

CONTENTS

Chapter I: Introduction	1
1. Data on the Properties of the Upper Ionosphere	1
2. Properties of the Interaction of Moving Bodies with the Ionosphere	5
3. Basic Equations	8
Chapter II: Disturbance of the Concentration of Particles, without Taking into Account the Influence of Electric and Magnetic Fields	16
4. Qualitative Examination of the Disturbances Produced by a Rapidly Moving Body	16
5. Rarefaction Region Behind a Rapidly Moving Body of Arbitrary Shape	20
6. Region of Compression Ahead of a Rapidly Moving Sphere	26
7. The Concentration of Particles Around a Sphere Moving with Arbitrary Velocity	33
8. Fourier Components of the Disturbances of the Concentration of Particles for a Rapidly Moving Sphere	43
Chapter III: Influence of a Constant Magnetic Field on the Disturbance of the Ion and Electron Concentrations	47
9. Distribution Function of the Ions	47
10. Motion of Body Along the Magnetic Field	49
11. Motion of Body Transverse to the Magnetic Field	52
12. Arbitrary Direction of Motion	58
13. Fourier Components of the Electron Concentration	59
Chapter IV: Electric Field Around a Body	63
14. Approximate Calculation of the Electric Field	63
15. Influence of an Electric Field on the Motion of Ions	76
16. General Properties of the Equations Which Take Account of an Electric Field	83
17. Disturbances in the Vicinity of a Point Body	90
18. Disturbances of a Plasma by a High-Frequency Electric Field	93
Chapter V: Consideration of the Influence of Collisions Between Particles on the Disturbance of the Concentrations of Electrons and Ions	106
19. Effective Number of Collisions	106
20. Simplification of the Equation Containing a Collision Integral of General Form	108
21. Solution of the Equations Containing the Exact Collision Integrals in Various Limiting Cases	112
22. Disturbances of the Concentration of Electrons and Ions in the Diffusion Approximation (Lower Ionosphere)	115

Chapter VI: Disturbance of the Magnetic Field	122
23. Calculation of the Disturbance of a Magnetic Field	122
24. Influence of Disturbances of the Magnetic Field on the Motion of Ions and Electrons	128
Chapter VII: Scattering of Electromagnetic Waves by the "Trail" of a Rapidly Moving Body	131
25. Effective Cross Section for the Scattering in the Approximation of Perturbation Theory	131
26. The Scattering Function	133
27. Dependence of the Effective Scattering Cross Section on Altitude and on Wavelength	141
28. Character of the Field of the Scattered Wave at the Point of Observation	152
29. Effective Scattering Cross Section in the Absence of an External Magnetic Field	155
30. Scattering by the Trail of a Body Moving in the Lower Ionosphere	157
Chapter VIII: Distribution of Particles in a Central Force Field	159
31. Introductory Remarks	159
32. Properties of the Motion of Particles in a Central Force Field	161
33. Solution of the Kinetic Equation	167
34. Concentration of Particles in the Vicinity of a Body at Rest	171
35. Distribution of the Particles Performing Bounded Motion	178
Chapter IX: Disturbance of the Plasma and the Electric Field in the Vicinity of a Charged Body at Rest	186
36. Basic Equations	186
37. Electric Field and Structure of the Plasma in the Vicinity of a Large Body	187
38. Double Layer Around the Surface of a Large Body	198
39. Structure of the Plasma and the Electric Field for a Very High Potential on the Surface of a Large Body	204
40. Electric Field and Structure of the Plasma in the Vicinity of a Small Body	211
41. Structure of the Disturbed Region in the Vicinity of a Perfectly Reflecting Body	219
Chapter X: Particle Flux in the Vicinity of the Body	221
42. Introductory Remarks	221
43. Flux of Neutral Particles	222
44. Flux of Electrons and Ions in the Vicinity of an Absorbing Body	228
45. Theory of a Spherical Probe	231
Literature Cited	238
