

CONTENTS

Preface by Professor Maurice Roy, President of COSPAR	v
List of the members of COSPAR Working Group IV	ix
General Introduction by Dr. H. Kallmann-Bijl	xii
 Part I. <i>Mean atmospheric structure in the region from 30 to 300 km</i>	
1. Introduction	3
2. List of nomenclature	3
3. Model between 30 and 80 km	4
4. Model between 80 and 120 km	5
5. Model between 120 and 300 km	6
6. Variations from mean atmosphere	8
References	10
 Part II. <i>Atmospheric structure and its variations in the region from 30 to 100 km</i>	
1. Introduction	29
2. List of nomenclature	30
3. Atmospheric temperature	30
4. Turbulent mixing and composition	32
5. Mean zonal winds latitudinal temperature changes and meridional flow	32
6. Diurnal and seasonal variations in atmospheric structure	35
7. Observational data available for construction of tables	35
8. Construction of model of W-to-E winds, 30 to 80 km	37
9. Construction of temperature model, 30 to 80 km	52
10. Pressure and density tables	62
11. Reference values for particular measuring techniques	85
References	88

Part III. *Atmospheric structure and its variations in the region from 120 to 800 km*

1. Introduction	91
2. List of nomenclature	93
3. Basic relations	93
4. The tables of the atmospheric properties in the range from 120 to 800 km for ten different levels of solar activity	96
5. The accuracy of the data	109
6. Comparison with individual measurements of atmospheric parameters	112
6.1. The 27-day variation	112
6.2. The geomagnetic activity effect	113
6.3. The semi-annual variation	115
6.4. Summary of the reduction procedure	115
References	117
Appendix I. <i>Atmospheric structure in the lower thermosphere, by K. S. W. Champion</i>	261
Appendix II. <i>Atmospheric structure and its variations at heights above 200 km, by L. G. Jacchia</i>	293
