<i>Introduction</i>	<i>page</i> xi
<i>List of Notation</i>	xv
<i>Constants and Quantities</i>	xxiii
1 Basic observational characteristics of radio pulsars	1
1.1 Pulsar distribution in the galaxy	1
1.2 Stationary characteristics of pulsar radio emission	7
1.2.1 Pulsar period	7
1.2.2 Period derivatives	8
1.2.3 Braking index	11
1.2.4 Observed frequency range	12
1.2.5 Radio pulse width	12
1.2.6 Polarization	16
1.2.7 Mean profile shape. Rankin's classification	18
1.2.8 Inclination angle	22
1.2.9 Radio emission spectrum	25
1.2.10 Radio emission intensity	27
1.2.11 Interpulse pulsars	30
1.3 Non-stationary characteristics of radio emission	33
1.3.1 Fine structure of individual pulses	33
1.3.2 Fluctuations	39
1.3.3 Quasi-stationary processes	43
1.4 Young energetic pulsars. High-frequency radio emission	50
1.5 Pulsars in binary systems and millisecond pulsars	54
1.6 Other sources connected with neutron stars	57
2 Neutron stars	63
2.1 The formation and evolution of neutron stars	63
2.1.1 Origin of neutron stars	63
2.1.2 Magnetic field generation	66
2.1.3 Evolution of binary systems	67

2.2	Internal structure of a neutron star	70
2.2.1	The equation of state, the mass and the radius	70
2.2.2	Internal structure	74
2.3	Observed parameters of neutron stars	78
2.4	Neutron star cooling	84
2.5	Neutron star surface	88
3	Physical processes in the pulsar magnetosphere	92
3.1	Neutron star magnetosphere	92
3.2	Electron–positron plasma generation	96
3.2.1	The ignition condition	96
3.2.2	Secondary plasma	101
3.3	Radio emission generation	103
3.3.1	Normal modes	103
3.3.2	Non-linear interaction and transformation of curvature-plasma waves into transverse oscillations	106
3.4	Electric current	109
3.5	Energetics of pulsars	113
4	Electrodynamics of the pulsar magnetosphere	119
4.1	Basic equations	119
4.1.1	Simplification of the equations	121
4.1.2	Boundary conditions	126
4.2	The axisymmetric case	128
4.2.1	Statement of the problem	128
4.2.2	Structure of the magnetosphere	132
4.2.3	Compatibility relation	140
4.2.4	The structure of the magnetosphere in the presence of longitudinal current and the potential Ψ	143
4.3	Boundary layer	148
4.3.1	The structure of the boundary layer	148
4.3.2	The shock wave	155
4.3.3	Closure of current	156
4.4	An arbitrary angle between the rotation and magnetic axes of a pulsar	158
4.4.1	Complete corotation	158
4.4.2	Magnetosphere in the presence of longitudinal current and the potential Ψ	167
4.4.3	The compatibility relation for $\chi \neq 0$	170
4.5	The dynamics of neutron star rotation and the energy losses of a pulsar	175
4.5.1	Surface current	175

4.5.2	Moment of forces	178
4.5.3	Star rotation deceleration	180
4.5.4	Energy losses of a pulsar	184
4.5.5	Vacuum losses	187
5	Generation of electron–positron plasma in the pulsar magnetosphere	193
5.1	Basic equations	193
5.2	The double layer	201
5.2.1	The distribution function of curvature photons	203
5.2.2	The distribution function of electrons and positrons	205
5.2.3	The ‘breakdown’ potential	210
5.2.4	The ignition criterion	214
5.3	Plasma multiplication	215
5.3.1	Deceleration of a primary beam	215
5.3.2	Curvature photons	217
5.3.3	The cascade process of synchropton generation	218
5.3.4	The properties of outflowing plasma	222
6	Pulsar radio emission	229
6.1	Electrodynamics of relativistic electron–positron plasma in a homogeneous magnetic field	229
6.1.1	Dielectric permittivity of a homogeneous plasma	229
6.1.2	Normal modes of electromagnetic oscillations	233
6.1.3	Cyclotron resonance	237
6.2	Electrodynamics of relativistic electron–positron plasma in a curvilinear magnetic field	241
6.2.1	Dielectric permittivity	241
6.2.2	Normal modes of electromagnetic oscillations	249
6.2.3	The region of cyclotron resonance	259
6.3	Non-linear processes in inhomogeneous relativistic electron–positron plasma	261
6.3.1	Specificities of non-linear interaction in a curved magnetic field	261
6.3.2	An approximate theory of non-linear stabilization	262
6.3.3	Non-linear interaction in an inhomogeneous plasma	265
6.3.4	The stationary spectrum of unstable modes	269
6.3.5	Mode transformation	273
7	Comparison of theory with observational data	278
7.1	The structure of the active region	278
7.1.1	The model of a partially filled magnetosphere	278
7.1.2	Basic parameters	284

7.2	Plasma generation	286
7.2.1	The line of extinction	286
7.2.2	'Relic' gamma-ray emission	287
7.2.3	Polar cap heating. X-ray emission	288
7.2.4	Radiation from the light surface region	291
7.3	Evolution: weakly radiating pulsars	294
7.3.1	The lifetime of radio pulsars	294
7.3.2	Evolution of individual pulsars	296
7.3.3	The braking index	298
7.3.4	Weakly radiating pulsars	302
7.4	Pulsar statistics	305
7.4.1	The kinetic equation	305
7.4.2	The source function	308
7.4.3	The inclination angle of axes χ	312
7.4.4	Interpulse pulsars	315
7.4.5	Comparison with the theory of magnetodipole losses	317
7.5	Generation of radio emission. The directivity pattern	319
7.5.1	Basic parameters	319
7.5.2	Propagation of electromagnetic waves	322
7.5.3	Amplification of curvature-plasma waves	325
7.5.4	Intensity of radio emission	327
7.6	Radio emission. Comparison with observations	333
7.6.1	Linear polarization. Two orthogonal modes	333
7.6.2	The radio window width	335
7.6.3	The structure of the mean profile	337
7.6.4	The frequency range of observed radio emission	340
7.6.5	The radio emission spectrum	341
7.6.6	Cyclotron absorption and circular polarization	343
7.6.7	The intensity L_r of pulsar radio emission	348
7.7	Non-stationary structure of radio pulses	349
7.7.1	Qualitative considerations	349
7.7.2	Excitation of longitudinal generation waves	351
7.7.3	Modulation instability of curvature oscillations	354
7.7.4	The appearance of relaxation oscillations	357
	<i>Conclusion</i>	361
	<i>Appendix</i>	362
