Preface	v
Contributors	xxi
1. Galactic Nonthermal Continuum Emission	
CHRIS J. SALTER and ROBERT L. BROWN	1
1.1 Introduction	1
1.1.1 Historical Preface	1
1.1.2 Early Surveys of Galactic Radio Emission	3
a. Angular Distribution of the Cosmic Radio Waves	3
b. Spectral Distribution of the Cosmic Radio Waves	5
c. The Situation Circa-1956	6
1.2 Physical Processes	6
1.2.1 Synchrotron Radiation	6
a. Single Particle Emission	7
b. Radiation from an Ensemble of Particles	9
c. Influence of the Medium	10
1.2.2 The Faraday Effect	11
1.3 Total Intensity Observations of the Galactic Radio Continuum	12
1.3.1 The Medium-Resolution Surveys	13
1.3.2 High-Resolution Surveys of the Galactic Plane	15
1.3.3 The Galactic Loops and Spurs	15
1.3.4 The Nonthermal Radiation and Galactic Structure	18
1.3.5 A Galactic Radio Halo?	22
1.4 The Spectrum of the Nonthermal Emission	23
1.4.1 The Galactic Spectrum Above 10 MHz	24
1.4.2 The Very-Low-Frequency Spectrum	25
1.4.3 The Energy Spectrum of Cosmic-Ray Electrons	26
1.5 Linear Polarization of the Nonthermal Emission	28
1.5.1 Surveys of Linear Polarization of the Galactic Emission	28
1.5.2 Implications for the Local Magnetic Field	30
1.5.3 Magnetic Fields in the Galactic Loops	31
1.5.4 Rotation Measure Data and the Galactic Magnetic Field	32
1.6 The Galactic Nonthermal Radiation in Perspective	33
Recommended Reading	34
References	34

2. HII Regions and Radio Recombination Lines	
MARK A. GORDON	37
2.1 Ionized Interstellar Hydrogen	37
2.1.1 Emission Nebulae	37
2.1.2 Diffuse Thermal Background	38
2.2 Radiation Transfer	38
2.3 Continuum Thermal Emission (Bremsstrahlung)	40
2.3.1 Absorption and Emission Coefficients	40
2.3.2 Transfer Equation for Continuum Radiation	41
2.3.3 Low-Frequency Radiation from HII Regions	42
2.3.4 High-Frequency Radiation from HII Regions	42
2.3.5 Integrated Observations of HII Regions	42
2.3.6 Reality and the “Homogeneous Nebula” Approximation	43
2.3.7 Continuum Observations of HII Regions	44
2.3.8 Thermal Emission from Dust	45
2.4 Basic Theory of Radio Recombination Lines	46
2.4.1 Line Frequencies	47
2.4.2 Shape Function	48
2.4.3 Absorption and Emission Coefficients	50
2.4.4 Transfer Equation for Line Radiation	52
2.5 Refinements to the Transfer Equations	53
2.5.1 Local Thermodynamic Equilibrium	53
2.5.2 Departures from LTE	54
2.5.3 Turbulence Broadening	57
2.5.4 Pressure Broadening	58
2.6 Single-Dish Observations of Radio Recombination Lines from HII Regions	59
2.6.1 Early Observations of Integrated Line Intensities	59
2.6.2 Non-LTE Density-Gradient Models	62
2.6.3 Clumped Models	64
2.6.4 Comparison of the Density-Gradient and Clumped Models	65
2.6.5 Empirical Determinations of Electron Temperature	67
2.7 Exploration of the Milky Way by Radio Recombination Lines	68
2.7.1 Galactic Distribution of HII Regions	68
2.7.2 Galactocentric Variations of Electron Temperatures	71
2.7.3 Abundance Ratio of Helium to Hydrogen	71
2.7.4 The Diffuse Component	77
2.8 Radio Observations of HII Regions with High Angular Resolution	81
2.8.1 Continuum Observations	81
2.8.2 Recombination-Line Observations	82
2.9 Other Aspects of Radio Recombination Lines	83
2.9.1 Low Frequencies	83
2.9.2 Zeeman Effect	85
2.9.3 The Sun	86

2.9.4 Planetary Nebulae	88
2.9.5 Dark Clouds	88
2.9.6 Galaxies and Quasars	90
Recommended Reading	92
References	92

3. Neutral Hydrogen and the Diffuse Interstellar Medium

SHRINIVAS R. KULKARNI and CARL HEILES	95
3.1 Introduction: Fundamentals	95
3.1.1 Radiative Transfer and Excitation of the HI Line	96
3.1.2 Observations of the Diffuse Medium	101
a. Brief Review of the Four Phases: CNM, WNM, WIM, HIM .	101
b. Galactic Distribution of HI	103
3.1.3 Interstellar Pressure	104
a. Excitation of CI Fine Structure	105
b. Excitation of the CII Fine-Structure Lines	106
c. Pressure of the WIM	106
3.1.4 Theory of the Kinetic Temperature of Diffuse Interstellar Gas	107
a. Cooling Processes	107
b. Heating Processes	108
c. The Equilibrium Temperature	110
d. Is Statistical Equilibrium Always Obtained?	111
3.1.5 Elements of Interstellar Gas Dynamics	111
a. Static Equilibrium: The z-Structure in the Galaxy	112
b. Static Equilibrium: A Uniform Spherical Magnetized Cloud .	112
c. Transient Features: Shocks	113
3.1.6 Two Famous Models of the Interstellar Medium	115
3.2 Structure of the Diffuse Interstellar Medium: HI Emission	118
3.2.1 Low-Velocity Gas	118
a. Shells	118
b. Filaments	122
c. Major HI Concentrations Around Dark Clouds and Newly Formed Stars	123
d. Shapes of HI Clouds	123
e. Structure of HI Clouds	124
3.2.2 Intermediate-Velocity Gas	125
3.2.3 Supershells and “Worms”	126
3.3 Temperature and Ionization of the Diffuse Interstellar Medium	126
3.3.1 HI Absorption: Techniques, Data, and Analysis	126
a. Techniques and Data	127
b. Derived Spin Temperature: Definition and Limitations	128
3.3.2 Temperature of Warm HI	129
3.3.3 Temperature of the Cold HI (CNM)	131

a. Classical Absorption Studies: The $T\text{-}\tau$ Relation	131
b. Statistics of Clouds	132
3.3.4 Temperature Structure of HI Clouds	133
a. Temperature Structure and the $T\text{-}\tau$ Relation	134
b. Physical Implications	134
3.3.5 Ionization of the Diffuse Interstellar Medium	135
a. Observations	135
b. Ionization Within Diffuse Clouds	137
c. Where Do the Electrons Reside?	137
d. The Energy Source for the WIM	138
3.3.6 Filling Factors of the WIM, WNM, and CNM	140
3.4 Interstellar Magnetic Fields	142
3.4.1 Methods of Measurement	142
a. B_{\perp} : Linear Polarization of Starlight	142
b. B_{\perp} : Linear Polarization of Synchrotron Radiation	142
c. B_{\perp} : Linear Polarization of Radio-Wavelength Spectral Lines .	143
d. B_{\parallel} : Faraday Rotation	143
e. B_{\parallel} : Zeeman Splitting	143
f. Faraday Rotation Versus Zeeman Splitting	144
3.4.2 Fields in External Galaxies	144
3.4.3 The Galactic Field on Scales Above 100 pc	144
a. The Field Strength	144
b. The Field Direction	146
3.4.4 The Galactic Field on Scales of 100 pc and Below	147
3.5 Summary	149
Recommended Reading	151
References	151
4. Molecules as Probes of the Interstellar Medium and of Star Formation	
BARRY E. TURNER	154
4.1 Introduction	154
4.1.1 Historical Perspective	154
4.1.2 The Central Role of Molecular Spectroscopy	155
4.2 The Large-Scale Morphology of the ISM	158
4.2.1 The Physical Regimes of the ISM	158
a. “Coronal” Gas	158
b. Intercloud Gas	158
c. Diffuse Interstellar Clouds	159
d. Cold Dark Clouds	160
e. Globules	160
f. Giant Molecular Clouds	160
g. Hot Molecular Cores in GMCs	161
4.2.2 The Morphology of Dense Molecular Clouds	162
4.2.3 GMCs and Spiral Arms	163

4.3 The Nature of Star-Forming Regions	165
4.3.1 Small Star-Forming Cores in SMCs and GMCs	165
4.3.2 Massive Star-Forming Cores in GMCs	166
4.3.3 Large-Scale Relationships of Star-Forming Regions	167
a. Low-Mass-Star-Forming Regions	168
b. Massive-Star-Forming Regions	169
4.3.4 Intermediate-Scale Structure: Velocity Outflows and Disks	170
4.3.5 Magnetic Fields	172
4.3.6 Small-Scale Structure of Star-Forming Regions	174
a. The Orion Molecular Core	174
b. Other Star-Forming Cores	176
4.3.7 A Summary of Star Formation Morphology	179
4.4 The Stability of Molecular Clouds and Cores	180
4.4.1 Star Formation Rates and the Stability of Molecular Clouds	180
4.4.2 Global Relations Between (n , L , Δv) for Molecular Clouds	180
4.4.3 Rotation	182
4.4.4 Magnetic Fields	182
4.4.5 Stellar Winds	183
4.4.6 “Gravito-Turbulence” or “Star Cloud Turbulence”	183
4.5 The Formation of Stars	184
4.5.1 Low-Mass Stars from Low-Mass Cores	184
4.5.2 Formation of Massive Stars from Massive Cores	185
a. A Summary of Observational Constraints	185
b. Massive-Star Formation: Enhanced Accretion plus Shocks	187
4.5.3 A Stochastic Picture of Star Formation	188
4.6 Future Prospects	189
4.6.1 High-Resolution Studies of Star Formation	190
a. Global Aspects As Seen in Other Galaxies	190
b. Star-Forming Cores	190
c. The Question of the Elusive “Protostar”	191
d. Ori(KL) and Detailed Studies of Star-Forming Regions	192
4.6.2 Submillimeter and Far-IR Studies	192
a. Far-IR Studies	192
b. Submillimeter Studies	193
Recommended Reading	195
References	195
5. Interstellar Molecules and Astrochemistry	
BARRY E. TURNER and LUCY M. ZIURYS	200
5.1 Molecules in Space: An Overview	200
5.1.1 A Brief History	200
5.1.2 The Presently Known Interstellar Molecules	204
5.1.3 Interstellar Chemistry: Some Generalities	206
5.2 Where Molecules Are Found: Basic Morphology of the Dense Interstellar Medium	208

5.2.1 Diffuse Clouds	209
5.2.2 Envelopes of GMCs and SMCs (“Dark Clouds”)	211
5.2.3 Cold Cores and Low-Mass Star-Forming Cores in Molecular Clouds	212
5.2.4 Warm Massive Cores in GMCs	214
5.2.5 Shocked Regions	215
5.2.6 Circumstellar Envelopes	218
5.3 Molecular Abundances and Their Determination	219
5.3.1 Method of Analysis	220
a. The Simplest Derivation of Column Densities	220
b. Elementary Column Density Estimates When Many Transitions Are Observed	222
c. Column Density Estimates from Radiative Transfer Techniques	223
5.3.2 Problems in Abundance Determinations	223
a. Clumping	223
b. Fractional Abundances	224
c. Collisional Cross Sections	225
d. Kinetic Temperature	225
e. Radiation Fields	226
5.3.3 Representative Abundances	226
5.4 The Four Basic Schemes of Interstellar Chemistry	226
5.4.1 Ion-Molecule Chemistry	230
5.4.2 Surface Chemistry on Dust Grains	235
a. Difficulties for Grain-Surface Chemistry: Diffuse and Cold Clouds	236
b. Grain-Surface Chemistry in Warm Clouds	237
c. Summary	238
5.4.3 Shock Chemistry	239
5.4.4 Circumstellar Chemistry	241
a. Carbon-Rich Envelopes	243
b. Oxygen-Rich Envelopes	243
c. Summary	244
5.5 Current Dilemmas and Future Directions	244
5.5.1 The Composition of Interstellar Dust Grains	244
5.5.2 Diffuse Bands	245
5.5.3 Synthesis of Complex Molecules	246
5.5.4 Ring Molecules	246
5.5.5 NO Bonds	247
5.5.6 Chemistry Involving Second- and Third-Row Elements . . .	248
5.5.7 “Biological” Molecules	248
5.5.8 Unidentified Lines	249
5.5.9 A Final Perspective: What Has Astrochemistry Revealed? . .	249
Recommended Reading	250
References	250

6. Astronomical Masers

MARK J. REID and JAMES M. MORAN	255
6.1 Introduction	255
6.2 Maser Theory	257
6.2.1 Radiative Transfer	257
6.2.2 Input Sources	262
6.2.3 Geometry and Apparent Sizes	263
6.2.4 Saturation	265
6.2.5 Line Widths	267
6.2.6 Polarization	268
6.2.7 Pump Models	269
a. Interstellar Maser Pumps.....	273
b. Stellar Maser Pumps	273
6.3 Interstellar Masers	274
6.3.1 H ₂ O Masers	275
6.3.2 OH Masers	278
6.4 Stellar Masers	282
6.4.1 Supergiants	287
6.5 Extragalactic Masers	288
6.6 Interstellar Scattering	289
6.7 Distance Measurements	290
Recommended Reading	293
References	293

7. The Structure of Our Galaxy Derived from Observations of Neutral Hydrogen

W. BUTLER BURTON	295
7.1 Observations of Galactic Neutral Hydrogen	295
7.2 Kinematics of Galactic Neutral Hydrogen	303
7.2.1 Velocities Due to Differential Galactic Rotation	303
7.2.2 The Galactic Rotation Curve	305
7.2.3 Galactic Constants	312
7.2.4 Deviations from Circular Symmetry and Circular Motions ..	317
7.3 Mapping the Galaxy Using Neutral Hydrogen Observations	322
7.3.1 Line Profile Characteristics Caused by Geometrical Effects ..	322
7.3.2 Profile Characteristics Caused by Kinematic Irregularities ..	324
7.3.3 Some Remarks on the Spiral Structure of the Galaxy	326
7.4 The Inner-Galaxy Gas Layer	328
7.4.1 Radial Distribution of the Inner-Galaxy Gas and Dust Layer	329
7.4.2 Thickness and Flatness of the Inner-Galaxy Gas and Dust Layer	333
7.4.3 Other Parameters of the Inner-Galaxy Gas and Dust Layer ..	337
7.5 The Outer-Galaxy Gas Layer	339

7.5.1 The Shape of the Warped, Flaring, Outer-Galaxy Gas Layer	340
7.5.2 Some Characteristics of the Warped Gas Layer in Other Galaxies	347
7.5.3 Brief Remarks on the Phenomenon of High-Velocity Clouds	350
Recommended Reading	354
References	354
 8. The Galactic Center	
HARVEY S. LISZT	359
8.1 Introduction and Apologia	359
8.2 Radio Continuum Emission from the Provinces of Sagittarius	360
8.2.1 Sgr D	360
8.2.2 Sgr B	360
8.2.3 Sgr C	362
8.2.4 Sgr E	363
8.2.5 Taking Stock of the Situation in the Provinces	364
8.3 Sgr A and Its Immediate Environment	365
8.3.1 The Compact Source Sgr A*	365
8.3.2 Sgr A East Is Both East and West	368
8.3.3 Sgr A West	371
a. A Massive Rotating Ring	371
b. A Small “Bar”	371
8.3.4 Sgr A* Redux	372
8.3.5 All the King’s Horses	372
8.4 Material in Sgr A Observed on 10- to 50-pc Scales	372
8.5 The Neutral Gas Reservoir in the Inner Galactic Regions	374
8.5.1 The “Expanding 3-kpc Arm”	374
8.5.2 A Tilted Disk—The Galaxy’s Bar?	374
8.5.3 More on the Central Gas Reservoir	376
Recommended Reading	379
References	379
 9. Radio Stars	
ROBERT M. HJELLMING	381
9.1 The Early Years	381
9.1.1 The Search for the Radio Sun	381
9.1.2 Early Flare Star Observations	382
9.1.3 When Is a Star a Radio Star?	382
9.1.4 The “Twilight” Years	383
9.1.5 The Dawn of Stellar Radio Astronomy	385
9.2 Fundamental Radio Emission Processes and Stellar Radiative Transfer	386
9.2.1 Radiative Transfer in Stellar Environments	386

9.2.2 Fundamental Radiation Processes	389
a. Thermal Bremsstrahlung	389
b. Magneto-Bremsstrahlung	389
c. Thermal Versus Nonthermal and Incoherent Versus Coherent	391
9.3 Solar Radio Emission	391
9.3.1 Types of Solar Radio Emission	391
9.3.2 Quiet Sun Emission and the Slowly Varying Component	392
9.3.3 Enhanced Radio Emission Associated with Sunspots and Active Regions	393
9.3.4 Solar Noise Storms	395
9.3.5 Solar Radio Bursts	396
a. Radio Emission Associated with First-Stage Flares	396
b. Radio Emission Associated with Second-Stage Flares	397
9.3.6 The Solar Wind	398
9.4 Flare Stars and Active Binaries	398
9.4.1 Flare Star Radio Emission	398
9.4.2 “Radio-Active” Binaries—Particularly RS CVn’s	400
9.4.3 Pre-Main-Sequence Stars	405
9.5 Stellar Winds	405
9.5.1 Ionized Stellar Winds	405
9.5.2 Stellar Wind Observables	405
9.5.3 Cool, Weakly Ionized Winds	407
9.5.4 VV Cephei Binaries—Ionized Subregions of Cool Supergiant Winds	407
9.5.5 Symbiotic Stars—Interacting Winds and Ionized Subregions of Winds	409
9.6 Cataclysmic Variables	409
9.6.1 Classical Novae	409
9.6.2 Recurrent Novae	411
9.6.3 Dwarf Novae	415
9.6.4 Magnetic Cataclysmic Variables	415
9.7 Radio-Emitting X-Ray Binaries	416
9.7.1 Summary of Major Radio-Emitting X-Ray Binaries	416
9.7.2 Relativistic Jets and Synchrotron Flaring in Cyg X-3	417
a. Cyg X-3 as a Synchrotron Flaring Source	417
b. Cyg X-3 as a Relativistic Jet Source	420
9.7.3 Periodic Radio Variations in Cir X-1, LSI +61°303, and Cyg X-3	420
9.7.4 Relativistic Jets in SS433	421
9.7.5 Evolving Bubbles, Layers, and Cones of Relativistic Electrons	426
a. Type of Geometry for Synchrotron-Radiating Regions	426
b. Radio-Emitting Bubbles and Layers with Spherical Symmetry	427
c. Evolution of Conical Radio Jets	429

9.7.6 Sco X-1—Radio Variable with Companion Double Radio Source	431
9.7.7 The Very Large Remnants Around SS433 and Cir X-1	431
9.7.8 Other X-Ray Binaries	433
9.7.9 Transient X-Ray/Radio Stars	433
9.7.10 A Unified View of Radio-Emitting X-Ray Binaries	433
9.8 Future Work on Radio Stars	434
Recommended Reading	435
References	435
10. Supernova Remnants	
STEPHEN P. REYNOLDS	439
10.1 Introduction	439
10.1.1 History	439
10.2 Supernovae	442
10.2.1 Type I and Type II	442
10.2.2 Rates	444
10.3 Observed Properties of Supernova Remnants	445
10.3.1 Radio Characteristics	445
10.3.2 Optical Characteristics	447
10.3.3 X-Ray Characteristics	455
10.3.4 Variability	456
10.3.5 Statistics of Supernova Remnants	457
10.3.6 Radio Supernovae	460
10.4 Theory	460
10.4.1 Evolution	460
10.4.2 Relation of Evolutionary Theory to Observations	465
10.4.3 Crablike Supernova Remnants	466
10.4.4 Nonthermal Emission from Supernova Remnants	468
10.4.5 Radio Supernovae	472
10.5 Collective Interactions of Supernova Remnants with the Galaxy	473
10.5.1 Structure of the Interstellar Medium	473
10.5.2 Energy and Mass Input into the Interstellar Medium	473
10.5.3 Cosmic Rays	474
10.6 Future Prospects	475
Recommended Reading	476
Catalogues of Galactic Supernova Remnants	476
References	476
11. Pulsars	
DON C. BACKER	480
11.1 Introduction	480
11.1.1 Brief History of Neutron Stars	480
11.1.2 New Types of Pulsars	481

11.2 Basic Properties	482
11.2.1 Intensity Spectra	482
11.2.2 Dispersion and Distance Scale	482
11.2.3 Pulse Timing	484
11.2.4 Standard Model of Emission Mechanism	484
11.3 Pulse Morphology and Polarization	485
11.3.1 Pulse Components	485
11.3.2 Polarization	487
11.3.3 Hollow-Cone Beam Model	487
11.3.4 More Polarization Effects	489
11.3.5 A Beam Model	490
11.3.6 Interpulses and Steady Emission	490
11.4 Intensity Fluctuations	491
11.4.1 Micropulses	491
11.4.2 Subpulses	492
11.4.3 Periodic Subpulse Phenomena	493
11.4.4 Pulse Nulling	493
11.4.5 Other Modulations	495
11.5 Interstellar Propagation	496
11.5.1 Neutral Hydrogen Absorption	496
11.5.2 Thermal Plasma Dispersion	496
11.5.3 Birefringence	497
11.5.4 Secular Variations of Path Integrals	498
11.5.5 Diffraction Caused by Interstellar Turbulence	498
a. Thin-Screen Model	500
b. Pulse Broadening	501
c. Scintillation	501
d. Scattering Measure	503
11.5.6 Refraction by Interstellar Turbulence	503
11.6 Timing and Astrometry	504
11.6.1 Time of Arrival Measurements	504
11.6.2 Time of Arrival Analysis	504
11.6.3 Interpretation of Pulsar Spin Properties	506
11.6.4 Astrometry	507
11.7 Binary and Millisecond Pulsars	508
11.7.1 The New Pulsars	508
11.7.2 Timing a Binary Pulsar	508
11.7.3 Timing a Millisecond Pulsar	511
11.8 Radio Emission Mechanism	513
11.8.1 Basic Requirements	513
11.8.2 Emission Site	514
11.8.3 Polar-Cap Models	514
11.9 Origin and Evolution	515
11.9.1 Introduction	515
11.9.2 Galactic Distribution	516
11.9.3 Period Evolution	517

11.9.4 Binary Pulsar Evolution	519
Recommended Reading	520

14. The Microwave Background Radiation

JUAN M. USON and DAVID T. WILKINSON	603
14.1 Introduction	603
14.1.1 The Discovery	603
14.1.2 Cosmological Setting	603
14.2 The Spectrum of the Microwave Background	605
14.2.1 Summary	605
14.2.2 Heterodyne Radiometer Methods ($\lambda \geq 3$ mm)	607
14.2.3 Bolometric Measurements ($\lambda \leq 3$ mm)	612
14.2.4 Measurements Using Interstellar Molecules	615
14.2.5 Summary and Future Prospects	616
14.3 Polarization of the Microwave Background	617
14.4 Anisotropy Searches	618
14.4.1 Small-Scale Measurements	618
a. A Scenario	618
b. Measurements	621
c. Constraints on Cosmological Models	625
d. Near-Future Improvements	626
14.4.2 Measurements of Large-Scale Structure	627
a. A Scenario	627
b. Measurements	629
c. Likely Near-Future Improvements	630

14.5 The Sunyaev-Zel'dovich Effect	632
14.5.1 Concept and Cosmological Consequences	632
14.5.2 Measurements	635
14.5.3 Cosmological Applications	637
Recommended Reading	638
References	638
 15. Radio Sources and Cosmology	
JAMES J. CONDON	641
15.1 Introduction	641
15.2 Basic Relations	642
15.3 The “World Picture” and Source Evolution	643
15.4 Source Population Data	646
15.4.1 The Local Luminosity Function	646
15.4.2 Source Counts	649
15.4.3 Spectral-Index Distributions	652
15.4.4 Redshift/Spectral-Index Diagrams	653
15.4.5 Redshift and Luminosity Distributions of Strong Sources	653
15.4.6 Optical Constraints	653
15.5 Evolutionary Models	656
15.5.1 Source Distribution Equations	657
15.5.2 Evolutionary Models of Radio Luminosity Functions	658
15.6 Source Size Evolution	662
15.6.1 The Angular Size-Redshift Relation	662
15.6.2 The Angular Size-Flux Density Data	664
15.6.3 Models of the Angular Size-Flux Density Relation	665
15.7 The Faint-Source Population	667
15.8 Isotropy and Homogeneity	669
15.9 Cosmology Made Simple: The Shell Model	671
15.10 What Next?	675
Recommended Reading	676
References	676
 Index	679
