Preface xxxv

Measuring Energy xxxviii

1 Overview 1

Moderating Demand Growth 5

A Word About the Study's Projections 6

The Economic Effects of Moderating Energy Consumption 11

Domestic Energy Supplies for the Near Term 14

Domestic Oil and Gas 17

Prospects for Coal 19

Prospects for Nuclear Power 24

Uranium Resources 25

Alternative Fuel Cycles and Advanced Reactors 26

The Demand for Electricity 31

Nuclear Weapons Proliferation and Breeder Development 32

Management of Radioactive Wastes 34

Public Appraisal of Nuclear Power 36

Indefinitely Sustainable Energy Sources 37

The Breeder Reactor 38

Solar Energy 39

Direct Thermal Use of Solar Energy 39

Solar-Generated Electricity 40

<i>Fluid Fuels</i>	42
<i>Some Institutional Issues</i>	43
Geothermal Energy	46
Controlled Thermonuclear Fusion	46
Risks of Energy Systems	48
Routine Industrial Accidents and Disease	50
Emissions	51
Large-Scale Accidents and Sabotage	53
Management of Waste	55
Ecosystem Effects	55
Water Supply Problems	56
Climate	57
Sociopolitical Issues	58
Some General Conclusions on Risk	59
<i>Conservation</i>	59
<i>Fossil Fuels</i>	60
<i>Nuclear Power</i>	60
<i>Solar Energy</i>	61
<i>Public Appraisal of Energy Systems</i>	61
International Aspects of the Energy Problem	62
Consequences of Action on National Energy Policies	64
The Developing Countries and the World Financial Systems	66
Summary	68
Notes	72
 2 Slowing the Growth of Energy Consumption	 75
Determinants of Energy Demand	76
Energy Prices and Externalities	78
The Role of Mandatory Standards	79
Demand and Conservation Panel Results	79
Transportation	84
<i>Automobiles</i>	85
<i>Air Travel</i>	86
<i>Truck and Rail Freight</i>	86
<i>Energy Demand Projections for Transportation in 2010</i>	87
Buildings and Appliances	90

*Energy Demand Projections for Buildings
and Appliances in 2010* 92

Industry 96

Energy Demand Projections for Industry in 2010 99

To What Degree Will Moderating the Consumption
of Energy Affect the National Economy? 102

The Influence of GNP on Energy Use 102

The Historical Trends 104

Composition of National Output 104

Thermal Efficiency of Energy Use 104

Composition of Energy Consumption 106

The Behavior of Prices 107

Some General Conclusions About the Historical Record 107

International Comparisons 107

Transportation 109

Industry 109

Households 109

Implications 110

Econometric Studies by the Modeling Resource Group 110

Limitations of the Modeling Resource Group Results 113

Research and Development for Energy Conservation 115

Conclusions and Recommendations 116

Policy Recommendations 121

Appendix: A Word About GNP 123

Notes 125

3 Oil and Gas Supply 128

Domestic Oil and Gas Producibility 129

Resources and Reserves 129

Projections of Future Domestic Production 130

Business-as-Usual Scenario 132

Moderately Enhanced Conditions Scenario 132

National-Commitment Scenario 132

Oil 134

Future Availability of Imports 134

Could the World Oil Situation Improve? 136

Conclusions on Oil Imports 137

Oil Shale	138
Coal-Derived Synthetic Liquid Fuels	139
Projections of Total Domestic Liquid Fuel Production	140
Gas	140
Imports	141
Natural Gas in Unconventional Formations	142
Synthetic Gas	143
The Outlook for Oil and Gas in the Intermediate Term	143
Notes	144

4 Coal 146

Introduction	146
Resources	149
Rank and Quality	149
Distribution of Resources	153
Distribution of Production	155
Consumption	158
Introduction	158
Electricity Generation from Coal	161
<i>Air Pollution Regulation and Control</i>	162
<i>Advanced Technologies for Coal Combustion</i>	168
Synthetic Gas from Coal	173
<i>Low- and Medium-Btu Gas</i>	174
<i>High-Btu Gas</i>	175
<i>Underground Coal Gasification</i>	176
<i>Product Costs</i>	176
<i>Research and Development Priorities</i>	177
Liquid Fuels from Coal	178
<i>Product Costs</i>	180
<i>Refining</i>	181
<i>Pollution Problems</i>	181
<i>Research and Development Priorities</i>	182
Coal for Industrial Process Heat	182
Coal as a Chemical Feedstock	184
Coke Production	185

Production	185
Introduction	185
Labor Force	186
Mining Technology	190
<i>Underground Mining</i>	190
<i>Surface Mining</i>	191
Federal Leasing Policy	192
Industry Structure	193
Transportation	195
Water Supply as a Limiting Factor	197
Precipitation, Runoff, and Consumption	197
Projected Water Consumption	198
Estimating Permissible Consumption Levels	200
General Conclusions	204
Notes	206
 5 Nuclear Power	 210
Summary	211
Conclusions	220
Recommendations	222
Nuclear Growth Rates and the Effect of Reactor Types on Demand for Uranium	225
Nuclear Growth Scenarios, Uranium Requirements, and Reactor Types	226
Availability of Uranium	227
Uranium Enrichment	235
Nuclear Reactors and Fuel Cycles	239
Advanced Reactors	241
Advanced Converter Designs	245
Evaluation of Advanced Converters	246
Economic Prospects	247
Flexibility	250
Development Status of Various Concepts	253
Breeders Versus Advanced Converters	256
Conclusions and Recommendations: Advanced Converters and Breeders	258

Domestic Issues in the Future of Nuclear Power	260
Public Appraisal of Nuclear Power	260
Costs of Nuclear Power	262
<i>Capital Costs</i>	264
<i>Cost Escalation</i>	265
<i>Capacity Factors</i>	266
<i>Nuclear Fuel Cycle Costs</i>	267
<i>Add-On Costs</i>	271
<i>Risk Costs</i>	272
<i>LMFBR Costs</i>	273
<i>Summary of Costs</i>	275
Regulation of Nuclear Power Plants	278
Safety of Nuclear Reactors and Their Fuel Cycles	279
<i>Conclusions and Recommendations</i>	294
Management of Radioactive Waste	296
<i>What Is the Required Isolation?</i>	297
<i>Types of Radioactive Waste</i>	298
<i>Treatment of Radioactive Waste for Disposal</i>	307
<i>Discussion</i>	315
<i>Conclusions and Recommendations</i>	317
Safeguarding the Domestic Fuel Cycle	318
Reprocessing	319
<i>Radioactivity of Reprocessed Fuel</i>	320
Reprocessing Alternatives: Denaturing Uranium-233, Civex for Plutonium, and Other Devices	321
Hijacking and Theft in Storage and Shipment	324
Conclusions	325
Nuclear Power and Proliferation of Nuclear Weapons	326
Is Proliferation Very Important?	327
Is the Link Between Nuclear Power and Proliferation Very Important?	328
Is the Influence of the Position of the United States on Nuclear Power Very Important?	331
What Should the United States Do?	334
<i>Motivations</i>	334
Conclusions	337
Notes	338

6 Solar Energy 345

Solar Energy Scenarios 348

Low-Solar-Energy Scenario 348

High-Solar-Energy Scenario 348

Heating and Cooling by Solar Energy 349

Solar Electricity 349

Use of Biomass for Fuels 350

The Role of Research and Development 352

Direct Use of Solar Heat 352

Water Heating 354

Space Heating and Cooling 355

Active Solar Space Heating 355

Solar Space Cooling 357

Impact on Utilities 358

Industrial Process Heat 358

Active and Passive Solar Energy Systems
and Energy-Conserving Building Design 359

Retrofitting for Solar Heating 362

Solar Electricity Generation 364

Solar Thermal Conversion 365

Environmental, Health, and Social Considerations 366

Photovoltaic Conversion 368

Environmental and Health Considerations 369

Wind Energy Conversion 369

Environmental Considerations 370

Ocean Thermal Energy Conversion 371

Environmental Considerations 371

Solar Energy Systems in Space 372

Solar Fuel Production 373

Energy from Biomass 374

Municipal Wastes 374

Agricultural Wastes 375

Growth of Biomass for Energy 376

Photochemical, Thermochemical, and Electrolytic
Conversion 378

Photochemical Conversion 378

	<i>Thermochemical Conversion</i>	380
	<i>Electrolytic Conversion</i>	380
	Conclusions	380
	Notes	382
7	Controlled Nuclear Fusion	385
	The Fusion Reaction	386
	Fusion Fuel Cycles and the Environment	386
	Creating the Conditions for Fusion: Heat and Confinement	389
	Magnetic Confinement	389
	Inertial Confinement	390
	Timetable for Development and Criteria for Deployment	393
	The Program	395
	Conclusions	396
	Notes	396
8	Geothermal Energy	397
	Geothermal Resource Types	398
	Hot Water Reservoirs	398
	Natural Steam Reservoirs	399
	Geopressured Reservoirs	399
	Normal Geothermal Gradient and Hot-Dry-Rock Resources	399
	Molten Magma	400
	Estimated Heat Contents and Producibility	400
	Technical and Environmental Considerations	402
	Hot Water Reservoirs	402
	<i>Energy Content</i>	403
	<i>Environmental Considerations</i>	403
	Natural Steam Reservoirs	403
	<i>Energy Content</i>	404

<i>Environmental Considerations</i>	404
Geopressured Reservoirs	405
<i>Energy Content</i>	405
<i>Environmental Considerations</i>	406
Hot Dry Rock	406
<i>Energy Content</i>	407
<i>Environmental Considerations</i>	407
Normal-Gradient Geothermal Heat	408
<i>Energy Content</i>	408
<i>Environmental Considerations</i>	409
Molten Magma	409
<i>Energy Content</i>	409
<i>Environmental Considerations</i>	409
Production Costs	410
Natural Steam	410
Hot Water Reservoirs	412
Geopressured Reservoirs	413
Hot Dry Rock	414
Normal-Gradient Systems	415
Molten Magma	415
Future Development of the Geothermal Resource	416
Institutional Problems	416
Future Trends in Geothermal Energy Production	417
Conclusions on Geothermal Energy	417
Notes	419

9 Risks of Energy Systems 422

Risk 423

Assessment of Total Risk 424

Regulation 424

Administrative and Legal Aspects 425

Practical Aspects 425

Health 427

Routine Industrial Risks 428

Fatal Accidents 428

Nonfatal Accidents and Occupational Disease 430

Public Health Risks	432
<i>Epidemiological Methods</i>	432
<i>Estimating Health Risks</i>	436
<i>Fission</i>	438
<i>Combustion</i>	448
Catastrophes	459
Agriculture and Plant Life	463
Water and Climate	467
Acid Precipitation	467
Global Climate	470
Water Supply	473
Ecosystems	475
Hydroelectric Power	476
Geothermal Energy	476
Solar Power	477
Coal	479
Oil	480
Natural Gas	480
Shale Oil and Coal-Derived Synthetic Fuels	480
Nuclear Power	481
Discussion	481
Limitations in Risk Assessment	481
Perception of Risk	482
Regulation	483
Social and Political Risks	484
Conclusions	485
1. Limits of Risk Control	485
2. Conservation	486
3. Fossil Fuels	486
4. Carbon Dioxide	487
5. Nuclear Power	487
6. Water Supply	488
7. Solar Energy	488
8. Air Quality Standards and Research	489
9. Public Appraisal of Energy Systems	490
Notes	490

10 U.S. Energy Policy in the Global Economic Context	500
The Rise in Oil and Gas, 1960–1973	500
The Oil Price Rise of 1973–1974	505
Reactions to Higher Oil Prices	508
Energy Resources and Their Discovery	511
The Development of World Oil Reserves	515
World Uranium Resources	518
Long-Range Perspectives on World Energy Flows	520
Consequences of Action on National Energy Policies	523
The Developing Countries and the World Financial System	525
Notes	527
11 Methods and Analysis of Study Projections	529
Analysis and Scenarios	534
Work of the Demand and Conservation Panel	534
<i>Population Growth</i>	534
<i>Work-Force Participation and Other Trends</i>	535
<i>Growth of GNP</i>	535
<i>Energy Prices</i>	539
<i>Other Assumptions</i>	540
<i>Methodology</i>	544
<i>Demand for Electricity</i>	557
<i>Minimum Energy-Use Scenario (CLOP)</i>	557
<i>Total Primary Energy Use</i>	559
Work of the Supply and Delivery Panel	559
<i>Maximum-Solar Scenario</i>	562
<i>CONAES Projections of Supply Versus Other Projections</i>	562
Implications of Study Results: Comparisons of Supply and Demand	566
The Study Scenarios	568
<i>Nuclear Power</i>	570

	<i>Electricity</i>	571
	<i>Liquid and Gaseous Fuels</i>	583
	Discussion of Study Scenarios	585
	<i>Characteristics of the Scenarios</i>	585
	<i>Comparison with Projections of Other Energy Studies</i>	588
	Work of the Modeling Resource Group	593
	<i>Growth Rate of Real Gross National Product</i>	599
	<i>Feedback from Energy Use to GNP</i>	601
	<i>Estimates of the Feedback from Energy Consumption to Real Income</i>	602
	Discussion	608
	Notes	609
Appendix A	Individual Statements by CONAES Members	613
Appendix B	Glossary of Technical Terms	643
Appendix C	Resource Groups, Consultants, and Contributors	649
Appendix D	Publications of the CONAES Study	655
Index		657
