

Contents

Chapter 1: Introduction	1
Mars	3
The Moon	4
Venus	4
The Outer Planets	5
Achievements in Planetology	6
Progress in Lunar Studies Since 1958	6
Summary	13
References	13
Chapter 2: Instruments Used for Compositional Exploration	14
Scientific Objectives	14
Chemical Analysis by Alpha Particle Back Scattering and Proton Spectroscopy	16
Principles	17
Proton Spectra from (α, p) Reactions	21
Data Interpretation	22
Instrumentation	22
Mission Description and Results (Surveyor V)	25
Surveyor VI	32
Results and Discussion of the Surveyor VI Alpha-scatter Experiment	32
Surveyor VII (see Franzgrote et al., 1968)	35
Results and Discussion	36
Lunar Surface Magnet Experiment	39
Magnet Assembly	39
Laboratory Studies	40
Surveyor V Mission	42
Discussion of the Surveyor V Results	42
Surveyor VI Magnet Experiment (see Negus de Wys, 1968)	43
Surveyor VII (see Negus de Wys, 1968)	44
Observations	44
Conclusions	46
Density Measurements of the Lunar Surface by Gamma Ray Scattering	47
Data Interpretation	49
Results	49

Gamma Ray Spectroscopy from Lunar Orbit	51
Instrumentation	51
Ranger 3 Results	54
Luna 10 Results	56
References	59
Chapter 3: Instruments and Techniques Under Development . . .	60
X-Ray Spectroscopy	60
JPL. Lunar X-Ray Spectrograph (see Metzger, 1964)	62
Specimen Requirements	64
Sample Conductivity	64
Sample Heating	65
Compactness and Surface Smoothness	65
Rock Analysis	65
Goddard Space Flight Center-Panametrics Spectrometer	67
Principles	67
Instrumentation	70
Data Analysis	71
X-Ray Diffraction Techniques for Lunar and Planetary Studies . .	75
Principles	75
Sampling and Sample Preparation	79
Data Handling and Interpretation	81
Orbital X-Ray Fluorescence Experiment (Adler et al., 1969)	81
Experimental Approach	82
Instrument Description	82
Orbital Analysis of Surface Composition by Gamma Ray Spectros- copy	84
Experiment Approach	85
Equipment Description	85
Future Direction	86
Orbital Analysis of Soil Composition by Infrared Techniques . . .	87
Principles	88
Goddard Space Flight Center Four Channel Radiometer (Hovis and Lowman, 1968)	92
Orbital Analysis of the Lunar Surface by Alpha Particle Spectros- copy	94
Scientific Description	94
Instrument Description	96
Neutron Methods	97
Experiment Configuration and Operation	98
Mass Spectroscopy for Lunar and Planetary Exploration	109
Mass Spectrometer for Atmospheric Gases (Spencer and Reber, 1962)	110

Results	112
Lunar Atmosphere Mass Spectrometer (Hoffman, 1969)	112
Instrumentation	113
Mass Spectrometer for the Analysis of Solids (Hertzog, 1965, Kreisman, 1969)	117
Results	123
Gas Chromatography	123
Combined Gas Chromatography—Mass Spectrometry	129
References	130
 Chapter 4: Apollo Surface Missions and the Lunar Receiving Labo- ratory Program	133
Landing Sites	134
Apollo Mission Profiles	135
Contamination Control	137
Lunar Receiving Laboratory (LRL)	139
Sample Flow Through the Lunar Receiving Laboratory (LRL)	151
Detailed Studies of Lunar Samples	157
Results of the Preliminary Examination of the Apollo 11 Lunar Samples	162
Geologic Description	163
Description of the Rocks	163
Mineralogy and Petrology	164
Chemical Analysis	166
Rare Gas Analysis	170
Preliminary Age Determinations	170
Gamma-Ray Measurements	172
Organic Analysis	172
Conclusions	172
References	174
 Chapter 5: Data Processing and Analysis	175
Introduction	175
Pulse Height and Digital Spectra	176
Measurement of Pulse Height Spectra	177
Formulation of the Least-Square Analysis Method	180
Calculation of Errors	189
Method of Solution Using Non-Negativity Constraint	191
Compensation for Gain-Shift and Zero-Drift	192
Preparation of the Library	194
Correlation and Resolution	196
Background Compensation	199
Application of Least-Square Techniques to Experimental Problems	201

On-Line Data Analysis	207
Summary	210
References	210
Chapter 6: Orbital and Surface Exploration Systems After Early	
Apollo	211
Introduction	211
General Considerations for Geochemical Exploration Missions	211
Orbital Missions	212
Critical Parameters for Lunar and Martian Investigations	213
Background Measurements	223
Methods for Dealing with Background Radiation	224
Expected Results from an Integrated Experiment	225
Interdependence of Measurements	225
Orbital Missions	227
Surface Missions	229
Surface Rovers	235
Soft and Hard Landing Probes	236
Planetary Exploration	237
References	239
Subject Index	241
