

## TABLE OF CONTENTS

PREFACE	VII
ACKNOWLEDGEMENTS	IX
LIST OF FREQUENTLY USED SYMBOLS	XVII
CHAPTER 1 / INTRODUCTION	1
1.1. Polar Upper Atmosphere and the Outer Magnetosphere	1
1.2. Polar Substorms and Magnetospheric Substorms	2
1.3. Magnetospheric Substorm and Magnetospheric Storm	5
1.4. Auroral Oval as a Natural Coordinate	7
1.5. Four Circumpolar Structures and the Corresponding Magnetospheric Structures	16
1.6. Changing Auroral Oval	18
1.7. Scope of the Monograph	20
CHAPTER 2 / AURORAL SUBSTORM AND ASSOCIATED MAGNETIC DISTURBANCES	22
2.1. Introduction: Typical Daily Variation	22
A. Auroral Substorm	22
B. Polar Magnetic Substorm	31
1. <i>SD</i> Analysis	31
2. Spiral Analysis	34
2.2. Auroral Substorm and Associated Magnetic Disturbances in the Mid-night Sector	36
2.3. Auroral Substorm and Associated Magnetic Disturbances in the Evening Sector	37
2.4. Auroral Substorm and Associated Magnetic Disturbances in the Morning Sector	44
2.5. Auroral Substorms in the Geomagnetically Conjugate Areas	45
CHAPTER 3 / POLAR MAGNETIC SUBSTORM	49
3.1. Introduction	49
3.2. Polar Magnetic Substorms on December 13, 1957	53

3.3.	Polar Magnetic Substorm on December 16, 1964	56
3.4.	Three-Dimensional Model Current System	62
3.5.	Polar Magnetic Substorms in Geomagnetically Conjugate Areas	68

#### CHAPTER 4 / IONOSPHERIC SUBSTORM 73

4.1.	Introduction	73
4.2.	Typical Daily Variation of the Cosmic Radio Wave Absorption	75
4.3.	Statistical Daily Variation Pattern	77
4.4.	N Type Absorption	80
4.5.	E Type Absorption	83
4.6.	M Type Absorption	91
4.7.	Cosmic Radio Noise Absorption at Geomagnetically Conjugate Areas	95
4.8.	Development of the Ionospheric Substorm (Absorption)	96
4.9.	Deformation of the Ionosphere	97
4.10.	Radio Auroras	100
4.11.	Atmospheric Wave Substorm	103
	A. Traveling Disturbances	103
	B. Infrasonic Pressure Waves from Active Auroras	103
4.12.	Atmospheric Heating in the Auroral Zone	106

#### CHAPTER 5 / X-RAY SUBSTORM 110

5.1.	Introduction	110
5.2.	Typical Daily Variation	111
5.3.	Statistical Daily Variation Pattern	114
5.4.	Midnight Bursts	114
5.5.	X-Ray Bursts Associated with Westward Traveling Surges	117
5.6.	X-Ray Bursts in the Morning and Midday Hours	120
5.7.	Fine Structures of the X-Ray Bursts	122
5.8.	X-Ray Bursts at the Geomagnetically Conjugate Areas	122
5.9.	Development of the X-Ray Substorm	122

#### CHAPTER 6 / PROTON AURORA SUBSTORM 126

6.1.	Introduction	126
6.2.	Typical Daily Variation	128
6.3.	Statistical Daily Variation Pattern	129
6.4.	Protons in the Auroral Bulge and Patches	132
6.5.	Protons and Westward Traveling Surges	133
6.6.	Development of the Proton Aurora Substorm	136

#### CHAPTER 7 / VLF EMISSION SUBSTORM 140

7.1.	Introduction	140
------	--------------	-----

7.2. Typical Daily Variation	142
7.3. Statistical Daily Variation Pattern	143
7.4. N1 Type Event and Westward Traveling Surges	146
7.5. N2 Type Event in the Midnight Sector	148
7.6. N3 and D Type Events	150
7.7. Development of the VLF Emission Substorm	151

#### CHAPTER 8 / MICROPULSATION SUBSTORM 155

8.1. Introduction	155
8.2. Typical Daily Variations	159
8.3. Statistical Daily Variation Pattern	160
A. Pi-2 Pulsations	160
B. Pulsations in High Latitudes	160
8.4. Micropulsations in the Auroral Bulge	162
8.5. Micropulsations and Positive Bays	165
8.6. Micropulsations and Pulsating Patches in the Morning Sector	167
8.7. Micropulsations in the Daytime (10–15 LT)	169
8.8. Micropulsations in the Afternoon Hours	171
8.9. Pi-2 Pulsations	171
8.10. Development of the Micropulsation Substorm: Figure 125	171

#### CHAPTER 9 / SATELLITE OBSERVATIONS DURING POLAR SUBSTORMS 174

9.1. Introduction	174
9.2. Magnetic Field and Particle Flux Variations at $r_e = 6.6a$ : Synchronous Satellite (ATS)	178
A. Magnetic Field	178
1. Midnight Sector	178
2. Evening Sector	179
3. Midmorning Sector	182
B. Electrons (50 keV)	182
C. Electrons (0.4–2 MeV)	184
9.3. Magnetic Field and Particle Flux Variations in the Range $r_e = 4a \sim 15a$	184
A. Magnetic Field	184
B. Particle Flux	186
9.4. Tail Region of the Magnetosphere: the VELA and IMP Satellites	194
A. Particle Flux	194
1. Low Energy Electrons	194
2. Electrons ( $>45$ keV)	194
3. Energetic Protons ( $>0.31$ MeV)	198
B. Magnetic Field	198
9.5. Trapping Region of the Magnetosphere ( $r_e < 6a$ )	198

A. Energetic Electrons	200
B. Protons (1 ~ 50 keV)	200
9.6. Observations by Low Altitude Satellites	202
A. Electrons ( $E \sim 10$ keV)	203
B. Electrons ( $E \sim 50$ keV)	203
C. Protons	205
D. Magnetic Field	205
9.7. Solar Wind and Polar Magnetic Substorms	207
A. Solar Wind Particles	207
B. Interplanetary Magnetic Field	207
C. Electric Field	209
CHAPTER 10 / MAGNETOSPHERIC SUBSTORM	
10.1. Introduction	212
10.2. Polar Substorm and the Distribution of the Particle Fluxes in the Polar Upper Atmosphere and in the Magnetosphere	212
A. Electron Fluxes over the Polar Region	212
B. Electron Fluxes in the Magnetosphere	215
C. Proton Flux in the Trapping Region	217
10.3. Polar Substorm and the Distribution of the Electric Fields in the Polar Upper Atmosphere and in the Magnetosphere	218
10.4. Review of Magnetospheric Substorm Theories	222
A. Basic Requirements	222
1. Total Energy dissipated During a Single Substorm	222
2. Initial Indication of the Substorm	223
3. Storage of the Substorm Energy	223
4. Explosive Phase and Recovery Phase	223
5. Asymmetric Proton Belt	224
B. Review of Theories of the Magnetospheric Substorm	224
1. Discharge from an Extra-Terrestrial Source	225
2. Diamagnetism	225
3. Polarization of the Radiation Belts	226
4. Dynamo Action	228
5. Convection	229
6. Neutral Point Discharge	232
7. Neutral Line Discharge	232
8. Electric Field Acceleration	233
9. Magnetospheric Tail Instability	236
10. Interchange Instability	242
10.5. Concluding Remarks	246

APPENDIX	255
Map of Alaska and the Location of the Alaskan Geophysical Observatories	257
All-Sky Camera Stations in the Northern Hemisphere	258
All-Sky Camera Stations in the Southern Hemisphere	259
List of Geomagnetic Observatories compiled by the World Data Center A	260
Time Comparison Table for College, Alaska	273
INDEX OF NAMES	275
INDEX OF SUBJECTS	279
