

CONTENTS

Preface	v
Part I. Stellar magnetic fields	
I.1. Observational methods (Chairman: Y. Öhman)	
H. Gollnow, Introductory report	1
J. Rayrole, Mesure de l'écart des composantes Zeeman sur des spectres d'étoiles magnétiques	16
I.2. Observational results (Chairman: G. Burbidge)	
H. Gollnow, Introductory report	23
T. Jarzebowski, Some remarks on observational data of magnetic stars	64
W. L. W. Sargent and L. Searle, Abundances of light elements in magnetic A-stars	73
J. L. Greenstein, Some implications of the alteration of the composition of magnetic stars	78
W. Unno and S. Kato, Preliminary observations of the magnetic field of $\alpha^2\text{CVn}$	84
I.3. Theoretical aspects (Chairman: L. Woltjer)	
L. Mestel, Introductory report	87
I. W. Roxburgh, Some steady, self-consistent solutions for rotating magnetic stars	103
R. Steinitz, Overstability in rotating stars	117
T. Jarzebowski, Remarks on the interpretation of variability of magnetic stars	126
Part II. Solar magnetic fields	
II.1. Large scale solar magnetic fields (Chairman: T. Gold)	
R. Howard, Introductory report	129
H. von Klüber, Remark about the general solar magnetic field	144
G. Godoli, Remarks on the apparent and true position of the poles of the solar magnetic field	149
E. Schatzman, On the evolution of magnetic fields	153
II.2. Small scale solar magnetic fields, plages, filaments: observations (Chairman: J. W. Evans)	
R. Leighton, Introductory report	158

R. Michard and J. Rayrole, Observations systématiques des champs magnétiques des centres d'activité à l'Observatoire de Meudon	169
Y. Öhman, A suggested method for measuring solar magnetic fields by using a birefringent filter with twin transmission bands	173
A. Dollfus, Recherches sur la structure fine du champ magnétique photosphérique	176
G. Brückner, Polarization in resonance lines of prominences	189
V. Bumba, Short note on the connections between the facular network and sunspots	192
H. Zirin, Observations of chromospheric fine structure	197
L. Davis, Mariner II observations relevant to solar fields	202
II.3. Small scale solar magnetic fields, plages, filaments: theory (Chairman: E. Schatzman)	
J. B. Zirker, Introductory report	208
E. N. Parker, Some remarks on the influence of the granulation on the magnetic field	232
J. Tuominen, Amplification of magnetic fields within sunspot groups	236
II.4. Sunspots: observations (Chairman: R. Michard)	
A. B. Severny, Introductory report	238
V. E. Stepanov, The structure and the motion of magnetic fields in sunspots	267
K. Nishi and W. Unno, Measurements of the magnetic vector in sunspots	273
C. Zwaan, The influence of scattered light on line intensity measurements	277
P. Maltby, On the velocity field of sunspots	281
G. Brückner, Measurements of turbulent velocities in sunspots	293
H. Elsässer and K. Fricke, Analysis of the sunspot Mt. Wilson No. 11730	297
V. Bumba, Some notes on sunspot fine structure	305
K. Fredga, Coupling between sunspot activity of northern and southern hemispheres	310
II.5. Sunspots: theory (Chairman: L. Biermann)	
R. Danielson, Introductory report	314
N. O. Weiss, Magnetic flux tubes and convection in the sun	330
L. Mestel, The structure of sunspot umbras	333
E. Schatzman, Model of force free fields	337
E. Schatzman, On the motion of a subphotospheric tube of gases	338
II.6. Solar flares: Observation (Chairman: A. Dollfus)	
H. Zirin, Introductory report	339
A. Dollfus, La configuration du champ magnétique autour du soleil	355

A. B. Severny, On the changes of magnetic fields connected with flares	358
F. L. Deubner, On the reorganization of field lines during a flare	369
G. E. Moreton, Flare-associated filament changes	371
Y. Avignon, C. Caroubalos, M. J. Martres, M. Pick, Optical characteristics of type IV -associated flares	373
II.7. Flares: theory (Chairman: F. Kahn)	
P. A. Sweet, Introductory report	377
R. K. Jaggi, A mechanism for the dissipation of magnetic fields in solar flares	384
T. Gold, The dissipation of magnetic energy in the upper atmosphere of the sun	390
R. M. Green, Modes of annihilation and reconnection of magnetic fields	398
Part III. General aspects of stellar and solar magnetic fields	
T. G. Cowling, Introductory report (Chairman: L. Davis)	405
G. R. Burbidge, On the anomalous element abundances of magnetic stars	418
L. Mestel, "Fossil" magnetic fields	420
L. Mestel, A note on hydromagnetic turbulence	424
F. Krause, A dynamo model for the 22-year cycle of the solar magnetic field	426
M. Kopecky, Some notes on the hydromagnetic theories of the periodicity of solar activity	431
I. K. Csada, Dynamo theory for the solar magnetic cycle	434
Part IV. Summary	
IV.1. Stellar magnetic fields (Chairman: R. Lüst)	
J. L. Greenstein, Summary report	437
IV.2. Theoretical aspects (Chairman: R. Lüst)	
L. Woltjer, Summary report	449
