

CONTENTS

INTRODUCTION.....	3
CHAPTER I. PROPERTIES AND PARAMETERS OF THE NEAR-EARTH AND INTERPLANETARY PLASMA. BASIC EQUATIONS.....	7
§1. General Remarks.....	7
§2. Basic Parameters of the Near-Earth and Interplanetary Plasma.....	11
§3. Basic Equations and Properties of the Plasma.....	12
§4. Refractive Indices and Resonances of a Cold Plasma ($T = 0$). Classification of Waves.....	21
§5. Some Forms of Resonances with Allowance for Spatial Dispersion ($T \neq 0$, $T_e \gg T_i$)	34
1. Langmuir Waves.....	34
2. Electron-Acoustic Waves.....	35
3. Ion-Acoustic Waves.....	37
4. Electron and Ion Gyroresonances.....	40
§6. Some Remarks on the Conditions on the Surfaces of Bodies Moving in the Plasma.....	41
1. Reflection of Particles.....	43
2. "Creation" of Particles.....	44
3. Potential of the Body.....	45
§7. Group Velocity.....	47
1. High-Frequency Waves.....	49
2. Low-Frequency Waves.....	49
3. VLF and ELF Waves.....	50
4. Langmuir and Magnetoacoustic Waves.....	51
CHAPTER II. PLASMA FLOW AROUND MOVING BODIES.....	53
§8. Brief Characterization of the Solved Theoretical Problems and Some Experiments.....	53

§9. Perturbation of the Plasma in the Neighborhood of Rapidly Moving Bodies	
($V_0 \gg v_i$)	56
1. Neutral Approximation.....	56
2. Influence of the Geomagnetic Field.....	63
3. Influence of the Electric Field.....	66
4. Near Zone: Large Body ($\rho_0 \gg D$; $r < \rho_0 V_0 / v_i$); and Small Body ($\rho_0 \ll D$; $r \leq DV_0 / v_i$, $r \ll DV_0 / v_i$)	68
5. Far Zone ($r \gg \rho_0 V_0 / v_i$)	78
§10. Perturbation of the Plasma in the Neighborhood of Bodies in a State of Quasi-rest ($V_0 \lesssim v_i$)	89
1. Small Body at Rest ($\rho_0 \ll D$, $V_0 = 0$)	90
2. Large Body at Rest ($\rho_0 \gg D$, $V_0 = 0$)	94
3. Slowly Moving Bodies ($V_0 \sim v_i$, $V_0 < v_i$, or $V_0 > v_i$; $\rho_0 \ll D$ and $\rho_0 \gg D$)	96
§11. Scattering of Radio Waves on the Wake of a Rapidly Moving Body.....	103
§12. Some Remarks on the Excitation of Waves and the Instability of the Plasma in the Neighborhood of a Rapidly Moving Body.....	115
1. Relationship between the Perturbation $\delta N(r)$ of the Electron Density of the Wake of a Body and Ion-Acoustic Waves.....	117
2. Interaction of Incident Electromagnetic Waves with the Wake of the Body.....	118
3. Emission of the Wake of a Body and its Instabilities.....	121
 CHAPTER III: WAVES AND OSCILLATIONS IN THE IONOSPHERE AND THE NEAR-EARTH PLASMA.....	125
§13. Brief Characterization of Results of Different Experiments.....	125
§14. Results of Investigations of ELF Waves ($0 < \omega \leq \Omega_H(H^+)$).....	130
1. Hydromagnetic Whistlers.....	130
2. Ion Cyclotron Whistlers.....	134
3. ELF Hiss and Chorus. Cutoff and Amplification of ELF Waves as $n \rightarrow 0$ between the Proton and Helium Gyrofrequencies.....	138
§15. Results of Investigations of VLF Waves ($\Omega_H(H^+) \leq \omega \leq \omega_L$).....	148
1. Emission of Proton Gyrofrequency Harmonics. Emission Spectra Cut Off at the Proton Gyrofrequency.....	149
2. Ion-Acoustic Waves.....	150

3. Excitation of Waves at the Lower Hybrid Frequency ω_L	154
4. VLF Hiss. Saucer-Shaped Emission.....	158
5. Capture of Waves in the Ionosphere and Magnetosphere (Subprotonospheric, Magnetospheric-Reflected (MR) and v Whistlers).....	160
§16. Results of Investigations of LF Waves ($\omega_L < \omega \lesssim \omega_H$).....	166
1. Electron Whistlers.....	167
2. LF Chorus, Hiss and Other Emissions Generated near the Geomagnetic Equator.....	170
§17. Results of Investigations of HF Waves ($\omega > \omega_H$).....	175
1. HF Resonances Observed in the Topside Ionosphere.....	175
2. HF Waves in the Near Magnetosphere and in the Solar Wind.....	178
§18. Energy Densities of Different Types of Waves.....	185
Bibliography.....	189
