

CONTENTS

PART 1 SURVEY

CHAPTER 1 THE ENERGY- ENVIRONMENT PROBLEM 3

1.1 THE NATURE OF THE PROBLEM 3

Conflicting Requirements
Trends and Projections
Energy Definitions
Doubling Time

1.2 CONTRIBUTING FACTORS 11

Population
Technology

CHAPTER 2 ENERGY RESOURCES REVIEW 20

2.1 THE EARTH'S ENERGY FLOW 20

2.2 THE FOSSIL FUELS 20

Petroleum Fuels
Coal
Synthetic Petroleum Products

2.3 GEOPHYSICAL ENERGY 35

Hydroelectricity
Wind Power
Geothermal Power
Solar Power

2.4 NUCLEAR ENERGY 44

Fission
Breeder Reactors
Fusion

PART 2 ENERGY CONVERSION PROCESSES

CHAPTER 3 ELEMENTS OF THERMODYNAMICS 61

3.1 THE FIRST LAW OF THERMODYNAMICS 61

Conservation of Energy
Temperature
Heat

3.2 APPLICATIONS OF THE FIRST LAW 66

Work
Internal Energy
Ideal Gas
Four Processes

3.3 THE SECOND LAW OF THERMODYNAMICS 72

Reversibility
The Carnot Cycle
Entropy
Second Law Efficiency

CHAPTER 4	HEAT ENGINES	82	PART 3	HEAT GENERATION AND MANAGEMENT	
4.1	INTERNAL COMBUSTION ENGINES	82	CHAPTER 6	HEAT SOURCES	165
	The Otto Cycle		6.1	COMBUSTIBLE FUELS	166
	Environmental Effects			Physics of Combustion	
	Catalytic Converters			Synthetic Hydrocarbons	
	Diesel Engines			Hydrogen	
	Rotary Engines			Alcohols	
4.2	TURBINES	98		Fuels from Wastes	
	Fluid Flow		6.2	GEO THERMAL HEAT	190
	Enthalpy			Geothermal Resources	
	Properties of Real Substances			Problems with Geothermal Energy	
	The Rankine Cycle		6.3	SOLAR HEAT	199
	Gas Turbines			Insolation	
4.3	EXTERNAL COMBUSTION ENGINES	108		Radiation	
4.4	REFRIGERATION	111		The Power Tower	
	The Refrigeration Cycle			Solar Power Farms	
	Heat Pumps			Solar Sea Power	
				Domestic Applications	
CHAPTER 5	DIRECT CONVERSION PROCESSES	123	CHAPTER 7	NUCLEAR POWER	229
5.1	CHEMICAL CONVERSION	123	7.1	INTRODUCTION	229
	Batteries			Nuclear Power Policy	
	High-Performance Batteries			Fission	
	Fuel Cells			Classification of Reactors	
	Efficiency of Electrochemical Conversion		7.2	THERMAL FISSION REACTORS	234
5.2	PHOTOVOLTAIC CONVERSION	134		Multiplication Factor	
	Solar Radiation			Neutron Physics	
	Some Solid-State Physics			Reactor Control	
	Solar Cells			Commercial Power Reactors	
5.3	MAGNETO HYDRODYNAMICS	145	7.3	BREEDER REACTORS	250
5.4	WIND POWER	151		Physics of Breeding	
	Physics of Wind Machines			Fast Reactor Parameters	
	Wind Power Potential			Fast Reactor Control	
				Current Breeder Reactor Designs	
			7.4	REACTOR SAFETY	261
				Safety Assurance	
				Safety History	

7.5 THE NUCLEAR FUEL CYCLE	270	High-Voltage Transmission Superconducting Systems Underground Electric Power Transmission	
Mining and Milling			
Enrichment			
Closing the Cycle			
7.6 THERMONUCLEAR FUSION	292	9.3 TRANSMISSION OF FLUIDS	360
Physics of Fusion		Tanker Transport	
Magnetic Confinement		Pipelines	
Inertial Confinement		Trans-Alaska Pipeline	
CHAPTER 8 WASTE HEAT MANAGEMENT	309	CHAPTER 10 ENERGY STORAGE	371
8.1 THERMAL EFFECTS	309	10.1 ENERGY STORAGE ALTERNATIVES	372
Effects of Heat on Water Quality			
Effects of Heat on Aquatic Life		10.2 MECHANICAL ENERGY STORAGE	374
8.2 DISPERSAL OF HEAT	313	Pumped Hydrostorage	
Heat on the Microscopic Scale		Compressed Gases	
Heat-Transfer Mechanisms		Flywheels	
Once-Through Cooling		10.3 CHEMICAL ENERGY STORAGE	380
Cooling Towers		Reversible Reactions	
8.3 USEFUL APPLICATIONS OF WASTE HEAT	326	Hydrogen	
Heat Quality		10.4 ELECTRICAL ENERGY STORAGE	382
Transportation of Heat		Electrostatic Energy Storage	
Desalination		Inductive Energy Storage	
Total Energy		10.5 THERMAL ENERGY STORAGE	386
8.4 MINIMIZING WASTE HEAT PRODUCTION	332	Sensible Heat	
Topping Cycles		Latent Heat Energy Storage	
Tailing Cycles		CHAPTER 11 EFFICIENCY IN ENERGY USE	393
PART 4 ENERGY UTILIZATION			
CHAPTER 9 ENERGY TRANSMISSION	341	11.1 DOMESTIC AND COMMERCIAL ENERGY CONSERVATION	395
9.1 ENERGY TRANSMISSION ALTERNATIVES	341	Policy Influences	
Criteria for Selection		Construction	
9.2 ELECTRICAL ENERGY TRANSMISSION	343	Operation	
Review of Fundamentals		11.2 INDUSTRIAL ENERGY CONSERVATION	408
AC Power Transmission		Industrial Processes	
		Recycling	

11.3	TRANSPORTATION	412		
	Aspects of the Transport Problem			Oxides of Sulfur
	Traffic Flow			Oxides of Nitrogen
	Mass-Transit Systems			Indoor Air Pollution
	Automobiles			
PART 5	ENVIRONMENTAL		13.3	SECONDARY AIR POLLUTION
	DEGRADATION			490
				Temperature Inversions
				Photochemical Reactions
CHAPTER 12	GLOBAL ENERGY	437	13.4	AIR POLLUTION CONTROLS
	BALANCE			495
				Control Techniques
				Air Pollution Trends
12.1	NATURAL ENERGY SOURCES	437	CHAPTER 14	ENVIRONMENTAL
	AND SINKS			RADIATION
	Energy Sources			
	Energy Sinks		14.1	THE INTERACTION OF
12.2	MECHANISM FOR RADIATION	444		RADIATION WITH MATTER
	SINKS			504
	Absorption			Nature of Radiation
	Scattering			Energy Loss Mechanisms
12.3	THE EARTH'S HEAT ENGINES	450		Radiation Chemistry
	Air Currents		14.2	RADIATION UNITS
	Ocean Currents			514
12.4	MANKIND'S EFFECTS	456		Activity
	Heat Production			Exposure
	Particulate Production			Absorbed Dose
	Production of Gases			Dose Equivalent
	Stratospheric Ozone		14.3	THE RADIATION BACKGROUND
CHAPTER 13	LOCAL CLIMATIC	474		517
	EFFECTS			Solar Flux
				Naturally Occurring Radioisotopes
13.1	MICROCLIMATE CHANGES	474		Man-Made Radiation
	The Climate of Cities		14.4	RADIATION EFFECTS
	Metropolitan Influences on Rural			521
	Climate			Somatic Effects
				Genetic Effects
13.2	PRIMARY AIR POLLUTANTS	482		Low Levels of Radiation
	Carbon Monoxide		14.5	RADIATION STANDARDS
	Hydrocarbons			530
	Total Suspended Particulates			Current Standards
				Benefit versus Risk
			GLOSSARY	543
			APPENDIX A	UNITS OF MEASURE
				554
			APPENDIX B	THERMODYNAMIC
				557
				PROPERTIES OF
				STEAM AND AMMONIA
			INDEX	567
