

CONTENTS

Preface	ix
Introduction	xi
Organizing Committee	xiii
Lecturers and Students	xv
Section 1. FUNDAMENTALS OF ENERGY RESOURCES AND CONSUMPTION	
The Energy Problem and the Earth's Fuel Situation <i>G. R. Bainbridge</i>	3
Energy Demand and Supply in the United Kingdom <i>R. J. Eden</i>	29
Energy Consumption and Conservation in the United States <i>J. E. Rothberg</i>	49
Energy Use in Industry <i>G. E. H. Newton</i>	111
Domestic Energy Use and Energy Conservation in Buildings <i>S. J. Leach</i>	137
Energy Use in Agriculture <i>D. J. White</i>	141
Thermodynamics and Energy <i>N. Kurti</i>	177
Section 2. FOSSIL FUELS	
Energy and the Coal Industry <i>J. S. Harrison</i>	187
Energy and the Oil Industry <i>P. J. Garner</i>	201
Energy and the Gas Industry <i>J. A. Gray</i>	217
Sulphur Pollution and Emission Charges <i>R. Wilson</i>	239
Panel Discussion: The Prospects for Fossil Fuels	267
Section 3. NUCLEAR FUELS	
Fission Reactors <i>D. C. Leslie</i>	275
Fast Breeder Reactors <i>W. B. Dale</i>	297

The Nuclear Power Controversy in the U.S.A. <i>R. Wilson</i>	313
Fusion Power <i>K. V. Roberts</i>	343
Panel Discussion: The Prospects for Nuclear Power	375
 Section 4. ALTERNATIVE ENERGY SOURCES	
Geothermal Energy <i>E. R. Oxburgh</i>	385
The Atmosphere and the Oceans as Energy Sources <i>D. T. Swift-Hook</i>	405
Solar Energy <i>B. J. Brinkworth</i>	431
Energy from Wastes <i>W. Sabel</i>	449
 Section 5. TRANSMISSION AND STORAGE OF ENERGY	
Large-scale Electrical Power Generation and Storage <i>J. K. Wright</i>	461
Electric Power Transmission <i>W. T. Norris</i>	487
Energy Storage <i>I. E. Smith</i>	507
The Hydrogen Economy <i>J. K. Dawson</i>	519
Panel Discussion: Energy Transmission and Storage	529
 Section 6. POSSIBLE DEVELOPMENTS IN ENERGY USE	
Possible Developments in Transportation <i>S. S. Wilson</i>	537
The Influence of Energy Use on Future Industrial Processes <i>M. E. Hadlow and B. Buss</i>	553
Total Energy Systems <i>C. M. D. Peters</i>	587
The Autonomous House Experiment <i>J. G. F. Littler</i>	609
Energy and the Developing Countries <i>P. D. Dunn</i>	621
 Section 7. ENVIRONMENTAL AND SOCIO-ECONOMIC ASPECTS OF ENERGY USE	
Environmental Aspects of Energy Conversion and Use <i>C-G. Ducret</i>	645

Radioactive Waste Management, Reactor Safety and Siting <i>E. C. Williams</i>	661
Economics of Resource Use <i>D. L. Munby</i>	681
Energy and Social Economics <i>M. Gaskin</i>	689
Panel Discussion: Social and Environmental Limits to Growth	709
Section 8. ENERGY ANALYSIS	
Principles of Energy Analysis <i>P. F. Chapman</i>	715
Methods of Energy Analysis <i>P. F. Chapman</i>	739
Energy Analysis in Modelling <i>P. C. Roberts</i>	759
Analysis of Selected Energy Systems <i>F. Roberts</i>	773
Panel Discussion: Implications of Energy Analysis	795
Section 9. CONCLUDING PAPERS	
Energy Conservation and Government Influence on Energy Use <i>Lord Balogh</i>	803
Energy Sources for the Future and Their Effective Utilization <i>B. T. Feld</i>	813
Epilogue <i>I. M. Blair</i>	821
Appendix STUDENT CONTRIBUTIONS	
<i>B. R. Clayton</i>	825
<i>R. Critoph</i>	826
<i>H. L. Liddell</i> (Design for an Alternative Technology)	827
<i>H. L. Liddell</i> (Design with Nature)	831
<i>G. D. Madeley</i> (Energy Scenarios: Effects of Uncertainty)	838
<i>W. R. Stewart</i>	841
Index	843
