature of the Systematic Errors in the Early Mount Wilson Spectroscopic Absolute Magnitudes	387
2.12. The Analyses of Russell and Moore	391
2.13. The Analyses of van Rhijn and of Strömberg	392
2.14. Modern Use of the Early Mount Wilson Catalogue	394
2.2. The Yerkes MK System	397
2.21. Miss Roman's Work on the F5-K5 Stars of Luminosity Classes II-V	397
2.22. Other Data for Late-Type Main-Sequence Stars	400
2.23. Osawa's Work on the Main-Sequence A-Type Stars	400
2.24. Summary of Calibrations for Classes A-M, II-V	400
2.3. Calibration Procedures in Some Other Modern Systems	400
2.31. Oke's Work on F5-K2 Stars	402
2.32. The Work by Hossack and Halliday on G8-K1 Stars	404
2.33. The Method of Wilson and Bappu for Types G, K, and M	404
3. Types O and B and Supergiants	406
3.1. The Fundamental Data on Absolute Magnitudes	406
3.11. The Main-Sequence Fitting Procedure, Starting from the Hyades	406

3.12 Application to η and χ Persei	409
3.13. Direct Connection of η and χ Persei with the Scorpio-Centaurus Association	409
3.14. Evaluation of Systematic Errors	411
3.2. The MK System for the Early Types and Supergiants	413
3.21. Luminosity Classes I and II	414
3.22. Luminosity Classes III-V	414
3.23. Remarks to Table 3	415
3.3. The Calibration of Hydrogen-Line Intensities for O and B Stars	415
3.31. The $H\gamma$ Intensities	415
3.32. Other Hydrogen Lines	417
References	417
21. THE ABSOLUTE MAGNITUDES OF CLASSICAL CEPHEIDS	421
<i>Robert P. Kraft</i>	
1. Introduction	421
2. The Period-Color and Period-Luminosity Relations for Cepheids in the Vicinity of the Sun	423
2.1. The Period-Color Relation	423
2.2. The Period-Luminosity Law	428
3. Properties of the Color-Magnitude Diagram for Galactic Cepheids	434
4. A Comparison of Cepheids in the Small Magellanic Cloud with Those in the Vicinity of the Sun	437
5. Some Anomalous Classical Cepheids of the Distant Northern Milky Way	442
References	445
22. THE LUMINOSITIES OF VARIABLE STARS	448
<i>Cecilia Payne-Gaposchkin and Sergei Gaposchkin</i>	
1. Introduction	448
2. Variable Stars in Stellar Groups	450
2.1. Luminosities Referred to Galactic Clusters	450
2.2. Luminosities Referred to Globular Clusters	451
2.3. Luminosities of Variable Stars in Spiral Galaxies	452
2.4. Luminosities of Variable Stars in Irregular Galaxies	453
2.5. Luminosities of Variable Stars in Elliptical Galaxies	453
2.6. Variable Stars in Binary Systems	453
3. Luminosities of Intrinsic Variables	453
3.1. Classical Cepheids	453
3.2. The RR Lyrae Stars	455

3.3. Intrinsic Variables Associated with Cepheids	458
3.4. Intrinsic Variables Referred to RR Lyrae Stars	461
3.5. Intrinsic Variables in Binary Systems	464
3.6. Long-Period Variables	465
3.7. Beta Canis Majoris Stars	466
3.8. Delta Scuti Stars (Dwarf Cepheids)	467
