

THE PROCEEDINGS

CONTENTS

PAPERS PRESENTED AND TRANSCRIPT OF DISCUSSIONS

	PAGE
List of Participants and Addresses	
<i>Opening Address</i> Sir Mark Oliphant, KBE, FRS, FAA	1
<i>Energy Storage Systems Rationale and Methodology - An Overview</i> S Kaneff	3
<u>THE ANU HOMOPOLAR GENERATOR FACILITY</u>	
<i>Specifications and Performance of the ANU-HPG</i> J W Blamey	14
<i>The ANU-LT4 Energy Supply System</i> A H Morton	37
<i>Operation of the LT4-HPG System and the Characteristics of the Plasma</i> M G Bell	43
<i>The Rail Gun Installation</i> R A Marshall	49
<i>Powering Laser Flash Lamps from a Storage Inductor</i> E K Inall	60
<i>The 30T Magnet - Design and Operating Results</i> P O Carden	65
<i>Discussion on the Design of the ANU-HPG</i> Chairman and Editor: E K Inall	71
<u>ENERGY STORAGE IN ROTATING MACHINES AND INDUCTORS</u>	
<i>Evolution of Energy Storage in Rotating Machines</i> G H Newstead	84
<i>Homopolar Generator Development</i> W F Weldon, H G Rylander, H H Woodson	86
<i>Design Trends in Homopolar Machines since the mid 1960's</i> C J Mole and E Mullan	96
<i>An Inertial-Inductive Energy Storage System</i> A E Robson	113
<i>The Westinghouse Short-Circuit Test Alternator</i> C J Mole	129

	PAGE
<i>A Model Air Supported Drum-Type Homopolar Generator</i> R L Kustom, R E Fuja, R B Wehrle, R P Smith, T J Kovarik	135
<i>Pulsed Energy Storage and Switching at LASL</i> K Thomassen	145
<i>The Importance of the Velocity of Propagation of a Normal Zone to the Protection of Large Superconducting Windings</i> G W Donaldson and T C Chilcott	151
<u>RESEARCH AND DEVELOPMENT OF ROTATING MACHINES</u>	
<i>Design of a 10 MJ Fast Discharging Homopolar Machine</i> C J Mole	157
<i>Recent Advances in Homopolar Machines</i> J A Satkowski and R W Seng	169
<i>FDX - A Fast Discharge Homopolar Generator</i> W F Weldon, H G Rylander, H H Woodson	183
<i>Copper Graphite Brushes for Very High Current Density</i> R A Marshall	196
<i>Pulsed High Power Brush Research II, Interpretation of Experimental Data</i> I R McNab	201
<i>Moving Contacts in Macro-Particle Accelerators</i> R A Marshall	216
<i>Low Inductance Low Stress Bus Bars for Megamp Currents</i> J W Blamey	231
<i>Homopolar Generator Rotor Configuration and Design</i> E K Inall	251
<u>PULSED POWER SYSTEMS FOR PLASMA MACHINES</u>	
<i>Fast-Discharge Homopolar Generators for Fusion Research</i> K Thomassen	258
<i>The TEXT Energy Storage System</i> W F Weldon, H G Rylander, H H Woodson	281
<i>A Superconducting Ohmic Heating Coil System for TNS (The Next Step)</i> J R Purcell	296
<i>The Design of the Joint European Torus (JET)</i> D L Smart	306
<i>The JET Energy Storage System</i> D L Smart	.319

	PAGE
<i>Pulsed Power Supplies for Large Laser Systems</i> D B Carder, K Freytag, W Gagnon	331
<i>Energy Storage in Capacitors and Batteries</i> G F Brand	342
<i>The Energy Supply and Switching for FUZA Devices</i> I R Jones, E Murray, M G R Phillips, P G Weber	347
 <u>SWITCHES</u>	
<i>Theory of High Current Arc Interruption</i> J J Lowke	354
<i>Vacuum Arc Interrupters</i> S Gilmour	361
<i>A Fast Metallic Contact Closing Switch for the FDX Experiment</i> P Wildi	372
<i>Switching for the Sydney Coaxial Shock Tube</i> A R Collins, B D W James, A R Law	382
<i>Light Activated Silicon Switches</i> O S F Zucker	388
<i>Design and Construction of Electrolytic Resistors</i> J W Blamey	399
<i>Explosively Driven Switches and Fuses for Inductive Storage</i> I M Vitkovitsky, D Conte, R D Ford, W H Lupton	419
<i>Solid State Switches for Fusion Reactors</i> E K Inall	426
 <u>GENERAL TOPICS ON ENERGY STORAGE AND COMPRESSION</u>	
<i>General Considerations of Energy Compression</i> O S F Zucker	435
<i>A Figure of Merit for Various Shapes of Energy Storage Inductor</i> C F Vance	448
 <u>REPORT OF DISCUSSION</u>	
<i>Priorities for Future Research on Energy Storage and Switching and Applications of the Canberra Homopolar Generator</i> Chairman: Dr E A Robson	453
 Initials and Acronyms used in these Proceedings	 465
Author Index	466
Subject Index	468
