

CONTENTS

CHAPTER I. BACKGROUND AND OVERVIEW

I-1.	Introduction	1
I-2.	Rationale for fast breeder reactors	2
I-3.	Liquid metal cooled fast breeder reactors	4
I-4.	Historical development – Overview	6
I-5.	Contents of the report	9
	References	10

CHAPTER II. NATIONAL PROGRAMMES

II-1.	Introduction	13
II-2.	France	16
II-2.1.	Nuclear energy development	16
II-2.2.	FBR development programme	17
II-2.2.1.	General review	
II-2.2.2.	Fast reactor R&D programme and test facilities	
II-2.2.3.	Fuel reprocessing	
II-2.3.	International co-operation	20
II-3.	Federal Republic of Germany/Belgium/The Netherlands	22
II-3.1.	Nuclear energy development	22
II-3.2.	FBR development programme	22
II-3.2.1.	General review	
II-3.2.2.	Fast reactor R&D programme and test facilities	
II-3.2.3.	Fuel cycle activities	
II-3.3.	International co-operation	25
II-4.	India	27
II-4.1.	Nuclear energy development	27
II-4.2.	FBR development programme	27
II-4.2.1.	General review	
II-4.2.2.	Fast reactor R&D programme and test facilities	

II-5.	Italy	29
II-5.1.	Nuclear energy development	29
II-5.2.	FBR development programme	29
	II-5.2.1. General review	
	II-5.2.2. Fast reactor R&D programme and test facilities	
	II-5.2.3. Fuel reprocessing	
II-6.	Japan	31
II-6.1.	Nuclear energy development	31
II-6.2.	FBR development programme	32
	II-6.2.1. General review	
	II-6.2.2. Fast reactor R&D programme and test facilities	
	II-6.2.3. Fuel reprocessing	
II-6.3.	International co-operation	34
II-7.	Union of Soviet Socialist Republics	35
II-7.1.	Nuclear energy development	35
II-7.2.	FBR development programme	36
II-7.3.	International co-operation	38
II-8.	United Kingdom	38
II-8.1.	Nuclear energy development	38
II-8.2.	FBR development programme	39
	II-8.2.1. General review	
	II-8.2.2. Supporting research and development	
	II-8.2.3. Fuel reprocessing	
II-8.3.	International co-operation	41
II-9.	United States of America	42
II-9.1.	Nuclear energy development	42
II-9.2.	FBR development programme	42
	II-9.2.1. General review	
	II-9.2.2. Supporting research and development	
	II-9.2.3. Test facilities	
	II-9.2.4. Fuel reprocessing	
II-9.3.	International co-operation	47
II-10.	Other fast breeder activities	48
II-10.1.	Switzerland	48
II-10.2.	Commission of the European Communities	48

CHAPTER III. LMFBR EXPERIENCE

III-1. Introduction	55
III-2. France	58
III-2.1. RAPSODIE	58
III-2.1.1. Operating experience	
III-2.2. PHENIX.....	62
III-2.2.1. Design features	
III-2.2.2. Operating experience	
III-2.2.3. Plant incident statistics	
III-2.2.4. Radiological safety	
III-2.3. SUPER PHENIX-1	68
III-2.3.1. Design features	
III-2.3.2. Present status (1983/84)	
III-2.4. SUPER PHENIX-2	69
III-3. DeBeNe countries	70
III-3.1. KNK II.....	70
III-3.1.1. Operating experience	
III-3.2. SNR 300	73
III-3.2.1. Design features	
III-3.2.2. Present status	
III-3.3. SNR-2	75
III-3.3.1. Plant history	
III-3.3.2. Loop versus pool analysis	
III-3.3.3. Nuclear core design	
III-4. India	77
III-4.1. FBTR.....	77
III-5. Italy	78
III-5.1. PEC	78
III-5.1.1. Design features	
III-5.1.2. Present status	
III-6. Japan	80
III-6.1. JOYO	80
III-6.1.1. Operating experience	
III-6.2. MONJU	82
III-6.2.1. Design features	
III-6.2.2. Safety features	
III-6.2.3. Present status of licensing	
III-7. Union of Soviet Socialist Republics	87
III-7.1. BR-2	87

III-7.2.	BR 5/BR 10	88
	III-7.2.1. Operating experience	
III-7.3.	BOR 60.....	91
	III-7.3.1. Operating experience	
III-7.4.	BN 350	93
	III-7.4.1. Design features	
	III-7.4.2. Operating experience	
	III-7.4.3. Steam generators	
III-7.5.	BN 600	99
	III-7.5.1. Commissioning	
	III-7.5.2. Operating experience	
III-7.6.	BN 800/BN 1600	104
III-8.	United Kingdom	105
III-8.1.	DFR.....	105
	III-8.1.1. Operating experience	
III-8.2.	PFR	108
	III-8.2.1. Design features	
	III-8.2.2. Operating experience	
III-8.3.	CDFR	113
III-9.	United States of America	114
III-9.1.	CLEMENTINE.....	114
III-9.2.	EBR-I.....	116
	III-9.2.1. Operating experience	
III-9.3.	LAMPRE.....	119
III-9.4.	EFFBR	120
	III-9.4.1. Operating experience	
III-9.5.	EBR-II	124
	III-9.5.1. Operating experience	
	III-9.5.2. EBR-II fuel cycle facility	
III-9.6.	SEFOR	128
	III-9.6.1. Operating experience	
III-9.7.	FFTF	132
	III-9.7.1. Operating experience	
III-9.8.	CRBR	135
	III-9.8.1. Design features	
APPENDIX: DESIGN DESCRIPTION OF SNR 300 AND SUPER PHENIX-1		136
A-III-1.	Design description of SNR 300	136
	A-III-1.1. Reactor core and blankets	
	A-III-1.2. Reactor vessel and primary coolant circuits	

A-III-1.3.	Secondary coolant circuits and steam generation	
A-III-1.4.	Safety features	
A-III-2.	Design description of SUPER PHENIX-1	140
A-III-2.1.	Reactor core and blankets	
A-III-2.2.	Reactor vessel and primary coolant circuits	
A-III-2.3.	Secondary coolant circuits and steam generation	
A-III-2.4.	Safety features	
References	147

CHAPTER IV. REACTOR PHYSICS AND CORE DESIGN

IV-1.	Introduction	153
IV-2.	Neutronics	155
IV-2.1.	Basic facts and definitions.....	156
IV-2.1.1.	Characterization of important quantities	
IV-2.1.2.	Breeding gain, doubling time	
IV-2.1.3.	Plutonium vector, buildup of higher actinides and fission products	
IV-2.1.4.	Delayed neutrons	
IV-2.1.5.	Decay heat	
IV-2.1.6.	Displacement cross-sections	
IV-2.2.	Nuclear data.....	169
IV-2.2.1.	Measurements: Differential and integral	
IV-2.2.2.	Data files	
IV-2.2.3.	Group cross-section sets, generation, uncertainties, sensitivity studies, adjustment methods	
IV-2.3.	Calculational methods, codes	174
IV-2.3.1.	Quantities to be calculated	
IV-2.3.2.	Neutron balance equation	
IV-2.3.3.	Usual and advanced mathematical methods of reactor physics	
IV-2.3.3.1.	Diffusion theory	
IV-2.3.3.2.	Transport theory	
IV-2.3.3.3.	Coarse mesh, finite elements, nodal methods	
IV-2.3.4.	Neutron importance, perturbation formalism	

IV-2.3.5.	Corrections and special treatments	
IV-2.3.5.1.	Heterogeneity	
IV-2.3.5.2.	Neutron streaming	
IV-2.3.6.	Burnup, fission products, transactinides	
IV-2.3.7.	In-core fuel management	
IV-2.3.8.	Reactor kinetics and LMFBR-related important reactivity coefficients	
IV-2.3.8.1.	Reactor kinetics	
IV-2.3.8.2.	Sodium void effect	
IV-2.3.8.3.	Doppler effect	
IV-2.3.8.4.	Central worth discrepancy	
IV-3.	Code and data validation	202
IV-3.1.	Critical experiments in zero power facilities	202
IV-3.2.	Reactor startup	203
IV-3.3.	The benchmark approach	203
IV-4.	State of the art	204
IV-4.1.	k_{eff}	204
IV-4.2.	Control rod worth	208
IV-4.3.	Power distribution	211
IV-4.3.1.	Fission energy production	
IV-4.3.2.	Gamma energy production	
IV-4.4.	Reaction rate ratios, breeding ratio	216
IV-4.5.	Reactivity coefficients	218
IV-4.5.1.	The Na-void effect	
IV-4.5.2.	The Doppler effect	
IV-4.6.	Burnup effects, reactivity loss per cycle	222
IV-4.7.	Streaming, slumping	225
IV-4.8.	Shielding	227
APPENDIX: LIST OF MAJOR DATA LIBRARIES AND COMPUTER CODES USED IN FAST REACTOR NEUTRON PHYSICS...		232

CHAPTER V. FUELS AND MATERIALS

V-1.	Introduction	251
V-2.	Fuels	253
V-2.1.	Mixed oxide fuels	253
V-2.1.1.	Physical and chemical properties	
V-2.2.	Advanced fuels	254
V-2.3.	Metallic fuels	255

V-3.	Structural materials	256
V-3.1.	Fuel pin cladding and the subassembly duct (wrapper)	256
V-3.2.	Advanced cladding and duct materials	264
V-3.3.	Materials for the primary circuit	265
V-4.	Fuel subassemblies	267
V-4.1.	Fuel pin design	267
V-4.2.	Subassembly design	268
V-4.3.	Selection of cladding and duct materials	271
V-5.	Oxide fuel performance	273
V-5.1.	Fuel restructuring	273
V-5.2.	Fuel swelling	275
V-5.3.	Fission gas release	275
V-5.4.	Mechanical interaction between fuel and cladding	277
V-5.5.	Chemical interaction between fuel and cladding	277
V-5.6.	Achievable burnup	278
V-5.7.	Future development	280
V-6.	Advanced fuel experience	281
V-6.1.	Carbide fuel	281
V-6.2.	Nitride fuel	283
V-7.	Fuel failure	284
V-8.	Blanket elements	285
V-9.	Absorber materials	285
V-9.1.	Boron carbide	286
V-9.2.	Europium compounds	288
V-9.3.	Tantalum	289
V-9.4.	Absorber rods	289
V-10.	Influence of sodium on material properties	290
V-10.1.	Sodium corrosion and mass transfer	290
V-10.2.	Effect of sodium environment on metal properties	291
References	292

CHAPTER VI. REACTOR ENGINEERING

VI-1.	Introduction	299
VI-2.	General plant design	299
VI-2.1.	Design features of LMFBRs	299
VI-2.2.	Boundary conditions for the core and plant design	301
VI-2.3.	Optimization of plant design parameters	304

VI-3.	LMFBR core design	305
VI-3.1.	LMFBR core geometry	305
VI-3.2.	Fuel pin and fuel assembly design	305
VI-3.2.1.	Fuel pin analysis	
VI-3.2.2.	Temperature profile within a fuel pin	
VI-3.2.3.	Mechanical analysis of the fuel pin	
VI-3.3.	Core fuel enrichment and fissile fuel inventory	313
VI-3.4.	Optimization of core design parameters	314
VI-3.5.	Fuel assembly design	315
VI-3.6.	Radial blanket assembly design	318
VI-3.7.	Absorber design	318
VI-3.8.	Shielding assemblies	320
VI-3.9.	Major computer codes used in LMFBR core design	320
VI-4.	LMFBR core design: Homogeneous versus heterogeneous cores	321
VI-4.1.	Heterogeneous core designs	324
VI-4.2.	Thermal hydraulics, core mechanics, and safety aspects of heterogeneous cores	329
VI-5.	Thermal hydraulics and core design	330
VI-5.1.	Methods of thermal-hydraulic analysis	333
VI-5.1.1.	Coolant flow distribution and orificing	
VI-5.1.2.	Subchannel analysis	
VI-5.1.3.	Distributed-parameter analysis	
VI-5.1.4.	Hot-spot analysis	
VI-5.1.5.	Off-normal conditions	
VI-5.2.	Empirical input	343
VI-5.2.1.	Turbulent flow	
VI-5.2.2.	Laminar flow	
VI-6.	Reactor tank and main heat transport systems	348
VI-6.1.	Principal design concepts: Loop and pool	348
VI-6.2.	Reactor vessel	350
VI-6.2.1.	SNR 300: A loop design	
VI-6.2.2.	SUPER PHENIX: A pool design	
VI-6.2.3.	Structural design of the core diagrid and the tank/vessel system	
VI-6.3.	Sodium pumps	355
VI-6.4.	Intermediate heat exchangers	359
VI-6.5.	Steam generators	363
VI-6.6.	High temperature stress and strain analysis	372
VI-7.	Refuelling equipment	373
VI-8.	Auxiliary systems	377
VI-8.1.	Sodium purification and impurity monitoring systems	378

VI-9. In-service inspection	381
VI-9.1. Development of inspection methods	381
VI-9.2. In-service inspection of the tank.....	382
VI-9.2.1. SUPER PHENIX	
VI-9.2.2. SNR 300	
VI-9.3. Under-sodium viewing systems	386
VI-9.4. Television and periscope inspection methods	386
VI-9.5. Acoustic monitoring techniques.....	386
References	387

CHAPTER VII. LMFBR SAFETY

VII-1. Introduction	397
VII-2. Safety design and development concept	398
VII-2.1. Multi-barrier concept	399
VII-2.2. Lines of defence, lines of assurance	400
VII-2.2.1. Basic safety design	
VII-2.2.2. Accident prevention	
VII-2.2.3. Limitation of core damage	
VII-2.2.4. Limitation of damage propagation	
VII-2.2.5. Attenuation of radioactivity release	
VII-2.3. Defence in depth, classification of accidents	404
VII-2.4. Operational transient and accident analysis approaches ...	407
VII-2.4.1. Mechanistic approach	
VII-2.4.2. Probabilistic approach	
VII-2.4.3. Phenomenological approach	
VII-3. New trends in safety criteria and safety goals	410
VII-3.1. New safety concepts	411
VII-3.2. Quantification of safety goals	415
VII-4. Protected transient conditions of the LMFBR plant	417
VII-4.1. Plant protection system.....	417
VII-4.2. Design criteria for the PPS and related safety systems.....	418
VII-4.2.1. Mechanisms for positive reactivity insertions	
VII-4.2.2. Design criteria of the PPS and related shutdown systems	
VII-4.2.3. Mechanisms leading to impairment of heat removal	
VII-4.3. Instrumentation and monitoring of the PPS.....	422
VII-4.3.1. Measurement of power level	

VII-4.3.2.	Temperature measurement	
VII-4.3.3.	Sodium flow measurement	
VII-4.3.4.	Pressure measurement	
VII-4.3.5.	Sodium level detection	
VII-4.3.6.	Sodium leak and aerosol detection	
VII-4.3.7.	Fuel failure detection	
VII-4.3.8.	Hydrogen detection after failure of a steam generator tube	
VII-4.4.	Scram signals for actuating reactivity shutdown systems	427
VII-4.5.	Reactivity shutdown systems	428
VII-4.6.	Redundancy and diversity of safety systems	431
VII-4.7.	Decay heat removal systems	433
VII-4.8.	Local fault propagation	436
VII-4.9.	Protection during refuelling	442
VII-4.10.	Whole core and plant transients	443
VII-4.10.1.	Positive reactivity transients	
VII-4.10.2.	Loss of primary flow	
VII-4.10.3.	Transient events in sodium and steam circuits	
VII-4.11.	Pipe rupture in coolant circuits	446
VII-4.12.	Sodium fires	447
VII-4.12.1.	Sodium pool fires	
VII-4.12.2.	Sodium spray fires	
VII-4.12.3.	Filters for sodium aerosols	
VII-4.12.4.	Sodium-concrete reactions	
VII-4.13.	Sodium-water interactions in steam generators	450
VII-4.13.1.	Experimental results	
VII-4.13.2.	Theoretical methods	
VII-4.13.3.	Propagation of steam generator defects in the tube bundle	
VII-4.13.4.	Instrumentation of steam generators	
VII-5.	Unprotected transients	454
VII-5.1.	Accident paths structure	456
VII-5.2.	Analysis of the unprotected loss of flow accident for the SNR 300	457
VII-5.2.1.	Best estimate ULOF accident path	
VII-5.2.2.	Energetic ULOF accident paths	
VII-5.3.	Some remarks about the low ramp rate unprotected transient overpower accident	459
VII-5.4.	Role of sodium reactivity effect for accident progression	460

VII-5.5. Some key issues of accident energetics for core disruptive accidents	460
VII-5.6. Dynamic loading of the reactor tank and the coolant circuits	463
VII-5.7. Post-accident heat removal	471
VII-5.7.1. Status of present research programmes	
VII-5.8. Source terms for containment analysis.....	475
VII-5.8.1. Theoretical and experimental programmes of aerosol behaviour	
VII-5.9. Comparison of different containment designs for LMFBRs	479
VII-6. Inherent safety features of LMFBRs	482
VII-7. External events	487
VII-7.1. Floods and tornadoes	487
VII-7.2. Chemical explosions	487
VII-7.3. Aircraft crashes	487
VII-7.4. Earthquakes	488
VII-8. Risk analysis	488
VII-8.1. Methodology of risk analysis	489
VII-8.2. Results of SNR 300 risk analysis	491
VII-8.3. Risk analysis for the whole fuel cycle	504
APPENDIX: LIST OF MAJOR COMPUTER CODES USED FOR ANALYSIS OF THE DIFFERENT ACCIDENT PHASES.....	505
References	509

CHAPTER VIII. THE FUEL CYCLE OF FAST BREEDER REACTORS

VIII-1. Introduction	527
VIII-2. Basis of the LMFBR fuel cycle	527
VIII-2.1. Rationale and differences compared with the thermal (LWR) fuel cycle	528
VIII-2.2. Mass flow in the model LMFBR fuel cycle.....	531
VIII-2.3. Ex-core time periods	532
VIII-3. Front-end of the LMFBR fuel cycle	533
VIII-3.1. Fuel resources	533

VIII–6.2. Safeguards aspects.....	561
VIII–6.2.1. National safeguards – state system of accounting and control	
VIII–6.2.1.1. Features of SSAC	
VIII–6.2.1.2. Objectives of SSAC	
VIII–6.2.1.3. Relationship between SSAC and IAEA safeguards	
VIII–6.2.2. International (IAEA) safeguards	
VIII–6.2.2.1. IAEA safeguards objective	
VIII–6.2.2.2. Basic IAEA safeguards approach	
VIII–6.2.3. Multinational (EURATOM) safeguards	
VIII–6.2.3.1. Features of the EURATOM safeguards system	
VIII–6.2.3.2. Objectives of the system	
VIII–6.2.3.3. Relationship between EURATOM and IAEA safeguards systems	
VIII–6.2.4. Safeguards for FBRs	
VIII–6.2.4.1. Safeguards approach for FBRs	
VIII–6.2.4.2. Application of safeguards measures at LMFBRs	
VIII–6.2.5. Safeguards for fuel cycle facilities	
VIII–6.2.5.1. Safeguards approach for the FBR fuel cycle	
VIII–6.2.5.2. Application of safeguards measures at FBR fuel cycle facilities	
VIII–6.2.6. Experience in applying safeguards to FBRs and fuel cycle facilities	
VIII–6.3. Safety aspects	573
VIII–6.3.1. Safety design measures in reprocessing plants	
VIII–6.3.2. Safety considerations for mixed fuel refabrication plants	
VIII–6.4. Environmental impact.....	575
VIII–6.4.1. Nuclides of importance for environmental effects	
VIII–6.4.1.1. Radioactive releases and exposure pathways	
VIII–6.4.1.2. Detailed discussion of the nuclides emitted	

VIII-6.4.2. Releases at the various stations of the fuel cycle	
VIII-6.4.2.1. Fuel fabrication plant	
VIII-6.4.2.2. Reactor power plant	
VIII-6.4.2.3. Reprocessing plant	
VIII-6.4.3. Radiation exposure	
VIII-6.5. Waste treatment and disposal	589
VIII-6.5.1. Treatment of different wastes	
VIII-6.5.2. Waste volumes from the LMFBR fuel cycle	
VIII-6.6. Decommissioning of LMFBR facilities	593
VIII-6.6.1. General aspects	
VIII-6.6.2. Practical experience	
References	596

CHAPTER IX. LMFBR DEPLOYMENT

IX-1. Introduction	601
IX-2. Potential role of fast breeder reactors in energy supply	602
IX-2.1. Nuclear energy development	602
IX-2.2. Nuclear fuel resources	605
IX-2.3. Strategic considerations	610
IX-3. Economic aspects of LMFBRs	615
IX-3.1. Introduction	615
IX-3.2. Contributions to LMFBR electricity generating costs.....	616
IX-3.3. Capital costs	616
IX-3.4. Fuel cycle costs.....	621
IX-3.5. Parametric fuel cycle cost studies	625
IX-3.6. Total electricity generating costs.....	628
IX-4. Deployment considerations	631
IX-4.1. Motivation for breeder reactor programmes	631
IX-4.2. Phases of a fast breeder programme	632
IX-4.3. Organizational aspects and international collaboration	633
IX-4.4. Future perspectives, barriers and frontiers	634
References	636

CHAPTER X. SUMMARY AND FUTURE TRENDS

X-1. Introduction	639
X-2. The need	639

X-3. The problems	640
X-4. The outlook	642
Selected Bibliography	645
Annex: Credits	651
List of Abbreviations	653
Subject Index	667
