<b>• 1 Invited review</b>	
<b>Visual and ultraviolet observations of interstellar dust</b>	<b>1</b>
<i>A.N. Witt</i>	
1.1 Introduction	1
1.2 Interstellar extinction	2
1.3 Scattering	4
1.4 Dust luminescence	9
1.5 Summary and prospects	11
<b>2 Interstellar circular polarization and the dielectric nature of grains</b>	<b>15</b>
<i>G. Chlewicki and J.M. Greenberg</i>	
2.1 Introduction	15
2.2 Circular polarization criterion	15
2.3 Kramers-Kronig interpretation of interstellar polarization	16
<b>3 How anomalous is the interstellar extinction in NGC 3372, the Carina Nebula?</b>	<b>19</b>
<i>M. Tapia, M. Roth, H. Marraco and M.T. Ruiz</i>	
3.1 Introduction	19
3.2 Observations and results	20
3.3 Discussion	21
3.4 Conclusions	23
<b>• 4 Invited review</b>	
<b>The observed properties of interstellar dust in the infrared</b>	<b>25</b>
<i>D.C.B. Whittet</i>	
4.1 Introduction	25
4.2 Interstellar extinction	26
4.3 Dust-related absorption features	30
4.4 Infrared continuum emission	38
4.5 Dust-related emission features	43
4.6 Overview	46

<b>5</b>	<b>The detection of solid methanol in W 33A</b>	<b>55</b>
	<i>F. Baas, R.J.A. Grim, T.R. Geballe, W. Schutte and J.M. Greenberg</i>	
5.1	Introduction	55
5.2	Observational results	55
5.3	The CH <sub>3</sub> OH and H <sub>2</sub> CO column densities	56
5.4	CH <sub>3</sub> OH formation	58
5.5	Conclusions	59
<b>6</b>	<b>Infrared spectroscopy of dust in the Taurus dark clouds: a case study</b>	<b>61</b>
	<i>A.J. Adamson, D.C.B. Whittet, M.F. Bode, A.J. Longmore, P.F. Roche, A.D. McFadzean, T.R. Geballe and D.K. Aitken</i>	
6.1	Introduction	61
6.2	The programme	61
6.3	Correlations	62
6.4	Discussion	63
<b>7</b>	<b>Spatial variations of the 3 <math>\mu</math>m emission features within Orion's Bar</b>	<b>67</b>
	<i>A. Moorhouse, T.R. Geballe, L.J. Allamandola, A.G.G.M. Tielens and P.W.J.L. Brand</i>	
7.1	Observations	67
7.2	Interpretation	67
7.3	Conclusions	69
<b>• 8</b>	<b>Invited review</b>	
	<b>Observations and modelling of circumstellar dust</b>	<b>73</b>
	<i>M.F. Bode</i>	
8.1	Introduction	73
8.2	Evidence of circumstellar dust	75
8.3	Optically thick dust shell models	85
8.4	Sites of episodic grain formation	89
8.5	The circumstellar-interstellar connection	93
8.6	Conclusions and suggestions for future work	96
<b>9</b>	<b>Circumstellar dust emission</b>	<b>103</b>
	<i>C.J. Skinner and B. Whitmore</i>	
9.1	Model parameters	103
9.2	Results	104
9.3	Conclusions	106

<b>10 The dust content of nebulae</b>	<b>107</b>
<i>M.G. Hoare, W.M. Glencross, P.F. Roche and R.E.S. Clegg</i>	
10.1 Introduction	107
10.2 The grain models used	107
10.3 Dust in the ionized region	107
10.4 Dust in the neutral region	108
10.5 Conclusions	111
<b>11 Comets in star-forming regions</b>	<b>113</b>
<i>M.E. Bailey</i>	
11.1 Introduction	113
11.2 Estimates of the cometary mass fraction	114
11.3 The lifetime of cometary nuclei	115
11.4 Some effects of cometary decay	116
11.5 Conclusions	118
<b>• 12 Invited review</b>	
<b>The interstellar dust model of comets: post Halley</b>	<b>121</b>
<i>J.M. Greenberg</i>	
12.1 Introduction	121
12.2 Size, shape and composition of interstellar dust	122
12.3 Dust aggregation and morphology	126
12.4 Evolution of the nucleus in the Oort cloud and later	129
12.5 Comparison of the interstellar dust model with Comet Halley results	132
12.6 Conclusions	137
<b>13 The relationship between interstellar dust and the isotopic anomalies in meteorites</b>	<b>145</b>
<i>D.D. Clayton</i>	
13.1 Introduction	145
13.2 Mechanisms for isotopic chemical memory	146
13.3 Conclusions	151
<b>14 The near-nucleus dust region and source activity of Comet P/Halley observed by the Halley Multicolour Camera</b>	<b>153</b>
<i>H.U. Keller and N. Thomas</i>	
14.1 Introduction	153
14.2 Modelling the extended sources of activity	154

<b>15 Video of Giotto's encounter with Comet P/Halley</b>	<b>161</b>
<i>N. Thomas, J.-R. Kramm and H.U. Keller</i>	
15.1 Introduction	161
15.2 Data preparation	162
15.3 The animated sequence	163
<b>• 16 Invited review</b>	
<b>Solar system dust as a guide to interstellar matter</b>	<b>169</b>
<i>J.A.M. McDonnell</i>	
16.1 Solar system dust: sources for direct study	169
16.2 Selection factors in dust sources	171
16.3 The story so far	173
16.4 The interstellar grain within stratospheric particles	178
16.5 Opportunities ahead	179
<b>17 A model of the interplanetary dust emission</b>	<b>183</b>
<i>P. Temi, P. de Bernardis, S. Masi, G. Moreno and A. Salama</i>	
17.1 Introduction	183
17.2 The new model	184
<b>18 The near-earth flux of microgram dust</b>	<b>187</b>
<i>D.I. Olsson-Steel</i>	
18.1 Introduction	187
18.2 HF and VHF radar meteor height distributions	188
18.3 Mass influx to the earth	189
18.4 Implications for the complex of solid material in the solar system	190
<b>19 The spectral properties of collected interplanetary dust particles</b>	<b>193</b>
<i>S.A. Sandford</i>	
19.1 Spectral properties of the dust	193
19.2 Interpretation of cometary data	195
19.3 Conclusions	197
<b>20 Intrinsic geometry of extraterrestrial particulate matter</b>	<b>199</b>
<i>B. Lang</i>	
<b>21 3.4 and 10 <math>\mu\text{m}</math> emission from Comet Halley dust — further evidence for interstellar dust with silicate cores and organic refractory mantles</b>	<b>203</b>
<i>N.S. Zhao and J.M. Greenberg</i>	
21.1 Introduction	203
21.2 The 3.4 $\mu\text{m}$ feature as a thermometer of cometary dust	204

21.3	The dust-to-gas ratio	205
• 22	<b>Invited review</b>	
	<b>Models of interstellar grains</b>	<b>209</b>
	<i>W.W. Duley</i>	
22.1	Introduction	209
22.2	Extinction, polarization and scattering by dust	209
22.3	Infrared emission/absorption	210
22.4	Visible and near-infrared emission from dust	211
22.5	Modelling of interstellar extinction	212
22.6	A new grain model	213
22.7	Conclusion	216
23	<b>The nature of very small grains: the PAH hypothesis</b>	<b>219</b>
	<i>A. Léger and L.B. d'Hendecourt</i>	
23.1	Introduction	219
23.2	Observations	220
23.3	Interpretation	220
23.4	The PAH hypothesis and its implications	222
23.5	Conclusions	223
24	<b>Scattering and extinction by non-spherical particles</b>	<b>225</b>
	<i>J.I. Hage and J.M. Greenberg</i>	
24.1	Introduction	225
24.2	Method	225
24.3	Discussion	227
• 25	<b>Invited review</b>	
	<b>Laboratory simulation of dust spectra</b>	<b>229</b>
	<i>L.J. Allamandola and S.A. Sandford</i>	
25.1	Introduction	229
25.2	Infrared absorption	232
25.3	Infrared emission	251
25.4	Conclusions	257
26	<b>A photochemical origin of the 217.5 nm interstellar extinction hump</b>	<b>265</b>
	<i>M.S. de Groot, G.P. van der Zwet, P.M.M. Jenniskens, R. Bauer, F. Baas and J.M. Greenberg</i>	
26.1	Introduction	265
26.2	Photochemical experiments with isolated molecules	266
26.3	The photochemical formation of hump material	268
26.4	Discussion	269

26.5	Conclusions	271
<b>27</b>	<b>Formation of ions in interstellar grain mantles</b>	<b>275</b>
	<i>R.J.A. Grim, J.M. Greenberg and W.A. Schutte</i>	
27.1	Introduction	275
27.2	The 4.62 $\mu\text{m}$ OCN <sup>-</sup> absorption	275
27.3	The 6.86 $\mu\text{m}$ absorption	276
27.4	Formation mechanism of ions in dirty ices	277
27.5	Conclusions	278
<b>28</b>	<b>Formaldehyde formation in H<sub>2</sub>O/<sup>13</sup>CD<sub>4</sub> frozen mixtures by swift ions</b>	<b>281</b>
	<i>V. Pirronello, W.L. Brown, L.J. Lanzerotti, G. Lanzafame and D. Averna</i>	
28.1	Introduction	281
28.2	Experimental	282
28.3	Results	283
28.4	Summary	285
<b>29</b>	<b>Temperature dependence of PAH molecule absorption bands</b>	<b>287</b>
	<i>A. Blanco, A. Borghesi, S. Fonti, V. Orofino, E. Bussoletti and L. Colangeli</i>	
29.1	Introduction	287
29.2	Laboratory measurements and results	288
29.3	Conclusions	290
<b>30</b>	<b>Volatile molecules in interstellar grain mantles: diffusion and infrared band strength</b>	<b>291</b>
	<i>B. Schmitt, R.J.A. Grim and J.M. Greenberg</i>	
30.1	Composition of interstellar ice mantles	291
30.2	Molecule diffusion in water-rich ice mixtures	291
30.3	Temperature dependence of the infrared integrated intensities	293
30.4	Implications for the composition of grain mantles	293
30.5	Conclusion	295
<b>31</b>	<b>Non-equilibrium optical and infrared emission from interstellar dust</b>	<b>297</b>
	<i>W.W. Duley</i>	
31.1	Introduction	297
31.2	Structure of carbon dust	298
31.3	Electronic properties of amorphous carbon	298
31.4	Excess emission at 3.28 $\mu\text{m}$	299
31.5	Excess visible and near-infrared emission	300
31.6	Summary	300

• <b>32 Invited review</b>	
<b>Grain destruction and growth</b>	<b>303</b>
<i>C.G. Seab</i>	
32.1 Introduction	303
32.2 Observations of grain processing	304
32.3 Mechanisms for grain destruction	312
32.4 Implications for grain models	317
32.5 Conclusions	323
<b>33 Dust and star formation in a hot differentiating medium</b>	<b>327</b>
<i>S.V.M. Clube</i>	
33.1 Spiral arms as cooling flows	327
33.2 Dust formation in spiral arms	328
33.3 Dynamical implications	330
33.4 Recent findings	331
33.5 Conclusion	333
<b>34 Cosmochemical constraints on the production of graphite grains</b>	<b>337</b>
<i>A.P. Whitworth</i>	
34.1 Introduction	337
34.2 Cosmochemical models	338
34.3 Results	339
34.4 Discussion	340
34.5 Conclusions	341
<b>35 Monte-Carlo histories of refractory interstellar dust</b>	<b>343</b>
<i>D.D. Clayton and K. Liffman</i>	
35.1 Introduction	343
35.2 A specific model	344
35.3 Calculation and results	347
35.4 Critical conclusions	352
• <b>36 Invited review</b>	
<b>The dynamical effects of circumstellar dust</b>	<b>355</b>
<i>H.W. Yorke</i>	
36.1 Introduction	355
36.2 The dynamical effects of dust in envelopes around young objects	359
36.3 Dust around evolved stars	362

<b>37 On the possibility of dust grains in the accretion discs of close binary systems</b>	<b>373</b>
<i>R.N. Jenkins and A. Evans</i>	
37.1 Introduction	373
37.2 Grain condensation within the system	374
37.3 Grain ejection mechanisms	378
37.4 Conclusions	379
<b>38 The light echoes and dusty outflows of Eta Carinae</b>	<b>381</b>
<i>J. Meaburn, R.D. Wolstencroft, J.C. Raymond, J.R. Walsh and J.A. López</i>	
38.1 Introduction	381
38.2 The H $\alpha$ profile of Eta Carinae	381
38.3 The Homunculus	383
38.4 The outer shell	387
38.5 Light echoes	389
<b>• 39 Invited review</b>	
<b>Chemical effects of dust</b>	<b>391</b>
<i>D.A. Williams</i>	
39.1 Introduction	391
39.2 Depletions	393
39.3 Molecule hydrogen formation	394
39.4 Formation of other molecules at grain surfaces	395
39.5 Grain disruption	396
39.6 Molecular mantles	397
39.7 The rôle of dust grains in molecular clouds	397
<b>40 The evolution of organic refractory mantles on interstellar grains</b>	<b>403</b>
<i>W.A. Schutte and J.M. Greenberg</i>	
40.1 Introduction	403
40.2 Observations of interstellar organic solids	403
40.3 Production of organic species on molecular cloud dust grains	405
40.4 Further evolution of the organic mantle material in the diffuse medium	405
40.5 The life cycle of an interstellar grain	406
<b>41 Radical reactions on the surface of dust grains</b>	<b>407</b>
<i>P.D. Brown</i>	
41.1 Introduction	407
41.2 Factors governing surface chemistry	408
41.3 Proposed mechanism	409

41.4	Conclusions	412
● 42 Invited review		
	<b>Dust in and towards the Galactic Centre</b>	<b>415</b>
	<i>P.F. Roche</i>	
42.1	Introduction	415
42.2	The path to the Galactic Centre	416
42.3	Dust in the Galactic Centre	420
42.4	Polarization studies	425
42.5	The unidentified infrared emission bands	427
42.6	Summary	429
● 43 Dust and the mass of gas in the Galaxy		
	<b>435</b>	<b>435</b>
	<i>A. Broadbent, I. MacLaren and A.W. Wolfendale</i>	
43.1	Introduction	435
43.2	Sources of far-infrared data and models	436
43.3	Methods used and their results	436
43.4	Discussion	438
43.5	Conclusions	439
● 44 Far-infrared diffuse emission at high galactic latitudes		
	<b>441</b>	<b>441</b>
	<i>P. de Bernardis, S. Masi, F. Melchiorri, G. Moreno, R. Vannoni and S. Aiello</i>	
44.1	Introduction	441
44.2	IRAS diffuse data	442
44.3	IRAS data and galaxy counts	444
44.4	Conclusions	446
● 45 Invited review		
	<b>Dust in the Magellanic Clouds, M 31 and M 33, and large-scale variations in the Galaxy</b>	<b>449</b>
	<i>J. Lequeux</i>	
45.1	Introduction	449
45.2	Interstellar extinction variations in the infrared and the visible	450
45.3	Extinction in the ultraviolet	452
45.4	The gas-to-dust ratio	457
45.5	Summary and conclusions	457
● 46 Variations in interstellar extinction		
	<b>461</b>	<b>461</b>
	<i>A.P. Jones, W.W. Duley and D.A. Williams</i>	
46.1	Introduction	461
46.2	Grain model	462
46.3	Extinction variations and the grain model	462

46.4	Extinction and interstellar carbon solids	464
46.5	Conclusions	464
• 47	<b>Invited review</b>	
	<b>Dust in galaxies</b>	<b>467</b>
	<i>R.D. Joseph</i>	
47.1	Introduction	467
47.2	The infrared perspective on dust in galaxies	467
47.3	Infrared 'cirrus' and very small dust grains in the Galaxy	469
47.4	Observational evidence for dust in elliptical galaxies	470
47.5	Observations of dust in spiral galaxies	471
47.6	Models of infrared emission from dust in galaxies	472
47.7	Some current problems associated with dust in galaxies	473
48	<b>Extended far-infrared emission in the Leo Triplet of galaxies</b>	<b>483</b>
	<i>P.N. Appleton and D.H. Hughes</i>	
48.1	Introduction	483
48.2	Observations	483
48.3	Results	484
49	<b>Continuum observations of starburst and active galaxies</b>	<b>487</b>
	<i>E.I. Robson</i>	
49.1	Introduction	487
49.2	Starbursts	487
49.3	Active galaxies	488
50	<b>IRAS mapping of active galaxies</b>	<b>493</b>
	<i>A.P. Marston</i>	
50.1	Far-infrared observations	493
50.2	Suggestions for the source of the X-ray emission	495
50.3	Conclusions	496
51	<b>Submillimetre emission from dust</b>	<b>497</b>
	<i>E. Krügel</i>	
51.1	Infrared emission from young stars	497
51.2	Interstellar cloud masses	497
51.3	Dust properties at far-IR and submm wavelengths	498
52	<b>Dust in early-type galaxies</b>	<b>501</b>
	<i>N. Brosch</i>	
52.1	Introduction	501
52.2	Dust in our galaxy and in others	501
52.3	New results	503
52.4	The state of the dust	504

52.5	Conclusions	505
<b>53</b>	<b>Observational data on the intergalactic dust</b>	<b>509</b>
	<i>B. Wszolek, K. Rudnicki, P. de Bernardis and S. Masi</i>	
53.1	General considerations	509
53.2	Significance of infrared observations	510
53.3	Possible implications for galaxy formation	510
<b>54</b>	<b>Dust grains in galactic haloes</b>	<b>513</b>
	<i>F. Ferrini, B. Barsella and J.M. Greenberg</i>	
54.1	A synthetic view of the behaviour of different dust grains in the haloes of spiral galaxies	513
54.2	An overview of the observational and theoretical consequences	514
<b>• 55</b>	<b>Invited review</b>	
	<b>Summary and future prospects</b>	<b>521</b>
	<i>J.S. Mathis</i>	
55.1	Introduction	521
55.2	The 'known' properties of dust	522
55.3	Current problems regarding grains	525
55.4	Future prospects	529
<b>56</b>	<b>Abstracts of poster presentations</b>	<b>533</b>
56.1	The ultraviolet radiation field within dense clouds: some consequences	533
	<i>S. Aiello, B. Barsella, C. Cecchi-Pestellini, F. Ferrini and F. Mencaraglia</i>	
56.2	Ultraviolet extinction towards the Carina Nebula	533
	<i>S. Aiello, B. Barsella, G. Chlewicki, J.M. Greenberg, P. Patriarchi and M. Perinotto</i>	
56.3	Observational constraints on interstellar dust	534
