

CONTENTS

1 G. I. TAYLOR, Opening Address	1
---	---

PART I. THE OBSERVATIONAL DATA

2 R. MINKOWSKI, The Observational Background of Cosmical Gasdynamics	3
3 A. BLAAUW, Extragalactic Stellar Systems	13
4 J. H. OORT, Information on Velocity and Density Distribution in the Interstellar Gas Derived from Absorption Lines and 21-cm Radiation	20
5 B. J. BOEK, Photographic Studies of Southern Emission Nebulae	27
DORRIT HOFFLEIT, Observational Features in Carina of Interest for Dynamical Theories of Interstellar Clouds and Stellar Evolution.	29
B. J. BOEK and C. M. WADE, A Preliminary Classification System for H α -Emission Nebulae	35
6 G. SHAJN, Certain Peculiar Structures in Interstellar Clouds	37
7 A. D. THACKERAY, Characteristics of Some Diffuse Nebulae in the Magellanic Clouds	39
8 H. C. van de HULST, A Survey of Problems and Suggested Solutions	42

PART II. PHYSICAL CONDITIONS OF THE INTERSTELLAR GAS

9 A. SCHLÜTER, The Electrical Conductivity of the Interstellar Gas	46
10 Discussion on Electrical Conductivity in Gas Dynamics	51
11 M. P. SAVEDOFF, The Energy Balance of the Interstellar Medium.	55
12 F. D. KAHN, The Heating and Cooling of Interstellar Gas Clouds	60
13 H. ZANSTRA, On the Formation of Condensations in a Gaseous Nebula	70
14 M. J. SEATON, The Forbidden Line Spectra of Gaseous Nebulae	75
15 Discussion on Condensation and Temperature Regulation in Interstellar Gas Clouds	82

PART III. SHOCK WAVES AND COLLISION PROBLEMS

16 A. KANTROWITZ, Experiments on the Radiation and Ionization Produced by Strong Shock Waves	85
17 Discussion on Shock Waves and Rarefied Gas Dynamics	97
18 R. MINKOWSKI, Radiative and Collisional Excitation	106
19 Discussion on Luminous Edges and Collisional Excitation	111
20 F. D. KAHN, The Collision of Two Highly Ionized Clouds.	115

**PART IV. TURBULENCE AND MAGNETIC FIELDS
IN A COMPRESSIBLE GAS**

21 G. K. BATCHELOR, Turbulence and Magnetic Fields	117
22 M. J. LIGHTHILL, The Effect of Compressibility on Turbulence	121
23 G. COURTÈS, Internal Motion Observed in Emission Regions	131
24 Discussion on the Measurement of Turbulence in Nebulae	134
25 L. BIERMANN, Remarks Concerning Interstellar Magnetic Fields	137
26 Discussion on Interstellar Magnetic Fields	141

PART V. FORMATION OF COSMIC CLOUDS AND GALAXIES

27 A. SCHLÜTER, Preliminary Remarks on the Dynamics of the Interstellar Medium	144
28 J. H. OORT, Outline of a Theory on the Origin and Acceleration of Interstellar Clouds and O-Associations	147
29 Discussion on the Expansion of Cosmic Clouds and on Luminous Fronts	159
30 E. SCHATZMAN and F. D. KAHN, On the Motion of H I and H II Regions	163
31 C. F. von WEIZSÄCKER, Problems Connected with the Origin of Spiral Arms	167
32 S. von HOERNER, Contribution to the Turbulence Theory of Galaxies	172
33 D. W. SCIAMA, A Model for the Formation of Galaxies.	175
34 Discussion on Turbulence in Galaxies	178
35 F. HOYLE, On Contraction in Cosmic Gaseous Masses	181

PART VI. ACCRETION PROBLEMS

36 W. H. McCREA, Motion of Stars Through Clouds: Accretion	186
37 E. SCHATZMAN, Étude Physique de l'Accrétion.	193
38 General Discussion on Accretion Processes	206

PART VII. GAS AND DUST IN THE INTERSTELLAR MEDIUM

39 L. BIERMANN, On the Mass Balance of the Interstellar Medium	212
40 M. P. SAVEDOFF, The Relation between Dust and Gas in Inter-	
stellar Clouds	218
41 B. J. BOK, Remarks on the Constancy of the Ratio between	
Gas and Dust in Interstellar Space.	221

PART VIII. CONCLUSIONS

42 J. M. BURGERS, Summary of the Aerodynamical Aspects of	
the Symposium	228
43 T. GOLD, Concluding Remarks on Turbulence in the Interstellar	
Gas	238
44 Final General Discussion	241
