

Contents

Series Editor's Preface	xi
Author's Preface	xiii
List of Abbreviations	xv
1 Introduction	
1.1 The role of alternative energy sources in the UK and other developed countries	1
1.2 The role of alternative energy sources in developing countries	3
1.3 World potential of alternative energy sources	7
2 Wind energy	
2.1 Historical introduction	9
2.2 The wind and its characteristics	12
2.3 Simple aerodynamic theory of windmills	19
2.4 Machine design options	24
2.5 Materials for wind turbines	32
2.6 Advanced concepts	33
2.7 Wakes and clusters	34
2.8 Environmental effects and siting	38
2.9 Offshore siting of wind turbines	40
2.10 Resource	45
2.11 Economics	47
2.12 World R and D in wind energy	49
3 Energy from the sea	
3.1 Wave energy	68
3.2 Ocean thermal energy conversion (OTEC)	120
3.3 Other concepts for obtaining energy from the ocean	140

4 Tidal energy	
4.1 Introduction	152
4.2 Characteristics of the tides	153
4.3 Basic modes of operation of a tidal scheme	153
4.4 Enhancing output by modifying estuarial resonance	161
4.5 Optimisation of single-basin schemes	163
4.6 Turbines	167
4.7 Civil engineering	171
4.8 Assessing the value of tidal schemes	175
4.9 Cost of tidal energy	176
4.10 Environmental effects	176
4.11 Studies of the operation and potential of major tidal schemes	177
4.12 Other possible tidal sites	195
5 Geothermal energy	
5.1 Introduction	202
5.2 Geothermal energy from aquifers	205
5.3 Hot dry rock (HDR) technology	227
5.4 Possible future developments	244
6 Solar energy	
6.1 Introduction	249
6.2 The characteristics of solar radiation	249
6.3 Radiation data for the UK and other countries	251
6.4 Problems in utilising terrestrial solar energy for centralised electricity generation in the UK	254
6.5 Photovoltaic conversion	256
6.6 Photogalvanic systems	276
6.7 Satellite solar power stations	279
6.8 Solar thermal generation	281
6.9 The solar chimney	291
6.10 Solar ponds	293
Concluding remarks	299
Index	301
