PREFACE TO ENGLISH EDITION	IX
FOREWORD	XI
SYMBOLS	XIII
INTRODUCTION	1
CHAPTER I. PRIMARY COSMIC RAYS ON THE EARTH	5
1. Composition of the nuclear components of cosmic rays	7
Proton and nucleus intensity	8
Protons	12
Helium nuclei	14
The <i>M</i> -group of nuclei	15
The <i>L</i> -group of nuclei	16
The <i>H</i> and <i>VH</i> -groups of nuclei	17
Distribution of elements in cosmic rays and in the Universe	19
The content of individual nuclei in groups <i>L</i> , <i>M</i> and <i>H</i>	19
Antiprotons and antinuclei	21
2. Electrons, gamma rays and neutrinos	22
Intensity of the electron-positron component on Earth	22
Gamma rays in the primary radiation	25
Absorption of gamma rays	29
The formation and absorption of neutrinos	31
The cosmic neutrino flux	32
3. The energy spectrum and degree of anisotropy of cosmic rays	35
The spectrum in the $2 \times 10^9 \lesssim \mathcal{E} \lesssim 10^{15}$ eV/nucleon energy range	35
The spectrum in the low-energy range. High-latitude spectrum "cut-off"	37
The spectrum in the very high energy range	44
Directional distribution of cosmic rays (degree of anisotropy)	50
CHAPTER II. COSMIC MAGNETIC BREMSSTRAHLUNG (SYNCHROTRON) RADIO EMISSION AND COSMIC RAYS IN THE UNIVERSE	53
4. Magnetic bremsstrahlung (synchrotron emission)	54
Emission of an individual electron	54
Stokes parameters	60

Emission of a system of particles	62
Intensity and polarisation of emission in the case of a mono-energetic and a power electron spectrum	64
Influence of the medium	72
5. Some radio astronomy data	80
Non-thermal radio emission of the Galaxy	80
Magnetic fields in the Galaxy	86
Discrete galactic sources—supernova shells	91
Extra-galactic sources. Radio galaxies	94
6. Cosmic rays in the Universe	97
Electron component of cosmic rays in the Galaxy	97
Radio emission of galactic disk and halo	101
Cosmic rays and magnetic fields in discrete sources	105
Values of W_{cr} and H for individual sources	109
CHAPTER III. MOTION OF COSMIC RAYS IN THE INTERSTELLAR MEDIUM	116
7. Energy losses and fragmentation of the nuclear component	117
Distribution of matter in the Galaxy and Metagalaxy	117
Absorption of cosmic rays by stars and interstellar dust	120
Ionisation losses	121
Braking of slow ions	123
Magnetic bremsstrahlung losses for protons and nuclei	126
Photonuclear reactions	127
Nuclear interactions	128
Fragmentation probabilities	131
Secondary electrons appearing in nuclear interactions	136
8. Energy losses for electrons	140
Ionisation and radiation losses	140
“Compton” energy losses	143
Magnetic bremsstrahlung losses	145
The part played by different types of losses for electrons moving in the Galaxy and Metagalaxy	146
9. Acceleration mechanisms and cosmic ray injection	151
Basic types of acceleration mechanisms	152
Regular electromagnetic acceleration	154
Statistical acceleration mechanisms	159
The injection problem	162
10. The nature of the motion of cosmic rays in the Galaxy	168
Motion of an individual particle in a given magnetic field	168
Diffusion in a given magnetic field (magnetic cloud model)	169
Nature of the motion of cosmic rays in the Galaxy. The diffusion approximation	171
Cosmic rays leaving the Galaxy	181
CHAPTER IV. THE ORIGIN OF COSMIC RAYS	186
11. Cosmic ray sources in the Galaxy and the galactic theory of the origin of cosmic rays	188

Cosmic ray distribution in the Galaxy (selection of a model)	189
Energy balance and requirements for sources	190
Various non-exploding stars as cosmic ray sources	192
Supernovae—the basic sources of cosmic rays in the Galaxy	194
The possible rôle of novae	200
Cosmic ray acceleration in interstellar space	202
The possible part played by explosions of the galactic core	207
The part played by cosmic rays formed at an early stage in the evolution of the Galaxy	214
Cosmic rays of solar origin	215
The origin of the electron component of cosmic rays	218
General remarks on the galactic theory	225
12. “Expanded” galactic theory of the origin of cosmic rays	227
Local Group of galaxies	227
The “expanded” Galactic model	228
General requirements for the “expanded” model	231
Conclusions	234
13. Cosmic rays of metagalactic origin	236
Some data from the field of extragalactic astronomy	237
Radio galaxies	242
Cosmological models	243
Metagalactic cosmic rays	250
Diffusion, energy losses and cosmic ray acceleration in the intergalactic medium	256
Estimates of the cosmic ray energy density in the Metagalaxy	262
The electron component	270
The nature of radio galaxies	274
General discussion and conclusions	277
 CHAPTER V. QUANTITATIVE GALACTIC THEORY OF THE ORIGIN OF COSMIC RAYS	 283
14. Equations describing the behaviour of cosmic rays in the interstellar medium	283
General transfer equations for cosmic rays	284
Transfer (fragmentation) equations for nuclei	288
Regular motion	292
General solution of the fragmentation equations for nuclei	294
General solution of the transfer equation for particles of one kind	296
15. Chemical composition of cosmic rays and its transformation in the interstellar medium	298
Models of cosmic ray propagation in the Galaxy	298
Cosmic ray composition in the sources	304
Discussion and conclusions	308
16. Energy spectrum and spatial distribution (anisotropy) of cosmic rays	320

Energy spectrum formation in the process of particle acceleration	321
The part played by fluctuating accelerations	324
The cosmic ray spectrum when the energies W_{cr} , W_H and W_{turb} in the sources are equal	326
Cosmic ray anisotropy	330
Energy spectrum, chemical composition and anisotropy in the very high energy region	333
17. The secondary electron component of cosmic rays and the general galactic radio emission spectrum	338
Secondary electron generation spectrum	340
Secondary electron distribution in the Galaxy and the magnetic bremsstrahlung intensity	345
Result of calculations and discussion of problem of origin of relativistic electrons in the galaxy	352
18. Gamma rays and magnetic bremsstrahlung X-radiation due to pion decay.	359
Gamma ray intensity	360
Intensity of secondary electron magnetic bremsstrahlung X-radiation	366
Calculation of the function $N(L)$ for a model of the Galaxy	370
Kinematics of $\pi \rightarrow \mu \rightarrow e$ decay	372
19. Gamma and X-radiation connected with galactic and metagalactic cosmic rays	373
Initial data	375
Galactic gamma radiation	378
Metagalactic emission	385
High-energy electrons and magnetic bremsstrahlung X-radiation	388
Effective cross section for "inverse" Compton scattering	390
CONCLUSION	394
APPENDIX 1. SOME CONSTANTS AND UNITS OF MEASUREMENT	398
APPENDIX 2. ASTROPHYSICAL QUANTITIES	399
APPENDIX 3. VALUES OF THE FUNCTIONS $F(x) = x \int_x^\infty K_{5/3}(\eta) d\eta$ AND $F_p(x) = xK_{2/3}(x)$	402
REFERENCES	403
SUBJECT INDEX	421
INDEX OF CELESTIAL OBJECTS	425
