

## TABLE OF CONTENTS

<b>PREFACE</b>	<b>xi</b>
<b>CHAPTER I / SURVEY</b>	<b>1</b>
I.1. Experimental and Theoretical Approach to Plasma Physics	1
I.2. Plasma Phenomena in Laboratory and Space	4
I.2.1. Scaling Procedures	4
I.2.2. Simulation Experiments	5
I.2.3. Comparison Between Laboratory and Space Investigations	6
I.3. Field and Particle Aspects of Plasmas	6
I.4. Present State of the Classical Theory	8
I.5. Boundary Conditions. Circuit Dependence	9
I.6. Cosmology and the Origin of the Solar System	9
I.7. Aims of the Monograph	9
<b>CHAPTER II / ELECTRIC CURRENTS IN SPACE PLASMAS</b>	<b>11</b>
II.1. Dualism in Physics	11
II.2. Particle-Related Phenomena in Plasma Physics	12
II.3. Magnetic Field Lines	12
II.3.1. Magnetic Field and Electric Current Description of the Magnetosphere	13
II.3.2. Particle Motion in the Magnetosphere	15
II.3.3. Conclusions About ‘Field Line Reconnection’ and ‘Merging’ in the Stationary Magnetosphere	16
II.4. Filaments	16
II.4.1. Observations of Filaments	16
II.4.2. Constriction of a Discharge	21
II.4.3. Pinch Effect. The Bennett Relation	22
II.4.4. Filamentary Currents in Force-Free Magnetic Fields	23
II.4.5. Theory of Magnetic Ropes	25
II.4.6. Ion Pumps	26
II.4.7. Flux Ropes in the Ionosphere of Venus	26
II.5. Local Plasma Properties and the Circuit	26
II.5.1. Boundary Conditions	28
II.5.2. ‘Invisible’ Transfer of Energy	28
II.5.3. ‘Magnetic Merging’ Theories	29
II.6. Electric Double Layers	29
II.6.1. General Properties of Double Layers	29
II.6.2. Double Layers in the Magnetosphere	32
II.6.3. Energy Release in Double Layers	33

II.6.4. Exploding Double Layers	33
II.6.5. A Circuit with a Double Layer	34
II.7. Field-Aligned Currents as ‘Cables’	36
II.8. An Expanding Circuit	37
II.9. Different Types of Plasma Regions	37
II.9.1. ‘Passive’ Plasma Regions	37
II.9.2. ‘Active’ Plasma Regions	37
II.9.3. Plasma Cables	37
II.9.4. Ionospheric Projection of Active and Passive Plasma Regions	38
II.9.5. Boundary Current Sheets	39
II.10. Cellular Structure of Space	40
II.11. Fine Structure of Active Plasma Regions	40
 CHAPTER III / CIRCUITS	42
III.1. Importance of Electric Current Models	42
III.1.1. Particle Description	42
III.1.2. Different Types of Electric Currents	43
III.1.3. Transfer of Energy Between a Circuit and a Moving Plasma	44
III.2. The Auroral Circuits	48
III.3. Rotating Magnetized Body Surrounded by a Plasma	51
III.4. The Heliospheric Current System	53
III.4.1. The ‘Sector Structure’ and the Equatorial Current Layer	53
III.4.2. Construction of the Heliospheric Current Model	54
III.4.3. Properties of the Heliospheric Circuit	56
III.4.4. Extrapolation to Galactic Dimensions: Double Radio Sources	56
III.5. Circuits of Magnetospheric Tail, Comets, and Venus	59
III.5.1. Tail Circuit and Magnetic Substorms	59
III.5.2. Current System in Comets	60
III.5.3. Current System in the Magnetosphere of Venus	60
III.6. Magnetospheric Circuit	62
III.6.1. Zero Order Approximation: One-Particle Problem	62
III.6.2. First Order Approximation: Plasma Flux Small	62
III.6.3. The Three First-Approximation Circuits	65
III.6.4. Phenomena Produced by First Approximation Currents	67
III.6.5. Second Order Approximation. Realistic Plasma Flow	68
III.6.6. Magnetic Field Changes	68
III.6.7. Front (Shock Front) Circuit	68
III.6.8. Magnetopause Circuit	69
III.6.9. Solar Wind – Auroral Circuit	69
III.6.10. The Tail Circuit	70
III.6.11. Third Approximation and Comparison with Observation	70
III.6.12. The Three-Ring Model	71
III.7. Other Magnetospheres	73
III.8. Solar Prominence Circuit and Solar Flares	73
III.9. Solar Wind Acceleration	74
III.10. Transfer of Energy from the Solar Core to the Aurora	77

<b>CHAPTER IV / THEORY OF COSMIC PLASMAS</b>	<b>78</b>
IV.1. Classical Theory and Its Difficulties	78
IV.1.1. The Reverse Deflection	79
IV.2. Ionization	79
IV.2.1. Ionization by Light, by Particle Radiation, and by Electric Currents	79
IV.2.2. Transition Between a Plasma and a Neutral Gas	82
IV.3. Cosmic Abundances and Differentiation	82
IV.3.1. Cosmic Abundances	82
IV.3.2. Observations of Chemical Differentiation	83
IV.3.3. Separation Due to Different Ionization Potentials	84
IV.3.4. Separation Due to Mass Differences	84
IV.3.5. Separation Due to Different Vapor Pressures	84
IV.4. Turbulence	84
IV.5. Flux Amplification	86
IV.5.1. Production of Cosmic Magnetic Fields	86
IV.5.2. Self-Exciting Dynamos	87
IV.5.3. Theories of Self-Exciting Dynamos	87
IV.5.4. A Flux Amplification Mechanism	88
IV.5.5. Production of Cosmic Magnetic Fields by the Kink Instability	89
IV.6. Critical Velocity	91
IV.6.1. Prediction of the Critical Velocity in the Early Solar System	91
IV.6.2. Experimental Discovery	91
IV.6.3. Theory	92
IV.6.4. The Critical Velocity and Space Research	92
IV.7. Dusty Plasma	92
IV.7.1. Solid Particles as Part of a Plasma	93
IV.7.2. Electromagnetically and Gravitationally Controlled Motion of Solid Particles	93
IV.8. Formation and Evolution of Interstellar Clouds	93
IV.8.1. Three Special Cases	95
IV.8.2. Force-Free Magnetic Fields and the Production of Filaments	96
IV.8.3. Do Magnetic Fields Aid or Counteract a Compression?	96
IV.8.4. Pinch Compression of Dark Interstellar Clouds	97
IV.9. Ambiplasma	98
IV.9.1. Properties of an Ambiplasma	98
IV.9.2. The Annihilation Reactions	98
IV.9.3. Radiations from an Ambiplasma	100
IV.9.4. Main Ambiplasma Problems	102
IV.9.5. Separation of Matter and Antimatter	102
IV.9.6. On the Co-Existence of Matter and Antimatter	104
IV.10. High Energy Phenomena	104
IV.10.1. Sources of Energy and Acceleration Processes	105
IV.10.1.1. Varying Magnetic Fields	105
IV.10.1.2. Acceleration in Double Layers	105

IV.10.1.3. Annihilation	106
IV.10.1.4. Gravitation	106
IV.10.2. Magnetic Pumping	107
IV.10.3. Regions of Cosmic Ray Acceleration	108
IV.10.3.1. Heliospheric and Galactic Cosmic Radiation	108
IV.10.3.2. Origin of Galactic Cosmic Rays	109
<b>CHAPTER V / ORIGIN OF THE SOLAR SYSTEM</b>	<b>110</b>
V.1. How We Can Reconstruct Earlier Epochs	110
V.2. Sources of Information	110
V.3. Impact of Magnetospheric Results	111
V.3.1. Active and Passive Plasma Regions	111
V.3.2. Externally Driven Currents	111
V.4. Electromagnetic Effects Aiding the Formation and Contraction of Clouds	113
V.5. Chemical Differentiation in the Primeval Cloud	113
V.6. Intrinsically Produced Currents	114
V.7. Band Structure and the Critical Velocity	115
V.8. Solar System in Formation	118
V.8.1. Interstellar Clouds	118
V.8.2. Formation of Protostars	119
V.8.3. Planet-Satellite Formation	120
V.8.4. Observation of Solar Systems in Formation	121
V.9. Heterogeneity and the 'Heterogenic Principle'	122
<b>CHAPTER VI / COSMOLOGY</b>	<b>123</b>
VI.1. The State of Cosmology	123
VI.1.1. Historical Survey	123
VI.1.2. The Big Bang Hypothesis	125
VI.1.3. Homogeneous and Inhomogeneous Models	126
VI.1.3.1. Cellular Structure of Space	126
VI.1.3.2. Mass Distribution in the Universe	126
VI.1.3.3. Mass of the Metagalaxy and the Schwarzschild Limit	128
VI.1.4. The Hubble Expansion	129
VI.1.4.1. The Hubble Parameter	129
VI.1.4.2. Euclidean Model of the Evolution of the Metagalaxy	131
VI.2. Coexistence of Matter and Antimatter	131
VI.2.1. Matter-Antimatter Symmetry	131
VI.2.2. Matter and Antimatter Cells	132
VI.2.3. Size of Cells: Galactic or Smaller?	133
VI.2.4. Structure of a Symmetric Galaxy	134
VI.2.4.1. Solar System	134
VI.2.4.2. Cometary Reservoir	135
VI.2.5. Objections to the Existence of Antimatter	136
VI.3. Annihilation as a Source of Energy	137

## TABLE OF CONTENTS

ix

VI.3.1.	Argument for the Existence of Antimatter		137
VI.3.2.	Similarity of Electromagnetic Radiation from the Two Kinds of Matter		138
VI.3.3.	Radiation from Annihilation Processes		138
VI.3.4.	Leidenfrost Layers and Annihilation at the Cell Walls		138
VI.3.5.	Annihilation in Cosmic Clouds		139
VI.3.6.	Bodies Falling into a Star of Opposite Kind of Matter		139
VI.3.7.	Model of an Ambistar		141
VI.3.7.1.	Ambistar Model I		141
VI.3.7.2.	Stellar Collisions		143
VI.3.7.3.	Ambistar Model II		143
VI.3.7.4.	Observable Properties of an Ambistar		144
VI.3.7.5.	Blueshifts		144
VI.3.7.6.	QSO Scenario		144
VI.3.7.7.	Continuous X-Ray Background Radiation		146
VI.4.	Hubble Expansion in a Euclidean Space		146
VI.4.1.	Non-Cosmological Redshifts of Some QSOs		146
VI.4.2.	Consequences of Non-Cosmological Interpretation of QSO Redshifts		147
VI.5.	A Model for the Evolution of the Metagalaxy		148
VI.5.1.	The Proto-Metagalaxy		148
VI.5.2.	The Kinetic Energy of the Hubble Expansion		149
VI.5.3.	Formation of the Proto-Metagalaxy		149
VI.5.4.	Other Cosmological Problems		150
VI.6.	Other Metagalaxies		151
VI.7.	Discussion		151
VI.8.	Conclusions		152
