<i>Preface</i>	ix
PART 1. FLOW AROUND BODIES MOVING IN A PLASMA	
<b>9 A brief description of some theoretical problems and experiments</b>	<b>3</b>
<b>10 Some remarks about conditions at the boundaries of bodies moving in a plasma</b>	<b>10</b>
10.1 Reflection of particles	11
10.2 Production of particles	12
10.3 Potential of a body	13
10.4 Electron temperature around a body	16
<b>11 Disturbances of the plasma near fast-moving bodies (<math>V_b \gg v_i</math>)</b>	<b>19</b>
11.1 Neutral approximation	19
11.2 Effect of an external static magnetic field	26
11.3 Effect of an electric field	29
<b>12 Disturbances of the plasma near quasi-stationary bodies (<math>V_b \lesssim v_i</math>)</b>	<b>62</b>
12.1 A small stationary body ( $\rho_b \ll D_e, V_b = 0$ )	62
12.2 A large stationary body ( $\rho_b \gg D_e, V_b = 0$ )	66
12.3 Slowly moving bodies ( $V_b \simeq, <, \text{ or } \ll v_i; \rho_b \ll D_e \text{ or } \rho_b \gg D_e$ )	69
<b>13 Scattering of radio waves in the wake of a fast-moving body</b>	<b>75</b>
<b>14 Some remarks about the excitation of waves and plasma instability near a fast-moving body</b>	<b>87</b>
14.1 The relationship between the perturbation of the electron density $\delta N_e(r)$ in the wake and ion-acoustic waves	88
14.2 The interaction between incident electromagnetic waves and the wake	89
14.3 Emission from the wake and plasma instability	91

PART 2. WAVES AND OSCILLATIONS IN THE NEAR-EARTH AND  
INTERPLANETARY PLASMA

<b>15</b>	<b>Introductory remarks</b>	<b>95</b>
	15.1 A general outline of the results of various experiments	96
	15.2 Classification of the observed wave processes	98
	15.3 Generation mechanisms for waves of different types	99
 <b>16</b>	 <b>Results of studies of ELF waves</b>	 <b>103</b>
	16.1 Hydromagnetic whistlers	103
	16.2 Hydromagnetic waves (pulsations of the magnetic field) in the magnetosphere	108
	16.3 Ion-cyclotron whistlers and waves	110
	16.4 Hiss and chorus ELF radiation. Cutoff and intensification of emission as $n^2 \rightarrow 0$	116
 <b>17</b>	 <b>Results of studies of VLF waves</b>	 <b>123</b>
	17.1 Ion-acoustic waves; radiation at the proton gyrofrequency and its harmonics	123
	17.2 Noise-like waves generated in the frequency range $\Omega_H < \omega < \omega_L$ . Plasmaspheric hiss (PH)	133
	17.3 Waves generated near the lower-hybrid frequency $\omega_L$	138
	17.4 Auroral hiss (AH). Saucer-shaped and V-shaped emissions	142
	17.5 Trapping of VLF waves in the ionosphere and in the magnetosphere. Non-ducted waves	149
	17.6 Broad-band emission of VLF waves. 'Lion's roar' LF waves	154
 <b>18</b>	 <b>Results of studies of LF waves</b>	 <b>159</b>
	18.1 Whistling atmospherics	159
	18.2 Emissions generated at the boundary of the plasmasphere by means of radio waves (artificially stimulated emissions, ASE). Intensification of radio waves in the whistler mode	162
	18.3 Hiss and chorus low-frequency waves	169
 <b>19</b>	 <b>Results of studies of HF waves (<math>\omega \gtrsim \omega_H</math>, <math>\omega \gtrsim \omega_0</math>)</b>	 <b>178</b>
	19.1 Resonances in the outer ionosphere (plasmasphere)	179
	19.2 Waves in the magnetosphere, in the interplanetary medium, and in the solar wind	187
 <b>20</b>	 <b>Energy densities of various types of waves</b>	 <b>216</b>
