Preface	VII
<b>1. Introduction to Electrochemical Reactors</b>	
by F.R. McLarnon, E.J. Cairns and M.I. Ismail	1
1.1 Fundamental principles	
1.1.1 Thermodynamics	2
1.1.2 Kinetics	2
1.1.3 Transport phenomena	2
1.1.4 Metallurgy and materials science	3
1.1.5 Conservation laws	3
1.2 Electrochemical reactor design	3
1.2.1 Selection of reactants	3
1.2.2 Electrode selection	4
1.2.3 Electrolyte selection	4
1.2.4 Separator selection	4
1.2.5 Electrochemical cell design	4
1.2.6 Other cell components	5
1.2.7 Cell performance	5
1.2.8 System integration	5
1.2.9 Another major class of ECRs	5
1.3 Future trends	7
References	7
<b>2. Fundamentals of Electrochemical Reactors</b>	
by I. Roušar	9
2.1 Introduction	9
2.2 Thermodynamic relations for charged interfaces	10
2.3 Electromotive force, electrode potential, and overpotential	13
2.4 Terminal voltage of electrolyser	18
2.5 Transport processes in electrolyte solutions	21
2.6 Faraday's law	26
Conclusions	27
References	28
<b>3. Fundamentals of Electrode Kinetics</b>	
by H. Kita and A. Aramata	29
3.1 Electrode processes and their elementary steps	29
3.1.1 Electrode processes	29
3.1.2 Reaction velocity and current	30
3.1.3 Rate expression of the elementary step	32

3.2	Discharge-controlled reaction	35
3.3	Chemical step-controlled reaction	37
3.4	Diffusion-controlled process	39
3.4.1	Non steady state	39
3.4.2	Steady state	43
3.5	Experimental determination of kinetic parameters	45
3.5.1	Tafel constant	45
3.5.2	Reaction order	46
3.5.3	Exchange current density	48
3.5.4	Polarization resistance at equilibrium	48
3.5.5	Stoichiometric number	48
3.6	Classification of Experimental methods for the determination of kinetic parameters	49
3.6.1	Steady method	50
3.6.2	Non-steady method	50
	Conclusions	51
	References	51
	Glossary of Symbols	52
4.	<b>Design Concepts in Electrochemical Processes Engineering</b>	
	by F. Hine and M.I. Ismail	54
4.1	Introduction	54
4.2	Electrolyser design concepts	57
4.3	Energy saving	65
4.4	Electrochemical reactor selection	72
4.5	Design pitfalls and unsuccessful scale-up	75
4.6	Industrial electrolyser types	78
4.7	Health and safety aspects of electrochemical reactors	81
4.7.1	General safety aspects	81
4.7.2	Specific safety aspects	83
4.8	Present and future status	85
	Conclusions	87
	References	87
5.	<b>Heat and Mass Transfer</b>	
	by L.W. Shemilt	92
5.1	Basis for transfer phenomena	92
5.1.1	Categories	92
5.1.2	Basic molecular transport equations	92
5.1.3	Flow and momentum considerations	93
5.1.4	Transport under turbulent flow conditions	94
5.2	Elements of ionic transfer	94
5.2.1	Basic description	94
5.2.2	Ionic flux equations	95
5.2.3	Ionic transfer in multicomponent solutions without convection	96
5.2.4	Convective mass transfer equation	97

5.3	Mass transfer in electrochemical reactors	97
5.3.1	Correlations and models	97
5.3.2	Analogies	99
5.4	Heat transfer	107
5.4.1	Total energy balance	107
5.4.2	Natural and forced convection	108
5.4.3	Analogies	111
5.5	Combined heat and mass transfer	111
	Concluding comments	111
	References	112
6.	<b>Traditional Problems with Electrochemical Reactors</b>	
	by M. I. Ismail, F. Hine and H. Vogt	114
6.1	Selectivity of electrolysis products	114
6.2	Interface problems	115
6.3	Electrodes and process problems	115
6.3.1	Mechanical failure of anodes	115
6.3.2	Anode failure due to chemical corrosion	117
6.3.3	Anode failure due to electrochemical corrosion	118
6.3.4	Anode failure due to metallurgical factors	120
6.3.5	Anode failure due to microbial factors	121
6.3.6	Failure of cathodes	121
6.4	Problems with gas evolution	124
6.4.1	Gas bubble effects	125
6.4.2	Gas evolution efficiency	127
6.4.3	Nucleation, bubble growth, and departure	129
6.4.4	Mass transfer	131
6.4.5	Heat transfer	134
6.5	Electric conductivity of gas-electrolyte dispersions	134
	Conclusions	139
	References	139
7.	<b>Electrodes</b>	
	by S.L. Marchiano and A.J. Arvia	145
7.1	Introduction	145
7.1.1	The electrochemical reactor	145
7.1.2	Unit cells and the electrochemical reactor	147
7.1.3	Classification of electrodes for electrochemical reactor design	149
7.1.4	Choice of electrode design	151
7.2	Aspects of electrocatalysis of interest to electrochemical cell design	151
7.2.1	Type of electrodes and cell design	152
7.2.2	Electrodes for electrochemical production of substances	153
7.2.3	Electrode materials in organic electrosynthesis	153
7.2.4	Electrodes in fuel cell technology	155
7.2.5	The electrolytic decomposition of water	155

7.3	Current distribution	156
7.3.1	Current distribution at electrodes	156
7.3.1.1	Primary and secondary current distributions	157
7.3.1.2	Tertiary current distribution	161
7.3.1.3	Electrode resistance: terminal effects	162
7.4	Bubble formation and electrode design	165
7.4.1	Influence of bubbles on the electrolyte resistance	166
7.4.2	Influence of bubbles on the rate of mass transfer	167
7.4.2.1	Penetration model	168
7.4.2.2	Hydrodynamic model	168
7.4.2.3	Microconvective model	168
7.4.2.4	Superposition of liquid motions	169
7.5	Mass transfer at electrodes	169
7.5.1	Mass transfer at electrodes under forced convection	171
7.5.2	Electrodes under free convection	174
7.6	Different types of electrodes	175
7.6.1	Compact electrodes	175
7.6.2	Three-dimensional electrodes	176
7.6.3	Porous electrodes	180
7.7	Outlines concerning optimization	181
	Conclusions	182
	References	183
	Nomenclature	187
	Dimensionless numbers	188
<b>8.</b>	<b>Electrolytes</b>	
	by M.I. Ismail, S.P. Sinha and B.E. Conway	189
8.1	Introduction	189
8.2	Liquid electrolytes	190
8.2.1	Inorganic electrolytes	190
8.2.2	Organic electrolytes	190
8.3	Molten electrolytes	191
8.4	Ambient temperature molten electrolytes	191
8.5	Physicochemical characteristics of electrolytes	192
8.6	Electrolyte additives	197
8.7	Solid electrolytes	198
8.7.1	Classification and general properties	198
8.7.2	Silver ion electrolytes	199
8.7.3	Oxide ion electrolytes	199
8.7.4	Beta alumina	199
8.7.5	Cubic univalent conducting sulphates	200
8.7.6	Inorganic/organic solid salt solutions	200
8.7.7	Solid polymer electrolytes (SPE)	201
8.8	Principles of selection of solid electrolytes	201
8.9	Areas of application of solid electrolytes	202

8.10	Guide to studies of solid electrolytes	202
	Conclusions	204
	References	204
<b>9.</b>	<b>Separators</b>	
	by V.K. Kadija and D.N. Bennion	210
9.1	Classification of separators	210
9.2	Hydrodynamics and electrochemical phenomena in diaphragms and membranes	213
9.2.1	Hydrodynamics of Diaphragms	213
	(i) Flow through porous media	213
	(ii) Filtration phenomena pertinent to separators	215
	(iii) Boundary layer relevance to separator performance	217
	(iv) Electric field and ionic migration across the separator	219
	(v) Gels, impurities and dynamics of colloids	220
9.2.2	Steady state transport phenomena in asbestos and other diaphragms	222
	(i) Ion exchange properties - A requirement for a satisfactory diaphragm	224
	(ii) pH of the anolyte side of the diaphragm	226
	(iii) physicochemical changes across the separator	228
9.2.3	Transport of ions through membranes	230
9.2.4	Membrane performance	235
9.3	Composite structures	237
9.3.1	Supported and self-supported diaphragms	237
9.3.2	Electrode diaphragm system	238
	(i) Porous Anode Diaphragm	238
	(ii) Reticulated Electrode Diaphragm	239
9.3.3	Composite membranes	240
9.3.4	Electrode-membrane-electrode system	241
9.4	Separator selection	243
	References	246
<b>10.</b>	<b>Commercially Available Materials for Electrolyzer Construction</b>	
	by H. Wendt	248
10.1	Introduction	248
10.2	Metallic materials	249
10.2.1	General considerations	249
10.2.2	Steels, their metallurgical composition and corrosion behaviour	251
10.2.3	Nickel and nickel alloys	259
10.2.4	Titanium, zirconium, hafnium	261
10.2.5	Lead	262
10.2.6	Carbon and carbonaceous materials	263
10.3	Electrode materials	265

10.4	Diaphragms and membranes	268
10.5	Polymeric materials	269
10.6	Gaskets	272
	Conclusion	273
	References	274
11.	<b>Fluid Transport in Electrochemical Reactor Systems</b>	
	by N. Midoux and A. Storck	275
11.1	Introduction	275
11.2	Forces governing flow, flow regimes	276
11.3	Material and energy balances	278
11.4	Dimensional analysis, similarity criteria	279
	11.4.1 Application of dimensional analysis for representation purposes of experimental results	279
	11.4.2 The concept of similarity	281
11.5	Energy losses due to friction: velocity profiles	282
	11.5.1 Energy losses due to friction against the wall of cylindrical conduits: circular flow cross-section	282
	11.5.2 Velocity profiles in cylindrical conduits	283
	11.5.3 Energy losses due to friction against the walls of cylindrical conduits: non-circular flow cross-section	284
	11.5.4 Energy losses due to flow singularities	285
11.6	Choosing a pump in a line	286
	11.6.1 Characteristic parameters	286
	11.6.2 Total dynamic head and net positive suction head (NPSH)	287
	11.6.3 Operating point of the pump system	288
	11.6.4 Factors for the choice of a pump	289
11.7	Flow around objects and through porous media	290
	11.7.1 Concept of the boundary layer, flow on a flat plate	290
	11.7.2 Streamlined obstacles, drag coefficient	291
	11.7.3 Terminal velocity during free fall of a spherical particle initially suspended in a fluid	292
	11.7.4 Flow through stationary porous media	294
	11.7.5 Fluidised beds	295
11.8	Gas-liquid flow in electrochemical reactors	296
	11.8.1 Rising terminal velocity of a single bubble	296
	11.8.2 Rising terminal velocity of a swarm of bubbles	297
11.9	Analogies between the phenomena of mass, heat and momentum transfer	302
	11.9.1 Demonstration of the existence of an analogy on the basis of transport laws	302
	11.9.2 Conservation laws for the extensive properties in an electrolyte	304
	11.9.3 Apparent transfer conductances	305

11.9.3.1	General definitions	305
11.9.3.2	Special case of mass transfer by diffusion with limited current density	306
11.9.4	Characteristic dimensionless groups	307
11.9.4.1	Local transport effectiveness	307
11.9.4.2	Equivalent molecular transport, Nusselt numbers	308
11.9.4.3	Other important characteristic dimensionless groups	309
11.9.5	Transport analogies in laminar flow, diffusional boundary layer on a flat plate	310
11.9.6	Transport analogies in the turbulent regime	313
11.9.6.1	Introduction	313
11.9.6.2	Layer models of turbulence	314
	a) Reynolds' analogy	315
	b) Taylor and Prandtl's analogy	315
	c) Von Karman's analogy	315
	d) Lin, Moulton and Putnam's analogy	316
11.9.6.3	Analogies for turbulent continua	317
11.9.6.4	Analogous models based on surface renewal	317
11.9.6.5	Semi-empirical analogies	320
11.10	Experimental methods and results	321
11.10.1	Experimental determination of the parameters $\bar{K}_d$ and $K_d$ and the velocity gradient at an electrode	321
11.10.1.1	Introduction	321
11.10.1.2	Local mass transfer and local friction	322
11.10.2	Examples of experimental results for mass and momentum transfer in various geometrical configurations	323
11.10.3	Aspects of the energy efficiency of mass transfer between an electrode and an electrolyte	324
	References	328
Appendix,	Moody Chart	332
	List of main dimensionless groups	333
	Mass transfer and pressure drop correlations	336
	Energy efficiency of mass transfer	338
	Nomenclature	340
<b>12.</b>	<b>Control Systems</b>	
	by H. Unbehauen and I. Alatiqi	344
12.1	Basic principles of automatic control	344
12.1.1	Some definitions	344
12.1.2	Higher control principles	345
12.2	Dynamic process behaviour	347
12.2.1	Time behaviour	347
12.2.2	Transform behaviour	348
12.2.3	State-space representation	350
12.2.4	Plant identification	351

12.3	Controller design	351
12.3.1	Stability problem	351
12.3.2	Conventional controllers	352
12.3.3	Cascade control systems	353
12.3.4	Override (protective) control systems	353
12.3.5	Multivariable control systems	354
12.4	Control of electrochemical reactors	356
12.4.1	Basic reactor types	356
12.4.2	Control problems	357
12.4.2.1	Temperature control	358
12.4.2.2	Flowrate control	359
12.4.2.3	Control of electrode position	359
12.4.2.4	Control of voltage and electrical current	359
	(a) Potentiostatic operation	359
	(b) Galvanostatic operation	360
12.4.3	Aspects of process dynamics	360
12.4.4	Application of modern decentralised control systems	361
	Conclusions	362
	References	364
13.	<b>Process Control Systems in Electrochemical Engineering</b> by B. Fleet, and C.E. Small	365
13.1	Introduction	365
13.1.1	Process control in electrochemical technology	365
13.1.2	Advances in electrochemical technology	366
13.1.3	Advances in process control	367
13.1.4	Process control parameters in electrochemical engineering	369
13.1.5	Safety and environmental factors	370
13.2	Reactor control	370
13.2.1	The electrode process	370
13.2.2	Electrode potential control	371
13.2.3	Voltage control	372
13.2.4	Constant current control	373
13.2.5	Mass transfer	374
