

## TABLE OF CONTENTS

PREFACE . . . . .	ix
Chapter 1: TYPES OF GASEOUS NEBULAE . . . . .	1
EXAMPLES OF GASEOUS NEBULAE . . . . .	4
HII Regions or Diffuse Nebulae . . . . .	4
Planetary Nebulae . . . . .	4
Supernova Remnants . . . . .	8
The 30 Doradus Nebular Complex . . . . .	11
Nonspatially Resolvable Objects, Galaxies and Stars . . . . .	12
Combination Variables and Other Exotic Objects . . . . .	15
A Concise List of References . . . . .	16
List of Illustrations . . . . .	17
Chapter 2: SPECTRA OF GASEOUS NEBULAE . . . . .	18
2A. The Primary Mechanism . . . . .	18
2B. Collisionally-Excited Lines . . . . .	29
2C. Permitted Lines in the Optical Region . . . . .	35
Some Suggested References . . . . .	36
List of Illustrations . . . . .	36
Chapter 3: RADIATIVE EXCITATION, IONIZATION, RECOMBINATION, AND FLUORESCENCE . . . . .	39
3A. Basic Relationships . . . . .	39
3B. The Strömgren Sphere . . . . .	46
3C. Free-Free Emission and Bremsstrahlung . . . . .	50
3D. Ionization Equation for Complex Atoms . . . . .	51
3E. Dielectronic Recombination . . . . .	53
3F. Collisional Ionization . . . . .	62
3G. Charge Exchange . . . . .	62
3H. Stellar Far Ultraviolet Radiation Fields . . . . .	63
3I. Line Excitation . . . . .	66
Problems . . . . .	68
Selected Bibliography . . . . .	71
List of Illustrations . . . . .	72
Chapter 4: LINE AND CONTINUOUS SPECTRA OF HYDROGEN AND HELIUM . .	73
4A. Statistical Equilibrium, the Elementary Theory of the Balmer Decrement . . . . .	73
4B. Improved Balmer Decrement Theory . . . . .	76
4C. The Observed Balmer Decrement . . . . .	88
4D. The Line and Continuous Spectrum of Hydrogen in the Radio-Frequency Region . . . . .	89

4E. The Optical Continuum . . . . .	98
4F. Hydrogen Plasmas at Moderately High Densities and Optical Thicknesses . . . . .	106
Problems . . . . .	109
References . . . . .	110
List of Illustrations . . . . .	112
 Chapter 5: COLLISIONALLY EXCITED LINES AND PLASMA DIAGNOSTICS . .	115
5A (i). Collisional Excitation of Hydrogen Lines . . . . .	115
5A (ii). Collisional Excitation of Lines of Heavier Elements .	116
5A (iii). Transition Probabilities for Magnetic Dipole and Electric Quadrupole Transitions; a Quantum Mechanical Digression . . . . .	119
5B (i). General Principles . . . . .	120
5B (ii). Comments on Calculation of Collision Strengths . .	122
5C (i). "Low Density" Domain for $p^2$ and $p^4$ Configurations .	128
5D (i). Collisionally-Excited Lines in the Near-Ultraviolet Region . . . . .	129
5D (ii). Infrared Transitions . . . . .	130
5D (iii). Ionic Concentrations for $p^3$ Configurations . . . .	130
5E (i). Collisionally-Excited Lines as Tools for Plasma Diagnostics; Electron Temperatures . . . . .	133
5E (ii). Collisionally-Excited Lines as Tools for Nebular Diagnostics; Electron Densities . . . . .	134
5E (iii). Line Ratios That Depend on Both Temperature and Density . . . . .	139
5F. Observational Checks on Accuracy of Theoretical Parameters . . . . .	142
Problems . . . . .	146
References . . . . .	147
List of Illustrations . . . . .	150
 Chapter 6: RADIATIVE EQUILIBRIUM OF A GASEOUS NEBULA . . . . .	153
6A. The Energy Balance of a Gaseous Nebula . . . . .	153
6B. Persistence of a Maxwellian Velocity Distribution in a Photoionized Nebula . . . . .	160
Problem . . . . .	164
References . . . . .	165
List of Illustrations . . . . .	165
 Chapter 7: NEBULAR MODELS . . . . .	167
7A. Initial Assumptions . . . . .	167
7B. Computational Procedures . . . . .	168
7C. Dependence of Models on Input Parameters . . . . .	172
7D. Some Complicating and Troublesome Factors for Nebular Model Constructions . . . . .	173
7E. Time-Dependent Models . . . . .	175
7F. Resonance Transitions and Transfer Problems . . . . .	178
7G. Non-Radiative Excitation . . . . .	180

Problems . . . . .	182
References . . . . .	183
List of Illustrations . . . . .	185
 Chapter 8: DUST AND RELATED PHENOMENA IN GASEOUS NEBULAE . . . . .	187
8A. Extinction Effects Produced by Dust . . . . .	187
8B. Dust and Infrared Spectra of Gaseous Nebulae . . . . .	193
8C. Temperature and Energy Balance of the Dust . . . . .	196
8D. Optical and Near UV Observations of Diffuse Nebulae . . . . .	199
8E. Further Properties of Interstellar Dust Grains . . . . .	201
(1) Dust/Gas Ratio . . . . .	201
(2) Depletion of Refractory Elements in the Interstellar Medium . . . . .	201
(3) Linear Polarization . . . . .	202
(4) Variation of the Ratio $R = A_V/E(B-V)$ . . . . .	202
(5) Are the Interstellar Media of Other Galaxies Similar to those of Our Own? . . . . .	202
References . . . . .	203
List of Illustrations . . . . .	206
 Chapter 9: SHOCK WAVES . . . . .	207
9A. Introduction . . . . .	207
9B. The Structure of Shocks . . . . .	208
9C. Intricacies and Complexities of Some Astrophysical Shock Phenomena . . . . .	213
9D. Post-Shock Cooling Processes . . . . .	214
9E. Radiative Transfer Effects . . . . .	215
9F. Collisionless and Nonradiative Shocks . . . . .	215
9G. Theoretical Models for Shock-Excited Nebulae . . . . .	215
9H. Interpretation of Optical Spectra . . . . .	218
Problem . . . . .	220
References . . . . .	220
List of Illustrations . . . . .	221
 Chapter 10: DIFFUSE NEBULAE, WIND-BLOWN SHELLS AND PLANETARIES . . . . .	222
10A. Introduction . . . . .	222
10B. Some Brief Comments on Molecular Clouds . . . . .	224
10C. Relations Between H II Regions and Exciting Stars . . . . .	224
10C1. Some Basic Considerations . . . . .	224
10C2. The Orion Nebula . . . . .	228
10C3. Sharpless 155 and a Nearby Cepheus Association .	231
10D. Wind-Driven Shells and the Interstellar Medium . . . . .	233
10D1. Some Theoretical Considerations . . . . .	233
10D2. The Gum Nebula . . . . .	237
10D3. 30 Doradus and NGC 604 . . . . .	237
10E. Planetary Nebulae . . . . .	239
10E1. The Problem of Distances . . . . .	239
10E2. Some Statistics of Planetary Nebulae . . . . .	242
10E3. Structures and Internal Motions of Planetary Nebulae . . . . .	243

10F. Bipolar Nebulae: Transition Objects or Young Planetaries	248
References	249
List of Illustrations	253
Chapter 11: CHEMICAL COMPOSITIONS OF GASEOUS NEBULAE	255
11A. Introduction	255
11B. Observational and Theoretical Problems of Composition Determination: Diffuse Nebulae	256
11C. Problems of Chemical Composition Determinations: Planetary Nebulae	257
11D. Examples of Abundance Determinations	259
11E. Compositions of Planetary Nebulae	262
11F. Planetary Nebular Compositions and Galactic Structure	263
11G. Abundance Determinations in H II Regions and Composition Gradients in Galaxies	269
11H. Abundance Gradients in the Disk of Our Galaxy	275
References	286
List of Illustrations	289
Chapter 12: NEBULAR COMPOSITIONS, ELEMENT BUILDING, AND STELLAR EVOLUTION	291
12A. Stellar Winds	292
12B. Late Stages of Stellar Evolution for Objects of Low-to-Intermediate Mass	293
12C. Origin of Planetary Nebulae; Some Theoretical Insights and Observational Clues	297
12D. Carbon Stars and Their Relationship to Planetary Nebulae	299
12E. Comparison of Theory and Observations	299
12F. Notes on the Evolution of Very Massive Stars	304
12G. The Role of the Wolf-Rayet Stars	305
12H. Supernovae	306
12I. Principal Sources of Enrichment to the H II Regions	307
12J. H II Regions and the Chemical Evolution of Galaxies	309
References	311
List of Illustrations	313
Appendix: Compilation of Transition Probabilities, Electron Excitation Rate Coefficients and Photoionization Cross sections	315
1. Indices	315
2. Methods	315
3. Accuracy	315
4. Transition Probabilities and Excitation Rate Coefficients	316
References	331
References to Individual Nebulae	335
Index of Principal Symbols Used	339
Subject Index	343
