<b>List of tables</b>	xii
<b>List of figures</b>	xv
<b>Preface</b>	xix
<b>1 Overview</b>	<b>1</b>
1.1 Where do we stand?	3
1.2 Why does anyone care?	4
1.3 Stellar evolution	5
1.4 Nuclear energy generation and neutrino fluxes	10
1.5 Uncertainties in the predictions	13
1.6 Experiments are required for progress	17
1.7 The $^{37}\text{Cl}$ experiment	17
1.8 The Kamiokande II experiment	20
1.9 A geochemical experiment: $^{98}\text{Mo}$	21
1.10 Gallium detectors	22
1.11 Next-generation experiments	24
1.12 Electronic detection of pp neutrinos	26
1.13 Coherent scattering detectors	27
1.14 Some explanations of the solar neutrino problem	28
1.15 Discriminating among explanations	32
1.16 The next decade	32
1.17 Questions and answers	32
<b>2 Stellar structure and evolution</b>	<b>43</b>
2.1 Life history of a star	44
2.2 Basic equations	46

2.3	Principal results	48
2.4	Present status	53
<b>3</b>	<b>Nuclear fusion reactions</b>	<b>55</b>
3.1	The essentials	56
3.2	Reaction rates	59
3.3	The pp chain	63
3.4	Neutrino fluxes and terminations of the pp chain	67
3.5	The CNO cycle	71
3.6	Energy generation	72
3.7	What remains to be done?	73
<b>4</b>	<b>The standard solar model</b>	<b>77</b>
4.1	The input parameters	80
4.2	General method	85
4.3	Some characteristics of the standard solar model	89
4.4	Helioseismology	104
<b>5</b>	<b>Nonstandard solar models</b>	<b>113</b>
5.1	The low $Z$ model	115
5.2	Iron precipitation	116
5.3	A burnt-out core	117
5.4	Rapid rotation	118
5.5	A strong magnetic field	119
5.6	A mixed-up Sun	120
5.7	Turbulent diffusion	124
5.8	Thermal instabilities	125
5.9	Hydrodynamic phenomena	126
5.10	$^3\text{He}$ instability	127
5.11	Massive mass loss	129
5.12	A central black hole	131
5.13	WIMPs	133
5.14	Q-nuclei	136
5.15	Non-Maxwellian velocity distribution	137
5.16	No $^8\text{B}$ produced or $S_{34} = 0$	139
5.17	CNO reaction dominant	140
<b>6</b>	<b>The neutrinos</b>	<b>143</b>
6.1	The neutrino-producing reactions	144

6.2	Information content	146
6.3	Neutrino energy spectra	153
6.4	Solar neutrino fluxes	157
6.5	Fluxes from other stars	165
<b>7</b>	<b>Theoretical uncertainties</b>	<b>169</b>
7.1	Logic	171
7.2	Examples	173
7.3	Neutrino cross sections	178
7.4	Power-law dependences	182
7.5	Monte Carlo simulations	187
7.6	Principal uncertainties	191
<b>8</b>	<b>Neutrino cross sections</b>	<b>193</b>
8.1	Absorption cross sections	195
8.2	Neutrino–electron scattering cross sections	214
8.3	Neutral currents	240
<b>9</b>	<b>Beyond the standard model of electroweak interactions</b>	<b>245</b>
9.1	Vacuum oscillations	247
9.2	Matter oscillations	258
9.3	Neutrino magnetic moment	284
9.4	Neutrino decay	292
9.5	WIMPs	295
9.6	Ockham’s razor	299
<b>10</b>	<b>The <math>^{37}\text{Cl}</math> experiment</b>	<b>301</b>
10.1	Standard model predictions	303
10.2	The experiment	307
10.3	The results	316
10.4	Theory versus experiment: the implications	320
10.5	Do solar neutrino fluxes vary with time?	326
10.6	Recent data	337
10.7	The future of the $^{37}\text{Cl}$ experiment	339
<b>11</b>	<b>The <math>^{71}\text{Ga}</math> experiments</b>	<b>343</b>
11.1	Predictions of the standard model	344
11.2	The experiments	347
11.3	What can be learned?	356

<b>12</b>	<b>Geochemical and radiochemical detectors:</b>	
	Mo, Tl, Li, Br, I	363
12.1	$^{98}\text{Mo}$	364
12.2	$^{205}\text{Tl}$	370
12.3	$^7\text{Li}$	372
12.4	$^{81}\text{Br}$	374
12.5	$^{127}\text{I}$	377
<b>13</b>	<b>Neutrino–electron scattering experiments</b>	<b>379</b>
13.1	Water detectors	381
13.2	Kamiokande II	384
13.3	SUNLAB	392
13.4	LVD	394
13.5	Super Kamiokande: water	396
13.6	Sudbury neutrino observatory: deuterium	396
13.7	ICARUS I: liquid argon	397
13.8	Low-temperature detectors	398
<b>14</b>	<b>Direct counting experiments</b>	<b>401</b>
14.1	SNO: $\text{D}_2\text{O}$ .	402
14.2	ICARUS: $^{40}\text{Ar}$	408
14.3	$^{115}\text{In}$	412
14.4	BOREX: $^{11}\text{B}$	416
14.5	$^{19}\text{F}$	416
14.6	Coherent scattering detectors	418
<b>15</b>	<b>Stellar collapse</b>	<b>421</b>
15.1	How a star gets into trouble	423
15.2	Neutrino emission from a standard stellar collapse	428
15.3	Neutrino bombs: how often and where?	433
15.4	Neutrinos from other galaxies	437
15.5	SN1987A	438
15.6	Expected number of events in detectors	457
<b>16</b>	<b>Synopsis and future directions</b>	<b>461</b>
16.1	What is needed	461
16.2	Solar neutrino detectors	463
16.3	Stellar collapses	469
16.4	Stellar evolution	471
16.5	Nuclear physics	476

<b>Contents</b>	<b>xi</b>
16.6 Particle physics	479
16.7 The bottom line	484
<b>Appendix: An account of the development of the solar neutrino problem, John N. Bahcall and Raymond Davis, Jr.</b>	487
<b>References</b>	531
