

CONTENTS

Preface	1
Chapter I. THE STRUCTURE OF THE IONOSPHERE AND RADIO METHODS OF INVESTIGATION	3
§1. Ionograms	3
1.1. Pulse Methods	5
1.2. Refractive Index for Frequencies $\omega \gg \Omega_H, \Omega_0$; Group Velocity	7
1.3. Interpretation of Ionograms	19
1.4. The Regularly Stratified Model of the Ionosphere	27
1.5. Complex Ionograms; Sporadic Layers	28
1.6. Multiply Reflected Signals and the Perturbed Structure of the Ionosphere	32
§2. Radio Studies of the Ionosphere with Rockets and Satellites	39
2.1. Topside Sounding of the Outer Ionosphere	39
2.2. General Formulation for the Refractive Index	47
2.3. The Phase (Doppler) Method of Measurement	61
2.4. Some Experimental Results	71
§3. Low-Frequency and Very-Low Frequency Waves in the Ionosphere	78
3.1. The Refractive Index, with Allowance for the Influence of Ions	79
3.2. The Group Velocity of LF, VLF, and ELF Waves	90
3.3. Some Experimental Results and Methods of Analysis	93
§4. Incoherent Scattering of Radio Waves in the Ionosphere	116
4.1. Principal Theoretical Results	121
4.2. Some Experimental Results and Methods of Analysis	126
§5. Fine Structure of the Ionosphere	132
5.1. Statistical Character of the Reflection of Radio Waves from the Ionosphere	133
5.2. Energy Spectrum of a Beam of Scattered Waves	140
5.3. Time Correlation of Signal Amplitudes; Velocities of Random Motion	143
5.4. Spatial Correlation Coefficient; Angular Spectrum of a Beam of Waves and the Size of the Irregularities	147
5.5. Expansion of Irregularities by Diffusion	149
5.6. Turbidity of the Ionosphere and Electron-Density Fluctuations	157
5.7. Summary of Experimental Evidence on the Fine Structure of the Ionosphere	168

§6. Drift of Ionized Formations; Winds in the Ionosphere	174
6.1. Some Methods of Determining the Drift Velocity	175
6.2. Some Measurements of the Drift Velocity V	181
6.3. Some Remarks on the Mechanisms Responsible for the Ionospheric Irregularities	186
Chapter II. THE FORMATION OF THE IONOSPHERE	192
§7. Structure of the Upper Atmosphere	193
7.1. The Composition and Density of the Atmosphere	193
7.2. Height Distribution of the Temperature and Electron Concentration . . .	202
§8. Ionization Balance in the Ionosphere	210
8.1. Photoionization	210
8.2. Inelastic Collision Processes between Charged Particles	220
8.3. Ionization-Balance Equations	225
8.4. Some Reaction-Rate Determinations	231
§9. The Chapman-Layer Theory	236
Chapter III. MORPHOLOGY OF THE IONOSPHERE: REGULAR VARIATIONS IN THE ELECTRON CONCENTRATION	243
§10. Basic Regularities of the D Region	244
10.1. The Method of Partial Reflection of Radio Waves from the Base of the Ionosphere	244
10.2. Gyroresonance Interaction of Radio Waves	246
10.3. Height Distributions $N(z)$ in the Lower Ionosphere	248
10.4. Seasonal and Latitude Variations in the D Region	250
§11. Determination of the Electron-Concentration Profile $N(z)$ in the E and F Regions from Ionograms	253
11.1. General Method for Calculating $N(z)$, Including the Geomagnetic Field	254
11.2. Some Determinations of $N(z)$ Profiles	267
§12. Diurnal and Seasonal Variations in the E and F Regions	269
§13. Latitude and Longitude Variations in the E and F Regions	284
§14. Some Properties of the Outer Ionosphere	296
§15. Basic Properties of the Sporadic-E Layer	304
§16. The Influence of the 11-Year Solar Activity Cycle	311
§17. Investigation of the Ionosphere during Solar Eclipses	319
17.1. Analysis of the Ionization-Balance Equation	320
17.2. The Chapman-Layer Case	323
17.3. Some Observational Results	324
§18. Meteors and their Influence on the Ionization of the E Region	327
§19. Tides in the Ionosphere	330
§20. Meteorological Phenomena and their Connection with the State of the Ionosphere	334

Chapter IV. ABSORPTION OF ELECTROMAGNETIC WAVES IN THE IONOSPHERE (REFLECTION OF RADIO WAVES)	337
§21. The Reflection Coefficient of the Ionosphere	337
21.1. Generalized Refractive Index and Damping Coefficient; Influence of the Electric Field	338
21.2. Reflection from Different Types of Layers	344
21.3. Spreading of Pulses in the Ionosphere	351
21.4. Influence of a Strong Electric Field on the Electron Temperature and the Collision Frequency	353
§22. Reflection in the Geometrical-Optics Approximation	356
22.1. Deflecting and Nondeflecting Regions	357
22.2. Chapman-Layer Absorption	359
§23. Influence of Scattering by Irregularities on the Reflection Coefficient	360
23.1. Calculation of the Field Amplitude Produced by an Isolated Irregularity	361
23.2. Statistical Structure of the Reflected-Wave Field	365
23.3. Radiation of Electrons in the Ionosphere	367
§24. Experimental Results	370
24.1. Radio Techniques	370
24.2. Investigations of the Reflection Coefficient	375
24.3. Height Dependence of the Collision Frequency	379
Chapter V. IRREGULAR PHENOMENA IN THE IONOSPHERE	381
§25. General Properties of the Main Types of Disturbances in the Ionosphere	381
§26. Ionospheric Storms; Disturbances of the F ₂ Region	385
§27. Sudden Ionospheric Disturbances (SID)	391
§28. Anomalous Absorption in the Auroral Zone (AA) and the Polar Cap (PCA)	397
